STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Good progress has been made in accommodating the country to the changed financial conditions, this, too, with strikingly little friction, considering the scarcity of currency and the widespread substitution of credit instruments for actual cash. At the same time wholesale and jobbing trade has quieted down very perceptibly, and the disposition in industrial lines has been to curtail production wherever possible, the aim being to avoid unnecessary or possibly burdensome accumulations of stocks. There is, in fact, a rather more optimistic tone prevailing this week than last, the outgrowth of the better feeling at the east, the large arrivals of gold from Europe, and the idea that basic conditions, both as regards the purchasing power of the people and the absence of large stocks, are better than in some preceding years of stress. There are, it is true, increasing evidences that the level of commodity prices has been forced unreasonably high and that the process of readjustment will compel numerous revisions. In this respect the easing of iron and other metal prices, the further decline in cereals, and the sharp falling off in live-stock quotations are taken as earnest of revisions in other lines yet to come. From two sections—the northwest and the south—complaints are numerous that the absence of actual cash prevents the movement of wheat and cotton to market; but the country-wide issuance of bank and corporation checks in small denominations has eased the currency situation greatly, the domestic exchange markets are much more settled, and the general acceptance of credit instruments is expected to allow of necessary business being done, pending the readjustment of the volume of business to the supply of current capital. Collections are rather slower, but there has been a slight easing in the premium for actual currency at the east, the runs on the various financial concerns are apparently a thing of the past, failures are not so important as in either of the preceding two weeks, and the wave of distrust has perceptibly subsided, rendering the work of rehabilitation and repair a matter only of time.

Retail trading for actual cash has been perhaps the most active feature in distributive lines this week, where quiet has very generally ruled, though stimulated in some sections by slightly cooler weather. The continued mildness of the weather has, however, been a bar to the fullest activity, leaving aside the effects on sentiment of the recent financial disturbance and the dislocation of the currency situation. In jobbing lines some reorder trade is noted, but there is also some evidence, in requests that shipments be withheld, that interior buyers and country merchants are inclined to go slowly in stocking up for a while to come. Wholesale lines very generally report a quieting down in the purchases for distant deliveries, though there is evidence that a fair volume of business in holiday goods has been done. In industrial lines there are additional indications of a drawing in or contraction of activities pending a clearer view of the outlook. In the iron trade a number of shutdowns of furnaces are reported, lower wage offers are being made, and the disposition is not to pile up stocks.

The events of the week in financial lines have been largely of a reassuring character. Some imperiled New York City trust companies have been relieved, a large iron and steel manufacturing enterprise has been absorbed by the leading interest and its stock removed from circulation, $21,000,000 of foreign gold has arrived and $23,000,000 more is on its way here. To meet the pressing demand for currency, which has commanded premiums of 3 to 4 per cent., checks of small denomination have been printed in most cities, the same passing current as cash. The result of these measures has been a releasing of hoarded money, which in time must make itself apparent. While there is complaint that banks in a few places have crowded borrowers, there is, on the other hand, abundant testimony to the banking community as a whole keeping its head, and that the interests of borrowers and lenders alike will be conserved.

Stock market sentiment has improved, but speculative operations are discouraged by all conservative interests. There is, however, a great deal of investment buying of stocks in the New York and other markets, mainly in small lots. Wall street feeling was favorably influenced by the settlement whereby the Tennessee Coal pool was relieved of its burden and the property transferred to the control of the United States Steel Corporation. At the end of the week the market is generally steady, with irregular, but in some cases substantial, improvements from last week's quotations.

Unsettlement in financial affairs, weaker cables, less active export buying, and reports that interior mills might shut down because of light receipts from the country, where cash buying of grain had stopped, were all features working for lower prices this week. Prices of nearby futures here and at Chicago fell 5 cents, and cash wheat dropped 4 cents here and at Chicago. Corn dropped 1 cent here and 2 cents at the west, and oats lost 2 cents at Chicago. Provisions weakened steadily despite light hog receipts, on predictions of low-priced hogs this winter. Pork is 25 cents lower and lard is 40 points off.

Something like a deadlock exists in cotton, and price changes are not very extensive, the net change being a slight advance. On the one side there is said to be a very large short interest in December, and on the other there is a claim of a large long interest, which holds the market locally from following the other commodity markets downward. Curiously enough, while the unsettled condition of money matters renders the bull side a rather uncertain one, the same stringency is said to make it impossible to bring cotton here to break the corner. The one new feature of the week was the appointment on Wednesday of a receiver for a large cotton printing works, which caused a sharp break of 13 to 15 points, followed by a further slight decline on Thursday. Spots are 10 points up on the week.

Visible wheat supplies in this country fell off during the month of October, but those in Canada increased over double our loss, the net result being a gain of 3,835,000 bushels in the stock held in America as a whole. Unrevised European stock figures show a gain of 6,600,000 bushels in Europe and afloat therefor, and the total increase in the world's supply in October is, therefore, 10,500,000 bushels. A year ago the world's stock increased 15,300,000 bushels. The total world's supply on November 1, was 144,500,000 bushels as against 163,100,000 bushels a year ago, a decrease of 18,600,000 bushels. United States and Canadian stocks are 6,312,000 bushels smaller than a year ago, while the European supply is 12,300,000 bushels smaller.

Business failures or suspensions in October, as reported to BRADSTREET'S, number 964, with aggregate liabilities of $139,180,481. This is the largest number of failures reported since January, 1907, the heaviest total reported in October for ten years past, and the largest liabilities ever reported in any month. The swollen liabilities were largely due to suspensions of trust companies and banks at New York City and at a few other points, because twenty suspending financial institutions furnish $114,000,000 of liabilities, leaving for the remaining 945 commercial suspensions the comparatively moderate total of $25,000,000 in liabilities. Four-fifths of the country's liabilities in October were furnished by New York City, and three-fifths of all the liabilities were accounted for by suspending trust companies. Some of these banks and trust companies have resumed, the absolute insolvency of some others is not alleged, and that many of them will eventually resume seems probable. There were fewer failures in the northwest and in the territories in October than in October a year ago, and the largest increases in number were in New England and the middle states.

Dry-goods buying is smaller as a whole this week, yarn prices have been weak and lower and arrangements to curtail hard yarn production are discussed. A suspension of a cotton printing concern in Massachusetts has been a depressing feature this week. The wool trade has been quiet but steady, past curtailment helping the market and keeping demand even with production. Shoe orders are moderate. Hides are weaker. Wool is quiet but steady, recent large sales cutting stocks down to low points.

October bank clearings were 30 per cent. larger than those of September and only 5.5 per cent. smaller than in October a year ago. New York City's clearings expanded 35.6 per cent. as compared with September, but fell 12.2 per cent. behind those of October, 1906, while the clearings total at 93 cities outside of New York were 22.4 per cent. larger than those of September, 6.7 per cent. in excess of October, 1906, and by 2.6 per cent. the largest ever reported in any month. Clearings for ten months at 94 cities were 4.7 per cent. smaller than for the like period of 1906, due to a decrease of 12 per cent. at New York, because outside of that city clearings increased 9.6 per cent.

Census returns show the total cotton crop of this year's growth ginned up to November 1 to be 6,167,600 bales, as compared with 6,906,395 bales for 1906 and 6,457,595 for 1905. Up to October 18, 4,407,055 bales of cotton had been ginned, compared with 4,931,621 bales in 1906. Between October 18 and November 1, therefore, 1,760,545 bales were ginned, against 1,974,774 bales in the same two weeks last year.

Preliminary returns to the Department of Agriculture on the production of corn indicate a total yield of 2,553,732,000 bushels, an average of 26 bushels per acre, as compared with a yield of 30.3 bushels per acre in 1906. The general average as to the quality is 82.8 per cent., as compared with 89.9 per cent. last year. Last year's crop was 2,927,416,000 bushels.

Business in the iron and steel markets is practically at a standstill, pending the clearing of the financial situation. Outputs are being reduced all around, and there is absolutely no disposition to pile up stocks. Wage reductions ranging from 5 to 10 per cent. have been announced. Prices on pig iron are lower, Bessemer being down $2 a ton, and it is said that $17—the quotation for No. 2 foundry at Birmingham—could be shaded on a desirable tonnage. Forging billets as well as wire rods and cast-iron pipe are each $1 lower. Steel bars, plates and bar iron are weaker. In some instances buyers of wire products are asking that deliveries be postponed; still, business in that line is good. Ore shipments in October were of record proportions—6,482,654 tons, an increase of 1,401,860 tons over October, 1906. The transfer of the Tennessee Coal & Iron Company to the United States Steel Corporation is destined to impart stability to the industry. Coke is weaker owing to the blowing out of blast furnaces. The leading tinplate producer is said to be operating only 27 per cent. of full capacity. Copper has reacted on realizing in London. Lake and electrolytic brands, which had moved up to 14.50 and 14.37 cents a pound respectively, declined to as low as 14 cents, while electrolytic fell to 13¾ cents per pound.

Bank clearings for the week ending November 7 (a holiday period) aggregate $2,386,732,000, 21 per cent. below last week and 17.8 per cent. under this week last year. Outside of New York exchanges amount to $1,029,384,000, a loss of 12 per cent. from last week and of 6 per cent. from the week last year.

Business failures for the week ending November 7 number 226, against 223 last week, 146 in the like week of 1906, 166 in 1905, 184 in 1904 and 250 in 1903.

Wheat, including flour,. exports from the United States and Canada for the week ending November 7 aggregate 5,459,593 bushels, against 4,792,349 bushels last week, 4,155,811 bushels this week last year and 5,469,645 bushels in 1901. For the first nineteen weeks of the fiscal year the exports are 73,727,408 bushels, against 66,822,372 bushels in 1906-07 and 111,461,131 bushels in 1901-02. Corn exports for the week are 712,501 bushels, against 666,340 bushels last week and 870,924 bushels in 1906. For the fiscal year to date the exports are 18,072,774 bushels, against 15,488,083 bushels in 1906-07.

IN CANADA.

Tight money retards but does not stop fall trade, which is good, all things considered. There is some disposition to curtail industrial development pending a return of easier money. The grain movement from the west is large despite the scarcity of rolling stock, and exports are liberal. Toronto reports good holiday trade, reorder business in winter goods is satisfactory, and shipments to the interior are large. Eastern collections are good, but western payments are slow. Montreal reports money tight and less activity in industrial development. Despite the tendency to look for quieter trade, depression is not expected. Cotton mills are still far behind on orders. The lumber cut in Canada this winter will probably be smaller than a year ago, as stocks are liberal. In Manitoba trade is satisfactory; threshing reports are better than earlier expected; the high price and heavy demand for feed grain helps the farmers, who have good supplies of off grades. Car scarcity is general and collections show no improvement. Failures in Canada for October numbered 148, with liabilities of $1,404,111, increases of respectively 52 and 108 per cent. over October a year ago. Bank clearings for October show a gain of 2 per cent. over October, 1906. Weekly failures number 34, as against 25 last week and 28 in this week a year ago. Weekly bank clearings aggregate $105,020,000, a gain of 36 per cent. over last week and of 8.4 per cent. over this week a year ago.

TRADE REPORTS.

A fair amount of business has been transacted in dry goods and clothing at New York during the week. Suits, dress goods and also cottons were active, though prices for the latter class of goods show further declines, and some cancellations are reported. Cotton yarns continue unsteady, manufacturers being unwilling to place orders while present conditions continue. Prices are lower. Woolens for men's wear are in only fair request. In the clothing trade a fair business is being done, but in connection with the retail dry goods trade generally, it is a notable feature that purchases are made very carefully. Worsted and woolen yarns are in normal demand at firm prices. Raw silk is somewhat cheaper, but manufacturers show no disposition to purchase beyond their needs. In shirts, gloves, neckwear, hosiery and knit goods there has been a slight falling off in demand during the past few days, but prices are not materially changed. On early spring orders manufacturers are busy, but while general conditions are not regarded as being unfavorable, there is a disposition to retrench. Wholesale notions are unchanged. Money is scarce, dealers are buying only from hand to mouth, and collections are slow. Wholesale grocers say the let-up in buying which came in the third week of October continues. There appears to be some improvement in the retail trade, but dealers are only buying stock to replace goods sold. Receipts of butter are light but equal to demand. Eggs

have advanced 1 cent. Cheese is in poor demand and the market is dull. The local live-stock and dressed-meat market remains unchanged; receipts meet the demand, and shipments abroad are only moderate. Flour receivers are showing some willingness to make concessions to jobbers in the effort to make sales. The mills hold some wheat which cost more than present quotations, and are declining offers; consequently, transactions are confined to actual wants. The export of copper continues, but buying for local consumption is of the hand-to-mouth variety. Pig tin is still inactive. Pig iron is quiet, but some demand for old metal developed during the week. Manufacturers of structural steel have sufficient orders on hand to carry them well into next year, but new business is difficult to obtain. Collections are poor and some cancellations of orders have been received. The machinery and electrical trades report a lesser demand and complain of poor collections. Money has been hard to get in all these lines, and considerable pressure is being put on creditors to settle past-due accounts. In the building trade much new work is being talked about, and it is thought that with easier money a number of operations might be started. In the lumber and building material trades conditions at present are unsatisfactory both as to the volume of business done and the outlook for the winter. A steady demand continues in the wholesale paper trade and prices have an upward tendency, but collections are slow.

The following telegrams show trade conditions at the cities mentioned for the week ending November 8:

BOSTON.—Buying of dry goods by both jobbers and retailers is notably confined to the supply of present business needs, and there is a check to the placing of orders, on the prevailing basis of prices, for goods to be needed in the future. Business in dry goods and wearing apparel at retail has been somewhat irregular, being occasionally stimulated by brief spells of seasonable weather and by special advertisements by dealers, but not amounting to the volume anticipated. Sales of select fashionable apparel for women have fallen off. Jobbers of dress goods report business as confined largely to broadcloths. Skirt manufacturers have had a quiet business for weeks past, while suits and cloaks have been in fair demand. The past week has been exceptionally quiet in the leather and shoe markets. Leather remains firm, inasmuch as curtailment of product prevents any serious accumulation. Hides are inactive and not holding their own in face of inattention of buyers. Shoe manufacturers are receiving few large stock orders, but business received is largely in the form of hurry orders to meet drains on stock in current demand; shipments are falling off. The situation in the paper market is characterized in both manufacturing and jobbing circles as generally satisfactory, and prices continue on a steady to firm basis. Only a mild business is being accomplished in paper stock. The indifference of buyers, together with the good supply of many grades, has brought a slightly weaker tone into some departments. In the wholesale coal trade, anthracite is in good demand and in good supply. Bituminous commands good prices for the better grades, stocks still being low. Colder weather is needed to stimulate business in anthracite. In painters' supplies business is fair and prices are firm. In glass stocks are low, as many plants are shut down owing to labor troubles. Turpentine is lower and linseed oil has declined one cent. In the lumber market all lines are quiet, but prices are unchanged. In iron and metals business is dull with the exception of copper which shows more activity. Wholesale liquor dealers report an average business during the past week. Rectified whiskies are in good demand. Collections are a little slow. Leaf tobacco continues firm. The demand for medium-priced goods is quite active. The volume of business during the past week is generally satisfactory to the large dealers. Manufacturers and wholesale confectioners are busy. Orders for the holiday season are large and the general outlook is satisfactory. In furniture, carpets and upholstery business is of fair volume, but collections continue slow. Notwithstanding the reported shortage of the apple crop exports during the current week have been large, and returns from the foreign sales this season have been satisfactory. The flour market has experienced a slow demand and lower prices.

PROVIDENCE.—In the manufacturing jewelry trade business has shown a considerable falling off. A large number of employees have been laid off. In the supply houses connected with this line there is but little business moving. Collections are very slow. Retail trade is reported good generally.

PORTLAND, ME.—A few manufacturers in this state are experiencing trouble with workmen, but generally the men are well employed and many factories are short of help. Retail trade is fair and appears waiting for colder weather. Wholesale business continues as usual at this season of the year. Sardine packing is drawing to a close, with prospects of a successful season as regards profits.

HARTFORD.—Feeling is more optimistic than it was. While there is a shortage of currency, yet it is believed this will be passed without difficulty. Loans that have matured since November 1 have been met with hardly an exception, and the banking business of Hartford, both national and savings, is believed to be in a safe position.

PHILADELPHIA.—Trade is quiet and without special incident in textile circles. New business is very moderate both in wools and yarns Dry-goods jobbers report a fair trade but slow collections, and retail business is not as brisk as it should be. Flour is dull and weak, and while there is a fair demand, consumers are not placing large orders. Chemicals and dyestuffs are very draggy and the market lacks snap. Prices, however, are well maintained. Paints and glass are moving in fair volume and the market rules steady. Lumbermen report a falling off in orders, due to slackness in the building trade, but prices show no change Collections in all lines are reported very slow. Hides and skins are quiet and featureless. Leather is dull; moderate demand; prices stiff. Shoe dealers report a fair amount of business at steady prices. Tobacco purchased in the past to be shipped as required is being ordered out in large quantities, as manufacturers of cigars are very busy; but buyers hold off on new purchases for future wants, taking only what they must have to fill in, calculating that prices will be no higher, and the chances are they may be lower. Liquor distillers are doing little business, scarcity of money and the enforced advance in price of new goods considerably affecting the market. Wholesalers were somewhat active early in the fall, but trade has fallen off, and for the present little is done, though an improvement is looked for shortly for holiday trade. Iron business is light, buying continuing in small lots only. Prices are without change, the seller as well as the buyer manifesting a disposition to await developments. Coal demand is exceptionally good and prices have materially advanced over those prevailing early in the season. Prospects for trade throughout the remainder of the year are most encouraging. The money market is close. Currency is quoted at 2½ to 4 per cent. premium, and its scarcity is causing inconvenience. Bankers are only discounting customers' paper at 6 per cent. and reducing lines where possible. Commercial paper is being sold only through country banks, and prime names are quoted at 7½ to 8 per cent. on moderate sales.

PITTSBURGH.—The pig-iron market is in an unsettled condition and there are practically no transactions. Prices are weaker on all grades of iron, and it is understood Bessemer has been offered as low as $20. Owing to suspended shipments and resales there appears to be plenty of spot iron in the market at the present time, but buyers are holding off, awaiting the trend of events. Finishing mills, as a rule, have business enough ahead of them to insure full operations until the first of the year, and no material change is noticed in the volume of new business being received at this time, but it is not sufficient for continued operations to capacity. Manufacturers are not apprehensive as to the future, feeling assured that underlying conditions are such that there will be a continued good volume of business, though considerably less than for several years past. Coke is weaker owing to the shutting down of some furnaces. Both Bessemer and open-hearth billets are quoted at $28, Pittsburgh, with little demand. Nominal quotations of pig iron for spot delivery at the valley furnaces are as follows: Standard Bessemer, $20; chilled basic, $19; No. 2 foundry, $20, and gray forge, $19. Standard Connellsville furnace coke is quoted at $2.50, and foundry coke, $3.25 to $3.50, at the ovens. While the volume of business in dry goods has not decreased, collections are slower. In shoes the volume of business is in excess of last year, and no noticeable difficulty in collections. Sales of hardware have somewhat decreased. With few exceptions collections are reported slow. In groceries the volume of business is larger than at this time a year ago, and collections remain satisfactory. In structural iron business is about the same as last year. Lately some customers, formerly prompt, have been offering notes. In pipe, nails and heavy hardware the business is in excess of a year ago. No particular complaints to make regarding settlements. In lumber the volume of business is larger than a year ago. Most local dealers report collections satisfactory. One large dealer, however, reports them unsatisfactory. Mine and mill supply houses report a larger volume of business than a year ago. Collections are satisfactory, but with a tendency to take extra time by some customers. Coal miners and shippers report a great increase in orders, and payments are satisfactory. A considerably increased acreage is being developed, and no stoppage in improvements of equipment is looked for. One company is arranging to expend $3,000,000 in this direction during the next year. During the last three days 3,000,000 bushels of coal have been shipped by Ohio river for southern markets.

BUFFALO.—Local trade remains about as reported last week. In financial circles there appears to be some stringency, although not as acute as in the eastern financial centers. Loans are being curtailed, and while some have charged 7 per cent. on discounts, the regular 6 per cent. on loans seems to prevail. Collections in all lines of trade appear to be about normal.

BALTIMORE.—Jobbers of dry goods and notions report a fair volume of business, filling-in orders leading. Spring purchases are on a conservative basis, but an increasing number of new accounts brings business as to orders up to 1906. Knit goods and hosiery lines as well as shoes report a satisfactory week. Wholesale confectioners' sales and orders are in excess of 1906. Real-estate transactions are moderate. Fall business in fertilizers is not as good as in 1906, the season just closed being below expectations. Collections, however, have been good. Manufacturers of paper boxes, including holiday goods, report business under a year ago, the inclination being toward more conservative buying. Straw boards are firm. Collections slow. Jobbing milliners are receiving a good volume of filling-in orders, which are in excess of 1906, with the season just closed one of the best in years and collections good. Lumber is very quiet, yard and manufacturing plants buying only for immediate consumption. Wharf stocks are about the average and prices are unchanged. Building-material dealers report sales light and collections very slow, conditions brought about by the stringency of the money market. Wholesale business in drugs is of satisfactory volume, with collections varied. A decline of 20 cents a barrel is noted in flour, with sales fair. Low prices prevail in turpentine, with the market weak. Stock market sales are confined principally to small lots of the better class of securities. Demand for money is increasing. Currency is scarce and the banks are using their Clearing House certificates. While some trades report collections at large as fairly satisfactory, the receipts from this source have not been as large as anticipated early in October. Grain shipments have shown an increase, but large stocks are still in elevators awaiting a betterment of financial conditions.

CINCINNATI.—Mercantile affairs are inactive, but an improvement is looked for within a few days. Groceries are steady and in fair demand. Whiskey is firm in price, but less active, Collections are slow. The system of cashiers' checks adopted by the local banks, through the Clearing House, were put in service November 6. All of the fourteen banks holding membership in the Clearing House have issued them, and merchants and manufacturers have expressed willingness to accept the face value, and change will be made for them just the same as for other bills. These checks will greatly relieve the situation as far as small currency is concerned. The money market has eased, and currency is easier than it has been for some time. The reported favorable condition in New York has encouraged local banks, and a number of good loans were made. Exchange on New York among the banks is given at 25 cents discount, while trade can secure same at par. No serious trouble is expected. The banks are retaining all currency possible, but this is a precautionary measure only. A regular rate of 6 per cent. on commercial loans with A1 security is quoted by nearly all institutions.

CHICAGO.—Buying of merchandise from wholesalers and retailers has been curtailed by the scarcity of currency and the uncertainty prevailing in regard to the handling of checks. Wholesalers have made large sales of holiday goods, and most of them have been shipped, but business with distributors has slackened. Manufacturers are reducing their output and are laying off help. A conservative estimate makes the reduction 5 to 10 per cent. in the past four weeks, and 30 to 40 per cent. in six months. The general impression among bankers and business men who have given thought to industrial conditions is that a liquidating period is on, which will eventually extend to all lines and that labor will be the last to liquidate. Reduced production and less new buying is a feature of the iron trade. Pig iron is selling slowly and the market is easy. Coal is moving freely. Trade in lumber is the lightest at this time in recent years, and prices are easy. The railroad situation has improved as to the supply of cars, and there is no congestion. Butter sold lower early but reacted, other lines of product show little change. All live stock is lower, despite small receipts. Banking conditions in Chicago have improved slightly. One leading banker says the currency famine is over so far as Chicago goes, but investigations among wholesale and retail houses show a scarcity of currency, and difficulty is experienced in meeting their pay rolls. Some of the institutions who usually have a large supply of currency are paying part of their help in checks, and one instance is noticed where a department store pays out part of the money in checks in making change for customers. Banks are shipping small lots of currency to country bankers where it is absolutely necessary to facilitate business, and have gained slightly in currency during the past week. But at a meeting of the Clearing House Association Wednesday it was decided to issue scrip in small denominations in case of emergency. Grain interests are receiving favors in the way of loans, the disposition of banks being to buy exchange from grain shippers to enable them to move grain out of the country as fast as possible. Foreign exchange is erratic, but slightly better than a week ago, and New York exchange sold at par to $1.25 premium between banks. There is no business in commercial paper. Money is nominally 7 per cent. on call and 7 to 7½ per cent. on time, with discounts out of the question.

CLEVELAND.—Jobbers report collections fairly good, and the volume of current business is quite well maintained. The iron market continues quiet, manufacturers are operating along conservative lines, shipments being largely confined to filling previous orders and current requirements. Collections are slow. Iron ore receipts continue large and the total shipments from the mines will exceed those of last year.

PEORIA.—Wholesale and retail trade is somewhat quiet and collections are slow. Banks are issuing Clearing House certificates, and currency is therefore not easily available, but conditions in general are satisfactory. There have been no runs on any of the banks and but few notices of withdrawal. No failures of any kind have occurred in the last two months.

EVANSVILLE.—The financial stringency continues to affect marketing of farm products. A number of the large flour mills have ceased buying grain and are running on their reserve stocks entirely. The cotton mills report few new orders, but they are still busy on their season's work. One of the woolen mills has shut down on account of lack of inquiry and because of the present stringency. The window-glass plants, while they have started their fires, are not blowing glass, the market being very low. The bottle factories claim a liberal supply of orders at good prices. Furniture and stove foundry interests are being affected by a scarcity of new business; however, they are all seemingly busy with the season's bookings, but report collections only fair. In most instances collections for October this year are from 5 to 10 per cent. less than in October, 1906. The factory pay rolls were met in currency Saturday, but this is returning very slowly to the banks, and there is some hesitancy as to whether pay rolls will be continued in currency.

TERRE HAUTE.—The banking institutions of this city and vicinity have maintained an attitude which reflects credit on the various managements. Withdrawals were comparatively small and were easily offset by deposits. While practically no loans of consequence are being made, bankers are protecting depositors to the extent of their balances, having established no withdrawal limit, and in occasional instances where needs are urgent accommodations of small proportions are extended. No loans have been recalled and arrangements have been made with manufacturers, coal operators and railroads to supply them with cash to meet forthcoming pay rolls, involving approximately $500,000. General business conditions are more or less stagnant.

INDIANAPOLIS.—The business community has accommodated itself to the stringent money market

conditions, and it is the general opinion that the situation is getting easier. Banks of Indiana report more currency on hand than they had a week ago. Mercantile houses report a slight decrease in the volume of business, although trade is not considered weak. Collections show a tendency in some lines to slow up, but on the whole they are satisfactory. Banks report but few renewals asked, although demand for money remains strong. On account of the early frosts, packers and canners of northern Indiana report heavy losses on the tomato crop, but conditions in the southern part of the state are satisfactory. Failures for the week are normal, and consequently losses are small.

LOUISVILLE.—Business for spring is coming in freely. Retail trade is good. Currency is so scarce that while all the national and state banks have enough to supply their customers' needs, all savings banks and trust companies have given their depositors notice that no money in the savings accounts can be withdrawn without the statutory notice. This is causing considerable inconvenience to poorer people. Banks are calling a large number of loans and getting little returns. A number of the country banks have sent notices to their depositors not to draw checks on their accounts for the next thirty days. This makes collections deplorably slow.

ST. LOUIS.—In dry goods, shoes, hats and kindred lines, a falling off in business is noticeable. However, small filling-in orders are being received. Traveling men are doing but little with spring orders, as country merchants prefer to wait the result of the present money conditions. Collections also show a falling off and are now quoted as only fair. Groceries and drugs seem to keep up to a fair standard, and while business is somewhat slow, in fact below the average of this month last year, there is a feeling of assurance that conditions will improve in the near future. Millers report flour conditions good; they are sold ahead and are busy filling orders now in hand. Export trade has been hampered somewhat by money conditions, but this is regarded as only temporary. Retail traders, especially department stores, are advertising freely in the hope of forcing trade, and under present conditions are meeting with a fair degree of success. Our banks have practically suspended cash payment, although in extreme cases they assist their customers in meeting pay rolls, and also assist some country banks. Three of our banks have issued what they term "Cashier's Checks," in denominations of $1, $5 and $10, and have been paying these checks out over the country as money, and tradesmen generally accept them as money. Other banks and trust companies have issued certified checks at the request of customers in any amounts requested. Several large manufacturing and wholesale establishments have issued their own checks in denominations indicated above, and they pass current in St. Louis without being certified. Our bankers and large merchants generally feel that the worst is now past, and that it is only a matter of moving the crops and getting money into circulation before things are again normal, in other words, they compare the money situation to a man recovering from typhoid fever, the crisis having been passed and the patient gradually improving. The bankers, although having large amounts of money due them on call loans, have made no calls for money since the stringency started, because they feel that such action on their part would only tend to make matters worse. Our local Stock Exchange has practically suspended business. New York exchange has sold as high as $6 per thousand, something unknown of in the history of the city. There is little, if any, speculation on currency, and in some cases the banks have furnished some currency for the handling of cotton and wheat.

KANSAS CITY.—Trade conditions, which were slightly disturbed last week by the local banks limiting withdrawals, have about reached a normal state. Trade in leading wholesale lines is good, and collections are better than a year ago at this time. Retail trade is good. There has been practically no suspension of construction work. Money is in good demand, but practically no new loans are being made, and good loans are being renewed at 6½ to 8 per cent. Exchange on New York is quoted at 75 cents to $1P.

MILWAUKEE.—Trade is good, considering the existing financial situation. Collections are still somewhat affected by the scarcity of currency. The volume of financial business is moderate and demand for loans is nominal. Rates are quoted at 7 per cent. for call, time or discount. Exchange on New York, 50 cents to $1P. A better feeling prevails, due to encouraging reports from the east, and banks are working in unison to relieve present conditions.

SIOUX CITY.—The banks are paying out only small sums. Retail trade is quiet. Some cancellations of future orders have been sent to eastern markets. Line elevators are buying no grain, and this affects retail trade at the smaller points. Cattle and hog receipts in cars have fallen off about one-fourth. Collections are fair.

DAVENPORT.—Trade is good, considering the general condition of the money market. Traveling men representing lines not necessities report orders few and small. Grain companies report things almost at a standstill, especially in the country districts, where farmers insist on cash. A check which must be deposited does not satisfy. Only a few Clearing House certificates and cashiers' checks have been issued. Sixty-day notices of withdrawal are few. Collections are fair.

ST. PAUL.—There has been an appreciable letting up of business in nearly all lines. Salesmen find it hard to induce country merchants to place their usual orders. They want to wait and see what happens. Collections, too, are not what was looked for a month ago, but are fairly good under present circumstances. Goods commanding high discounts are drawing the money. A lull is expected soon, when practically no money will be received until arrangements are perfected for moving grain. While there is a tendency to believe conditions will brighten, there is an undercurrent of anxiety plainly visible. Some authorities predict, however, that within a week currency will resume circulation freely. Normal conditions are not looked for so soon, but are expected to improve gradually. Shipments of gold have been received and strenuous efforts are being made to market grain.

MINNEAPOLIS.—Merchandising business has not been generally affected up to this time by the prevailing financial conditions. Mild weather has had a tendency to restrict the movement of seasonable goods, but retail trade has been quite satisfactory. The same conditions have affected jobbers somewhat, yet filling-in orders for staples are of good volume. There is a conservative tendency noted in orders for future delivery. Country collections are satisfactory. Purchasing of grain by elevator companies has been practically suspended, yet receipts of wheat have been sufficient to supply flour manufacturers. The latter have had excellent sales, but shipments have been curtailed because of lack of cars.

OMAHA.—Trade in most lines, especially retail, shows a decrease. Retail business needs colder weather. Thus far jobbers have received but few cancellations. Country merchants are quite backward in placing their usual orders. Live-stock shipments are light, and the grain business is very inactive Collections are only fair.

LINCOLN.—Jobbing trade for immediate shipment is fair, but orders for future delivery have declined. Collections are slow.

CHARLESTON.—Retail trade is good. Wholesale dealers report trade and collections slow. Considerable cotton is being held for better prices.

RICHMOND.—In dry goods, notions and kindred lines the season for fall and winter delivery has about closed, and as yet orders for spring goods are nominal. For the season just closed sales show a considerable increase over last year. Orders for spring delivery of shoes, leather and rubber goods about equal those of last year. Orders for produce, building material and a number of miscellaneous lines show a decrease; this is believed partly due to more conservative buying and partly to high prices. The cotton crop in North Carolina being later than usual, marketing has necessarily been late, and this is the principal cause for slow collections in some lines. Local banks have been fully able to supply the needs of their regular customers. Collections generally, which are fair, are as good as at a comparative period of last year.

AUGUSTA.—Business in all lines is quiet, owing to the unsettled condition of the money market. Collections are very slow. Clearing House certificates have been issued by the local banks to relieve the currency shortage with good effect. Very little cotton is moving.

SAVANNAH.—The shortage of currency was relieved on Wednesday last by the issuance of Clearing House certificates, which are being readily accepted. The financial strain in this section appears somewhat relieved, although it is still acute. Filling-in orders are larger than last week's, and an improvement is noted in collections the past few days, but they are not yet up to last year's. Cotton is moving more freely than last week, and factories and banks appear to be able to take care of it. The drop in the price of naval stores product has been productive of a lull in that market. Retail business is active, due to seasonable weather.

ATLANTA.—Business does not seem to be materially affected by the money stringency. Most houses report collections better than anticipated. The Clearing House has issued $2,000,000 in certificates, which are being accepted freely by the trade.

MACON.—Trade is unsettled by the money stringency. Collections are fair.

JACKSONVILLE.—Thus far Clearing House certificates have not been substituted for currency, but banks are restricting loans. Merchants are withholding orders for spring goods, believing that a drop in prices is imminent. Collections are slow.

BIRMINGHAM.—Iron and coal markets are firm. Jobbers report doing about the usual volume of trade, though collections are only fair. Local banks have restricted withdrawals to $25 per week.

MOBILE.—Jobbers report spot orders very slow, with practically no future business. Money is tight and collections are very backward, owing to the inability of country merchants to realize on cotton. Timbermen are also unable to realize on holdings.

MONTGOMERY.—Trade in all lines is very quiet. Collections are poor.

CHATTANOOGA.—Owing to favorable weather, trade, wholesale and retail, is fair. Collections range from poor to fair. Building is still active.

MEMPHIS.—Retail trade is good but wholesale is declining. Collections are slow. Scarcity of currency prevents farmers paying cotton pickers. Receipts are falling off. Several Memphis banks arranging to issue cashier's checks to make up pay rolls.

NASHVILLE.—Conservatism among financial institutions is reflected in economical measures adopted by some mercantile houses, and trading in nearly all lines shows some falling off. The recent adoption of the Clearing House certificates is expected to improve the local financial situation. Collections are reported as fairly good, though hardly up to earlier anticipations. Hardwood lumber shows a decline in prices, and sales are less active.

LITTLE ROCK.—The money market stringency has practically demoralized business in some sections, where cotton is the principal source of revenue, and collections are at a standstill.

NEW ORLEANS.—There is a fair volume of retail trade, but jobbers report only a hand-to-mouth business, with backward collections. Crop conditions are excellent, and there is considerable movement of cotton through this port. A shortage of currency has resulted in the Clearing House authorizing the issue of certificates, which are having an appreciable effect in relieving the tension, and prospects appear improved.

DALLAS.—Trade in jobbing lines is quiet, and country merchants are asking that orders for future shipment be held until the financial situation clears. Collections are slow. But little cotton is being offered for sale, and buyers are finding it difficult to finance their purchases. However, financial authorities believe this condition will be removed within a short time.

FORT WORTH.—The public seem to accept conditions more quietly and are adapting affairs to meet present arrangements. Trade in general has fallen off considerably, but confidence is still expressed in the belief that all will be properly adjusted shortly and that trade will resume normal conditions. Reports are that farmers are more anxious now to sell cotton than formerly, but on account of the present scarcity of money the movement is not free.

WACO.—Retail trade is satisfactory, but jobbers are doing a small business. Holding of cotton by farmers and the financial stringency checks buying.

SAN FRANCISCO.—The victory of the good government forces has resulted in a distinct business uplift, despite abnormal financial conditions. Clearing House certificates are circulating freely, and the situation shows improvement. Exchange is still below par.

SEATTLE.—Business interests are becoming accustomed to the change from currency to Clearing House certificates, which were put in force November 4, and it is thought that retail trade will soon resume its customary activity. Jobbers continue to report volume of business up to the average. Collections are only fair.

SPOKANE.—Wholesalers report collections good, with the volume of trade large. Clearing House certificates are circulating freely, and but little inconvenience is noted. Farmers are taking advantage of the favorable weather and are now plowing, their attention being diverted from hauling grain to getting ready for planting. The farmers of the Inland Empire are in fine condition. Even where there were plenty of buyers in the field there was a disposition to hold back selling.

TACOMA.—The Union Pacific Railroad Company has announced its intention of starting its tunnel under this city about December 1. Improvement is noted in collections.

PORTLAND, ORE.—All lines of trade have been materially affected by the prevailing unsettled financial conditions. Collections are slow. No rate for money or exchange is quoted.

TORONTO.—Trade is still good. Good shipments of holiday lines are being made. General business is active. Wholesalers report excellent sorting orders for winter lines. In dry goods, country merchants are reported to be placing better orders than they did last year, and accounts are coming in well. The growing needs of a steadily increasing population keep trade active in all staple lines. Seasonable weather has helped trade. Wholesalers in other lines also report a good business. The demand for groceries is brisk, and large shipments are going to the north and the west. Hardware stocks move well. Large shipments of heavy goods continue to be made by water. Country retail trade is quite brisk. Collections from this and most other parts of the country are satisfactory, but from many districts in the west they continue slow. The percentage of cash discounts or short-time paper asked for points to an excellent movement of goods. Deliveries of produce here continue light, and values are generally firm. Butter and eggs are very firm and expected to further advance. Grain is easier. Ontario buyers have great difficulty in getting cars to move their purchases. The car shortage is causing trouble in many lines of trade here. The hide market is in a depressed state, with trade light. Trade in leather is quiet. There is practically no export cattle being offered here, and prices for all other kinds are firm in tone Wool is quiet.

MONTREAL.—The feature of business is the continued tightness of money. Upon all hands heavy demands for funds are being made and only a small percentage of these are met. As a result there has been some curtailment of industrial development. Manufacturers report a steady demand for their products, and a canvass made here of all branches of trade and commerce reveals the fact that in no branch of Canadian industry is there felt any fears as to future trade. It is said that owing to dear money and to a slightly quieter tone to general trade the volume of business may not continue to show the general steady increase it has done during the past few years, but depression is not looked for. The sorting trade in dry goods is fair. Retail business throughout the country shows a good tone, but merchants are conservative in ordering. Deliveries continue slow in many lines, and it would appear it is in these lines that retailers' stocks are light. Values are firm. Cotton mills will require until next spring to complete the orders they now have on hand, There is already a good business opening in novelties for holiday trade. Hardware men report a good demand for seasonable lines. A good business is opening out in lumbering supplies. This year's cut will not be as heavy as that of last. The supply of lumber now on hand is large. The fall trade in groceries is improving. Values generally hold firm. First shipments of canned vegetables have been received, and prices are high. Country trade is fair. Produce is still slow in coming forward, and values are firm. Collections and remittances are generally fair to good, although from some districts they still leave much to be desired.

VANCOUVER-VICTORIA.—Trade along the coast holds a good tone. Wholesale stocks are moving well, and collections are fair to good. Business in groceries is brisk, with prices firm. Prices of flour and grain are very firm, the former having advanced during the week. This advance was expected, as prices have not kept pace with those in the east. Provincial industries continues busy, and there is still need for more laborers than can be had. Railway extension is going ahead, and there is a good trade in all lines of supplies for the mining and lumbering camps.

WINNIPEG.—Wholesale and retail trade continues satisfactory. The sorting trade is fairly brisk and the demand for all lines compares very favorably with last year. Threshing reports continue very encouraging. The larger portion of

the wheat is grading No. 3 northern or better, which is better than was expected. The heavy demand for feed grain at good prices is materially helping the farmers here. Large quantities of grain are being shipped, but there are not enough cars to take care of all that is offering, and complaints on this score are general. Deliveries of wholesale goods are also affected by this shortage of rolling stock. Collections do not show any great improvement.

FINANCIAL.

Money Market.

In advancing the Bank of England discount rate to 6 per cent. on Monday and to 7 per cent. on Thursday, followed by the marking up of the Bank of France's rate to 4 per cent. and that of the Bank of Germany to 7½ per cent., the European markets have imposed a check upon the depletion of their gold reserves for the aid of this country. It is true that the premium for currency at New York and other cities, which has ranged from 2½ to 3½ per cent. during the week, enabled bankers here to secure some further gold, the engagements for the week footing up $21,000,000, and raising the aggregate species secured abroad since the beginning of the present movement to no less than $44,000,000. Of this sum $21,000,000 was brought in by this week's steamer, the amount including $12,000,000, which came to New York on the Lusitania on Friday. On the other hand, the demand for currency at the interior has been exceedingly heavy, the banks have lost $5,000,000 to the Treasury on this account, while direct shipments have absorbed some $4,500,000. The hoarding of money has continued to be one of the notable and disagreeable features of the situation, although the premium paid for currency has brought out considerable amounts, the dealings in cash through money brokers having been quite active. In the New York loan market time money at the beginning of the week was practically unobtainable, but later on some limited offerings were reported at 10@12 per cent. for ninety days, while twelve months' loans were spoken of as being obtainable at 6@6½ per cent. Call money touched as high as 25 per cent. and as low as 6 per cent, but renewals, while the quotations showed some irregularity, were as a rule at around 15@20 per cent. Very little business has been done in commercial paper, though some outside institutions have bought sparingly, the figures being 7@8 per cent. for double names.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending November 7 shows an aggregate of $2,386,732,000, as against $3,021,488,000 last week and $2,905,510,000 in the corresponding week last year. Canadian clearings for the week aggregate $105,020,000, as against $77,287,000 last week and $96,818,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	November 7	Inc.	Dec.	October 31
New York	$1,357,348,000	....	24.9	$1,845,629,000

New York Banks.

There were several extraordinary features in last Saturday's statement of the New York Clearing House banks. The increase of over $60,000,000 in loans, the decrease of more than $30,000,000 in specie and legal tenders, and the attending gain of $28,000,000 in the deposits, were all the largest variations ever recorded in the respective items, as was also the phenomenal reduction of $37,605,525 in the surplus reserve, making the deficiency below the normal 25 per cent. reserve no less than $38,838,825. Furthermore, the figures were not made public until after twelve o'clock, when the stock market had closed for the day, and, for the first time since Secretary Shaw ruled that national bank depositaries need not keep reserve against government deposits, the statement failed to show the amount of the government money on deposit, the explanation of this course being that it was considered desirable to have the statement agree in form with that used in 1893, during the time of the last issue of Clearing House loan certificates, when the United States deposits were treated the same as ordinary ones. It is pointed out, however, that the percentage of reserves to deposits shown on Saturday is 21.20 per cent., against only 20 per cent. at the worst period in 1893. The increase in loans was held to indicate the extent of the advances made by the associated banks to the institutions which had to be helped through, while the decrease in cash is in part attributable to the same cause, though shipments of money to the interior and withdrawals of deposits for hoarding also doubtless contributed to the result. The increase in deposits of $28,014,900 agrees fairly well with the changes in the other items, and this swelled the reserve requirements by $7,003,725, resulting in the above further remarkable decrease in the surplus reserve, or rather increased deficit in that item. The figures of the statement compare as follows with those of the preceding week:

	Nov. 2	Oct. 25	Changes
Loans	$1,148,452,600	$1,087,711,000	I. $60,741,600

Foreign Exchange.

Great confusion existed all week in exchange rates, and the variations in quotations have been wide and rapid. At times the market was nominal and almost came to a standstill, bankers being unwilling to quote. At the beginning of the week there was a strong demand for cables, which sold up to 4.92 and ruled at around 4.90, while sight sterling went up to 4.88¼. The advance of the Bank of England's rate to 6 per cent. on Monday added to the uncertainty, but did not cause a cessation of gold engagements in London for American account. In fact, approximately $21,000,000 additional specie was secured abroad during the week, making, with the preceding engagements, $44,875,000 in all, of which about $21,000,000 reached New York by this week's steamers. The exchange market on Wednesday exhibited an easier tone on more liberal offerings of commercial bills, especially of drawings against cotton. Cables dropped to 4.87½ and demand bills to 4.86. On Thursday the further advance of the Bank of England's rate to 7 per cent. and the marking up of that of the Bank of France from 3½ to 4 per cent. naturally caused a firmer tone in exchange, cables being quoted at 4.89@4.89½. On Friday the market developed renewed weakness, demand sterling falling to 4.85½ and cables to 4.88¼.

* Holiday.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¼; commercial bills, 4.76@4.78; francs, 5.24⅜@5.20; reichsmarks, 93@94 3-16.

The marking up of the Bank of England's rate on Thursday was accompanied by a very unfavorable statement for the week, the gold holdings of the institution showing a decrease of £3,004,027, while the proportion of reserve was reduced from 39.91 per cent. to 35.20 per cent. There was also an apparent increase of £1,250,000 in the market's borrowings from the banks. The open money market is naturally very firm, call loans having risen to 5 per cent. and discount to 6@7 per cent. The Bank of France reported for the week a loss of 31,125,000 francs in gold, and a decrease of 191,125,000 francs in its loans. The Paris market rate of discount advanced to 4 per cent. in correspondence with the rise in the bank's rate. At Berlin, likewise, discount is quoted firm at 6⅝ per cent., the official bank figure being raised from 5 per cent, to 7½ per cent. on Friday.

New York Securities Market.

From the stock market's point of view, the developments of the week were regarded as reassuring. The further engagements of gold, which bring the aggregate amount obtained abroad up to $44,000,000, and the actual arrival at New York of some $21,000,000 has relieved sentiment in regard to the money market, despite the continuance of high rates for call loans and the practical inability of Wall street to borrow on time. Still the hoarding of money, the scarcity of actual currency, which commanded a premium of as high as 4 per cent. at one time, and the demand for funds at the interior, all tended to maintain conditions in regard to loans which necessarily restricted the stock market and prevented it from exhibiting any decided response to the better aspect of affairs. Moreover, it was recognized that the raising of the rates of discount of the Banks of England, France and Germany, to abnormally high figures indicated plainly that further assistance from abroad cannot be looked for, it being held in fact, that even if this country can bid high for additional gold supplies, further withdrawals from London and the other European centers might create dangerous conditions there which would react upon our own situation. The general feeling in stock market circles, however, is that the positively dangerous features of the financial position have been eliminated, and there was also general satisfaction with the work accomplished by the committees of bankers, whose various steps in the direction of recuperation are detailed elsewhere. The most important of the measures adopted by Mr. Morgan and his colleagues, were the bringing of adequate support to the Trust Company of America and the Lincoln Trust Company, thus practically checking the runs on those institutions, and the deal whereby the United States Steel Corporation acquires the stock of the Tennessee Coal & Iron Company in exchange for its own 5 per cent. second sinking fund bonds, of which it had $30,000,000 free in its treasury. This step ended all danger from the position of the so-called pool, which had manipulated the price of Tennessee Coal to a dangerous height, and permitted a readjustment of loans based upon that security without incurring the peril of a decided break in quotations. Moreover, there is little dissent from the idea that the United States Steel Corporation has acquired a decidedly valuable auxiliary on very favorable terms. The immediate influence of this announcement, which awaited the street on Wednesday, after Election Day, was to cause an exhibition of strength in the Steel shares,

but later in the week sales of the Steel bonds received in exchange for Tennessee Coal stock caused them to fall to 80, with a weakening effect on the Steel stocks. It is also to be noted that the nominal quotation of 135 for Tennessee Coal gave place to from 103 to 95, which represented the adjustment of the market value of the security to the terms of the exchange. The market on Friday was irregular, but showed, on the whole, a general improvement from the quotations at the end of the preceding week.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

	Price		Sales

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*Nov. 1,* 1907	*Oct. 25,* 1907	*Nov. 2,* 1906
American	2,369,805	2,206,839	2,522,281
Other kinds	766,876	780,876	758,000
Total	3,136,681	2,987,715	3,280,281

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Nov. 1, 1907	*Oct. 25,* 1907	*Nov. 2,* 1906
Great Britain and continent	1,669,000	1,514,000	1,495,000
Egypt	133,000	104,000	119,000
India	312,000	327,000	344,000
United States	1,023,000	1,043,000	1,322,000
Total	3,137,000	2,988,000	3,280,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last year*
Week	454,043	581,152
Season	3,000,930	4,028,014

	1907	1906
Week ending November 2	$12,653,728	$11,134,733
Previously reported	523,151,368	514,220,386
Total	535,805,096	525,355,119

Wool Markets.

Prevailing conditions in financial and trade circles restrict trading in wool market, but the main factor in the quiet tone is the small stock of staple wools. A fair amount of business was done, however, with most of the interest centered in clothing grades, many of the smaller mills being obliged to enter the market for moderate lots for immediate use. The bulk of the clip has been disposed of already, and the trade, as a whole, is in a very strong position, so that they may well afford to wait for their asking price for the remaining stock. Territory wools have moved fairly well, a moderate amount of Montana in the original bags selling at 26 cents for half bloods and fine wools. Idaho staple sold in a small way at 25 cents, and fine medium Utah at 20@22 cents. Scoured territories have been moved at about 68 cents for fine, 65 cents for fine medium and 60 cents for medium. The scarcity of money will probably lead to the consignment of the new fall wools from Texas and California, some of the former having already arrived in Boston and sold at 18@22 cents, the market being practically bare of twelve and eight months wool. California wools are dull, choice northern being quotable at 26½@27½ cents, with middle counties at 20@22 cents. Fleece wools have been in moderate demand at 31@31½ cents for Ohio quarter bloods and 30@30½ cents for Michigan quarters. Fine washed fleeces sold during the week at 34@35 cents for XX Ohio, fine unwashed at 27@28 cents and unmerchantable at 29@30 cents. Fine washed delaines are very well sold up at 38½@39 cents, with unwashed delaine and unmerchantable at 31@33 cents. Pulled wools are moving in a moderate way, the bulk of the demand being for fine As and combing wools. In Australia markets are very strong, with German and French buyers taking wool freely at full prices, but Americans have done very little thus far, except for manufacturers' accounts. The drought in the Riverina district is expected to aid in maintaining prices in the Boston market for Australian wool, and the wool is reported to be tender and of shorter staple than usual. The next London sale will open November 26, and will probably include many of the new wools, especially from Queensland and Sydney. Cables say that there is likely to be a scarcity of wools suitable for this country throughout next year's London sales.

Boston Shoe and Leather Market.

Sales of shoe leather, though moderate, are sufficient to take care of current receipts. Tanners of both upper and sole leather have been curtailing production until it is safe to say that in the aggregate sales are just about keeping pace with production. This method has prevented any general accumulation of stocks, and, as a whole, leather dealers are apparently in an exceptionally good position to withstand a period of dull trade. While the market is broadening to some extent, it is still the general report that business for the past week was unusually quiet. Shoe manufacturers are taking leather only as fast as they can cut it from week to week. Jobbers are as yet not placing so large or so many orders for next season as anticipated, but confine themselves in the main to such lines of goods as are wanted in the current trade. Some factories have been favored with more liberal treatment, but it is evident that the situation is not clear for a great many concerns so far as business on spring goods is concerned. While hopeful of a good season, it begins to look as if the coming season, like the one just passed, would be a short one. Following is given the *Shoe and Leather Reporter's* statistics showing comparison of shipments of boots and shoes from or through Boston freight terminals: Last week, 89,711 cases; preceding week, 98,264; last year, 96,099; total for 1907, 4,135,703; total for 1906, 4,381,659; decrease, 245,956.

GROWTH OF TEXAS.

Governor Campbell has compiled statistics showing the growth of Texas in various lines during the last twenty-two years. He says: "In 1885 the population of Texas was about 2,000,000; now it is more than 4,000,000. Then we had 43,849,576 acres in farms, now 125,807,017 acres; the cotton crop was 1,369,208 bales, last year 4,066,472 bales; the corn crop was 40,000,000 bushels, now 155,800,000 bushels. Wheat, oats, sugar and other farm products have increased in like proportion. In the production of rice Texas leads all states, and rice culture was unknown in Texas in 1885. Then Texas had 4,000 factories, all told; now more than 15,000. From 6,687 miles of railroad the mileage has increased to 12,575 miles, main track, and more than 15,000 miles, including yards and sidings. The individual deposits in the chartered banks in 1885 amounted to $9,184,000; now these deposits aggregate more than $170,000,000.

"Texas is lender of money to-day, and no longer pays tribute to the east for money to move her crops and other products."

Remington

Billing Typewriter

What It Does

It writes your bills with double the speed of the pen.

It writes bill and charge sheet at one writing—no more need for separate charge entries.

It writes at the same time any additional charge or order copies that your system may require.

It adapts itself perfectly to your system or the needs of any business.

It improves system, insures against errors—makes short cuts which were impossible under former methods.

It extends the field of the typewriter to form and tabular work of every kind and description and always with an immense saving of time, labor and expense.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 16, 1907.

It is probable that the coming winter will witness the most notable discussion in many years of questions relating to banking and currency. The materials for such a discussion are at hand in a number of proposals, backed by men of weight and influence, and in the more general recognition of the need of some change in the present laws and administrative arrangements affecting the country's monetary system. The existing material also bids fair to be increased in amount and perhaps enriched by an added variety of suggestions before the time for definite dealing with it arrives. It is fair to presume that considerations of no little interest will be submitted as the result of action taken by Governor Hughes of the great commercial and financial state of New York this week. In a letter addressed to several banking officials of New York City he declares that he deems it both proper and important that at as early a date as possible, and before the meeting of the legislature, opportunity should be afforded for the expression of matured opinion with reference to the improvement of the state's financial legislation. He has therefore requested the bankers selected by him to act as a committee for the purpose of collecting facts, receiving suggestions, and expressing the views which, after due reflection, they may entertain upon the question what, if any, changes are advisable in the laws of the state relating to the incorporation, conduct of business and supervision of banks and trust companies. The committee, which is to consist of A. Barton Hepburn, Edwin S. Marston, Edward W. Sheldon, Algernon S. Frissell, Stephen Baker and Andrew Mills of New York, is asked to submit a report on or before December 15 next.

It may be taken for granted that the plan for supplying credit currency which was embodied in a report adopted by the American Bankers' Association a short time ago will be actively pushed in Congress when that body gets fairly down to work at the next session. The money stringency which has been experienced of late will naturally be made the basis of a plea for changes intended to make the volume of the currency more responsive to the demands of commerce, particularly with the view of securing an ample supply of currency when needed. Of late, also, there has been a revival of the proposition to create a central bank, which was favored by the special currency committee of the New York Chamber of Commerce last year, and which has been suggested as a desirable solution of some of the country's currency difficulties by Lord Avebury. It may be that some project of this nature may be suggested for the consideration of Congress. These and other plans are deserving of careful scrutiny and discussion and should receive them. Every plan for currency improvement should be examined in an unhurried way, without prejudice or prepossession, and the fact that it or something like it has found a place in foreign systems should not prevent its having consideration here.

A sober but assured tone pervaded the address delivered by Secretary of the Treasury Cortelyou on the occasion of the tenth anniversary of the Merchants' Association at New York on Thursday. He said that in the experience through which it had passed recently the country had learned, more fully, perhaps, than heretofore, the value of credit in the business world, and had brought home to it anew the fact that it is a most delicate part of a most delicate mechanism. He urged that hoarded money should be put back into the banks, and that the exactions of bankers and merchants should be proportioned only to actual business necessities. Touching suggested legislation, he said that what we need are better and fewer laws and better enforcement of them. As to legislation regarding the currency, he pointed out that it is one of great concern to every citizen, and should have the fullest and most careful consideration, and must not be hurried. Finally, he left with his hearers the reflection that the country is going forward and not backward, and that we must not allow any temporary setback to stay our progress or our prosperity.

Secretary Root's address in calling the Peace Conference of Central American Republics to order at the opening meeting on Thursday, November 15, was marked by noteworthy candor. He assured the delegates that the people of the United States would be most happy if the states of Central America might move with greater rapidity along the pathway of peaceful and orderly prosperity, which they might at once share and aid. At the same time he pointed out that the task before the conference is no easy one, the agreements looking to the establishment of peace which have hitherto been elaborated, signed and ratified having seemed to be written in water. While disclaiming any attempt to propose a plan for the work of the conference, he ventured the observation that the all-important thing for it to accomplish is to devise in connection with the agreements reached some practical method under which it will be possible to secure the performance of those agreements. The mere declaration of general principles, the Secretary said, the mere agreement upon lines of policy and conduct, will be of little value unless there be definite and practical methods provided by which the responsibility of failing to keep the agreements may be fixed upon some definite person and the public sentiment of Central America be brought to bear to prevent its violation. The conference organized for work by the election of Señor Luis Anderson, Minister of Foreign Affairs of Costa Rica, as permanent president.

While the Bank of France is understood to have supplied some $15,000,000 to the Bank of England within the past fortnight, the authorities of that institution have apparently opposed any withdrawals of gold from Paris for direct transfer to the United States. With the above exception, the strain of filling the requirements for specie caused by the situation here has, therefore, fallen upon the London market. Bankers on both sides of the ocean are, of course, fully alive to the dangers and difficulties which would arise from a continuance of the heavy gold withdrawals from the British capital, and negotiations were accordingly instituted this week between Parisian bankers, the authorities of the Bank of France and financiers at New York to the end that that institution might be induced to part with some $25,000,000 or $30,000,000 of its large gold accumulations for the further relief of the American money market. The jealous manner in which the Bank of France husbands its gold resources, and the entire command which it exercises in such matters over the Paris market, of course rendered the successful conclusion of such an arrangement very difficult, and it is not surprising that Thursday brought an announcement that the negotiations had fallen through. The rejection by the Bank of France of the proposition seems to be based upon unwillingness to violate its settled policy not to discount finance bills or to enter upon foreign arrangements without the guarantee thereof by a foreign government, the latter in this instance being an impossibility.

A conference has been in session at Columbus, Ohio, this week from whose deliberations some suggestions of value looking to the improvement of existing systems of taxation may not unreasonably be expected. This is a national conference on state and local taxation, at which about 250 delegates, appointed by the governors of various states, have been in attendance. The meeting was deemed of sufficient general interest to attract six governors from different parts of the country. One of these, Governor Guild, of Massachusetts, was made the permanent chairman of the conference. In his address he said that, with the possible exception of municipal rule, taxation was the phase of popular government in which the United States had made its most conspicuous failure. He suggested that the time is ripe for a clear understanding among all the commonwealths as to what methods of taxation are and what are not desirable; what among desirable methods are the fairest and most practical, and what taxes should be reserved for national and what for state or for local revenue. Governor Guild held before the conference as a specially desirable aim the endeavor to bring about some measure of uniformity in the laws affecting taxation, a matter in reference to which some pronouncement of interest may perhaps be looked for from the Columbus gathering.

Russia's new Duma—the third—was formally opened on Thursday, November 14, with fewer indications of general interest than attended the inauguration of the work of either of its predecessors. It was even remarked that the picturesque aspects of the delegates in the former gatherings were almost wholly lacking, conventional garb being the rule among the members. In accordance with expectation, M. Khomyakoff, designated as an Octobrist, was elected president, receiving 371 votes on the first ballot. No reference to the constitution was made in the president's address on taking his seat, though he was asked by the Constitutional Democrats to incorporate one. The opening of the Council of the Empire by President Akimoff was devoid of incident. The lower house adjourned until Monday pending the usual audience of the president with the Czar. The only communication thus far received by the Duma from the government is the budget for the coming year. This places the expenditures of the empire for 1908 at $1,257,500,000 and the ordinary receipts at $1,159,000,000. A forecast of M. Stolypin's forthcoming declaration on behalf of the government indicates that the ministry will stand by the main lines of the temporary legislation by decree adopted during the last two years, though recognizing that it has been found imperfect in some details.

COMMODITY PRICES AGAIN TEND DOWNWARD.

As intimated in the last monthly report as to commodity prices, published in BRADSTREET'S, the slight advance shown in the general level of prices in September proved to be only a temporary check to the general downward swing which has been in evidence in a greater or lesser degree since March 1, 1907. For the advance shown in September seasonal changes were largely responsible, but the pronounced downward movement during October reflected the play of a number of causes, all largely groupable under the head of trade reaction. That a general cause of this character was operative is proved alike by the proportions of the decline, by the large number of articles and groups of staples affected, and by the comparatively low level touched by the general index of prices, which is now below any previous monthly record for a year past. Thus eight groups of staples out of thirteen were lower on November 1 than on October 1, 1907; the number of articles declining in October was forty, as opposed to only seventeen advancing, and the decline for the month, which was 1.1 per cent., brings the general price index number compiled by BRADSTREET'S down lower than on the first of any month since October 1, 1906.

The net result of the various movements during the month of October is illustrated by the following table giving the index numbers (totals of prices per pound) at different dates by groups of commodities:

	July 1, 1896	*Nov.* 1, 1906	*Mar.* 1, 1907	*Oct.* 1, 1907	*Nov.* 1, 1907
Breadstuffs	$0.0524	$0.0761	$0.0817	$0.1077	$0.1067
Live stock	.1855	.3155	.3315	.3315	.3195
Provisions	1.3619	2.0077	2.1049	2.0325	2.0096
Fruits	.1210	.2245	.2003	.1707	.1807
Hides and leather	.8250	1.1875	1.1975	1.1950	1.2025
Textiles	1.5799	2.5976	2.7369	2.7767	2.7431
Metals	.3757	.8143	.8466	.6765	.6211
Coal and coke	.0048	.0076	.0080	.0072	.0070
Oils	.2082	.3162	.3428	.3611	.3596
Naval stores	.0402	.1091	.1170	.0895	.0851
Building materials	.0716	.0900	.0906	.0881	.0900
Chem. and drugs	.6607	.7083	.7083	.7029	.7054
Miscellaneous	.2150	.2965	.3632	.3112	.3165
Total	5.7019	8.7509	9.1293	8.8506	8.7468

Fluctuations in the price level in the past fifteen years are shown in the following table, which gives the respective swings from high to low and the reverse thereof, as noted by BRADSTREET'S approximate index number:

Jan. 1, 1892	$8.1382	Feb. 1, 1906	$8.2415
July 1, 1896	5.7019	Mar. 1, 1906	8.2321
Jan. 1, 1897	6.1164	April 1, 1906	8.2987
July 1, 1897	5.8537	May 1, 1906	8.3054
Feb. 1, 1900	8.2307	June 1, 1906	8.3203
June 1, 1901	7.4181	July 1, 1906	8.2835
Dec. 1, 1902	8.1413	Aug. 1, 1906	8.3370
Aug. 1, 1903	7.7473	Sept. 1, 1906	8.4528
Feb. 1, 1904	8.0973	Oct. 1, 1906	8.5580
July 1, 1904	7.6318	Nov 1, 1906	8.7509
Jan. 1, 1905	8.0827	Dec. 1, 1906	8.9023
Feb. 1, 1905	8.0805	Jan. 1, 1907	8.9172
Mar. 1, 1905	8.0976	Feb. 1, 1907	8.9953
April 1, 1905	7.9996	Mar. 1, 1907	9.1293
May 1, 1905	7.9700	April 1, 1907	8.9640
June 1, 1905	7.9073	May 1, 1907	8.9356
July 1, 1905	7.9160	June 1, 1907	8.9901
Aug. 1, 1905	8.1111	July 1, 1907	9.0409
Sept. 1, 1905	8.2795	Aug. 1, 1907	8.9304
Oct. 1, 1905	8.2298	Sept. 1, 1907	8.8297
Nov. 1, 1905	8.2097	Oct. 1, 1907	8.8506
Dec. 1, 1905	8.3014	Nov. 1, 1907	8.7468
Jan. 1, 1906	8.3289		

The approximate index number on November 1, 1907, is shown to have been $8.7468, which, as stated above, is 1.1 per cent. below the October 1 level, and is besides 4 per cent. below the March 1, 1907, level, and is even a fraction of 1 per cent. below the level set on November 1, 1906. Even with these losses, however, the November 1 index number this year is still above the level of any preceding year since the index number was first compiled, and is still 6.2 per cent. higher than the level on February 1, 1900, a comparatively high point for those years.

The detailed table of prices by groups brings out the fact that eight groups out of thirteen are lower than on October 1, 1907, metals leading the decline, with textiles, provisions and live stock next in importance, and with breadstuffs, coal and coke, oils and naval stores all showing smaller decreases. Five groups—dried fruits, leather, building material, chemicals and drugs, and miscellaneous products—show small gains as of November 1, compared with October 1.

The detailed list of products advancing or declining in October will bear study. The advance in wheat and wheat-flour was prolonged until well into October and showed a small gain for the month as a whole, owing to the active export inquiry, but the other breadstuffs very generally declined. Other important gains were in bituminous coal, olive oil, glass (due to restricted production), tobacco and hay. Against this are to be noted declines in nearly all live animals, beef and hog products, butter, many groceries, dried fruits, most raw textiles and some cotton fabrics, pig iron, steel, copper, tin, coke, rubber, cotton seed and cotton-seed oil and turpentine. Following is the October movement shown in detail:

NOVEMBER 1, 1907, COMPARED WITH OCTOBER 1, 1907.

INCREASES.

Wheat	Cheese	Olive oil
Rye	Cranberries	Glass
Flour	Lemons	Caustic soda
Hogs, carcasses	Hides	Tobacco
Eggs	Wool, Australia	Hay
Beef	Bituminous coal	

DECREASES.

Corn	Peas	Pig iron, Bessemer
Oats	Potatoes	Steel billets
Barley	Apples	Silver
Beeves	Raisins	Copper
Sheep, live	Currants	Tin
Hogs, live	Cotton	Connellsville coke
Beef, carcasses	Hemp	Southern coke
Mutton, carcasses	Silk	Cotton-seed oil
Pork	Flax	Turpentine
Lard	Standard sheetings	Brick
Butter	Cotton sheetings, southern	Opium
Coffee	Pig iron, eastern	Rubber
Rice	Pig iron, southern	Cotton seed
Beans		

UNCHANGED.

Horses	Print cloths	Nails
Milk	Ginghams	Yellow pine
Bread	Iron ore	Spruce timber
Bacon	Steel rails	Hemlock timber
Hams	Tinplates	Alum
Mackerel	Steel beams	Bicarbonate soda
Codfish	Lead	Borax
Sugar	Quicksilver	Carbolic acid
Tea	Anthracite coal	Nitric acid
Molasses	Petroleum, crude	Sulphuric acid
Salt	Petroleum, refined	Phosphate rock
Peanuts	Linseed oil	Alcohol
Hemlock leather	Castor oil	Quinine
Union leather	Rosin	Hops
Oak leather	Tar	Paper
Wool, Ohio & Pa.	Lime	Ground bone
Jute		

Compared with a year ago, the following changes are to be noted:

NOVEMBER 1, 1907, COMPARED WITH NOVEMBER 1, 1906.

INCREASES.

Wheat	Rice	Petroleum, crude
Corn	Peas	Petroleum, refined
Oats	Potatoes	Linseed oil
Barley	Cranberries	Castor oil
Rye	Peanuts	Olive oil
Flour	Union leather	Tar
Horses	Oak leather	Nails
Hogs, carcasses	Cotton	Caustic soda
Mutton, carcasses	Wool, O. and Pa.	Alcohol
Milk	Wool, Australian	Opium
Eggs	Silk	Quinine
Beef	Print cloths	Tobacco
Cheese	Standard sheetings	Paper
Tea	Ginghams	Hay
Molasses	Iron ore	Cotton seed
Salt	Steel billets	

DECREASES.

Beeves	Currants	Quicksilver
Sheep, live	Hides	Bituminous coal
Hogs, live	Hemlock leather	Connellsville coke
Beef, carcasses	Hemp	Southern coke
Pork	Jute	Cotton-seed oil
Bacon	Flax	Rosin
Lard	Cotton sheetings, southern	Turpentine
Butter	Pig iron, eastern	Brick
Mackerel	Pig iron, southern	Lime
Coffee	Silver	Yellow pine
Beans	Copper	Spruce timber
Apples	Lead	Borax
Lemons	Tin	Rubber
Raisins		Ground bone

UNCHANGED.

Bread	Tinplates	Bicarbonate soda
Hams	Steel beams	Carbolic acid
Codfish	Anthracite coal	Nitric acid
Sugar	Glass	Sulphuric acid
Pig iron, Bessemer	Hemlock timber	Phosphate rock
Steel rails	Alum	Hops

It will be seen that forty-seven products are higher, while forty-one are lower and eighteen are unchanged, as compared with November 1, 1906.

COMPARATIVE PRICES OF 107 COMMODITIES.

Quotations ruling for standard grades at the low point in 1896, the succeeding high point in 1900, the succeeding low point in 1901, and the generally high records reached since then:

OKLAHOMA, THE FORTY-SIXTH STATE.

If a line be drawn along the thirty-sixth parallel from the Atlantic to the Pacific coast of the United States the middle point of it will fall not far from the city of Guthrie, where to-day the people of the newest state will gather to celebrate their entry into the starry sisterhood of the Union. The capital city of Oklahoma is itself not far from the middle of the state, so that, it will be seen, the latter occupies a central location. The new state is formed out of the territories formerly known as Oklahoma and Indian Territory, together with a rectangular strip to the northwest ceded by Texas to the United States in 1850, which passed under the name "No Man's Land" or the "Public Land Strip." The original Indian Territory was formed out of a part of the Louisiana purchase of 1803, and was set apart exclusively for Indians June 30, 1834. In 1866 the United States acquired from the Indians the western part of the territory, which together with the Public Land Strip was organized as the Territory of Oklahoma, May 2, 1890. It had previously been thrown open for settlement April 22, 1889, when Oklahoma Station became a town in a day. The enabling act authorizing the admission of the new state was passed June 16, 1906. The convention to frame a constitution met at Guthrie November 6, 1906, and the constitution there proposed was adopted by the people at an election held on September 18, 1907.

The new state has an area of 70,430 square miles, with a population of about 1,500,000. The western part is described as a rolling plain of from 900 to 2,500 feet elevation, rising to the west, where it forms part of the great plains, while the eastern part is marked by a general slope of land to the southeast. The state is well watered, the principal rivers being the Arkansas, running in a nearly southeasterly direction, and the Cimarron, the Canadian, and on the southern border the Red river, which forms the boundary between the state and Texas. The course of the latter rivers is more nearly easterly than that of the Arkansas. The river valleys are fertile, the climate is mild and generally healthful, and the rainfall is adequate. Both soil and climate are well adapted for agriculture, but the state is rich in a variety of resources. Much of the land affords a fine field for stock raising; fruits and vegetables are raised in abundance, as well as the staples of cotton, corn, wheat, oats and hay. The mineral wealth of the land has scarcely been more than touched as yet, but good coal is found in considerable quantities, and there are deposits of petroleum, natural gas, gypsum, asphaltum, salt, gold, silver, iron, copper, zinc, marble and various kinds of building stone, while there are extensive wooded districts, and a large lumber industry has developed in the southeast.

As illustrative of the agricultural possibilities of the new member of the Union, it may be recalled that in a letter printed in these columns some weeks ago it was pointed out that last year the acreage in corn in Oklahoma (the former territory) alone was 1,998,000 acres, an increase in six years of 103 per cent., while its wheat yield amounted to 18,664,000 bushels, though it raised none till 1893. The Indian Territory raised no wheat till 1901, but last year it produced a yield of 2,890,000 bushels. The opinion was expressed in this communication that the soil within the boundaries of the new state is as good as that of Kansas, and that in a favorable year it may raise as much wheat as Kansas. In manufactures a favorable showing has already been made by the territories composing the new state. In 1905 Oklahoma employed $11,107,763 of capital in manufactures, paying wages amounting to $1,655,324, and turned out a product valued at $16,549,656. In the same year the Indian Territory, with a capital of $5,016,654, paid wages amounting to $1,144,078, and secured an output valued at $7,909,451. The total product then was valued, as will be seen, at over $24,400,000, and without doubt it has increased in the meantime.

One of the noteworthy features of the new state is the provision made for education. It has a fund for the support of a public school system which is valued at $35,000,000. Part of this fund consists of 3,100,875 acres of land located in the former territory of Oklahoma, the rental from which is devoted to defraying the expenses of the schools. This part of the fund is estimated as worth $30,000,000. The rest of it consists of $5,000,000 contributed by the Indian Territory instead of land. The school system comprises not only public, elementary and high schools, but several normal schools, an agricultural and mechanical college, a colored agricultural and normal university, an industrial school for the training of Indians, and several colleges or universities having a general course, including a state university at Norman. The constitution requires the legislature to provide for the compulsory attendance of children between the ages of eight and sixteen years for at least three months in the year, and for the teaching of the elements of agriculture, horticulture, stock feeding and domestic science in the common schools of the state. It is also provided that separate schools for white and colored children shall be established, with like accommodations and with impartial maintenance. Provision is also required to be made for the establishment and support of institutions for the care and education of the deaf, dumb and blind of the state.

THE HARVESTS OF 1907.

With the final measurement by the Bureau of Statistics of the Agricultural Department of the corn, buckwheat, tobacco, potato, rice and flaxseed crops, the work of crop reporting for the year 1907 may be said to have about ended, and the harvest statistics for the leading crops of this year are about complete. The yields per acre or per cent. of the crops and the quality of the yields are given in the following tables:

YIELDS PER ACRE—BUSHELS.

	1907	1906	1905	10-yr av'ge
Corn	26.0	30.3	28.8	25.4
Buckwheat	17.9	18.6	19.2	18.1
Rice	33.1	31.1	28.1	*31.0
Flaxseed	9.0	10.2	11.2	†9.6
Potatoes	95.3	102.2	87.0	85.5
Sweet potatoes	87.5	90.0	92.6	86.4
Tobacco (pounds)	858.3	857.2	815.6	‡785.9

* Four years. † Five years. ‡ Eight years.

YIELDS—PER CENT.

	1907	1906	1905	10-yr av'ge
Apples	32.1	69.1	41.3	52.5
Grapes	78.4	83.3	77.6	80.5
Pears	44.3	74.3	61.8	66.8
Cranberries	78.2	84.8	....	....
Peanuts	83.4	80.3	....	....

QUALITY—PER CENT.

	1907	1906	1905
Corn	82.8	89.9	90.6
Buckwheat	87.3	90.4	93.0
Tobacco	90.0	84.5	87.3
Flaxseed	89.7	92.7	94.6
Potatoes	88.3	90.0	85.4
Sweet potatoes	85.7	87.4	91.3

In addition, it is reported that the condition of sugar cane in October, 1907, was 91.1, as against 79.7 a year ago; that of sugar beets is given at 78.2, as against 84.8 a year ago, and the yield per acre of sorghum is given at 90.8 gallons, as against 95.7 gallons a year ago.

The following table shows for the twenty-five principal corn states the preliminary estimates of total production and of average yield per acre in 1907, with the final estimates of yield per acre for 1906 and the ten-year averages, in bushels:

	Total production, 1907, prelimin'y	Average yield per acre 1907, prelimin'y	1906, final	For 10-yrs
Illinois	342,756,000	36.0	36 1	34.0
Iowa	291,092,000	30.5	39.5	32.5
Nebraska	179,328,000	24.0	34.1	27.7
Missouri	221,526,000	31.0	32.3	28.0
Texas	155,589,000	21.0	22.5	19.0
Kansas	155,142,000	22.1	28.9	22.1
Indiana	168,840,000	36.0	39.6	34.5
Georgia	57,538,000	13.0	12.0	10 6
Ohio	113,903,000	34.6	42.6	34.9
Kentucky	87,392,000	28 2	33 0	26.0
Tennessee	78,364,000	26.0	28.1	22.4
Alabama	45,896,000	15.5	16 0	13.0
North Carolina	45,078,000	16.5	15.3	13.7
Arkansas	40,024,000	17.2	23.6	18.8
Mississippi	37,111,000	17.0	18.5	15.2
Indian Territory	51,788,000	24.2	33.6	27.2
Oklahoma	58,751,000	24.5	32.9	23.5
South Carolina	29,807,000	15.1	12.2	9.8
South Dakota	45,416,000	25.5	33.5	26.6
Virginia	46,025,000	25.0	24.3	21.3
Louisiana	28,000,000	17.5	17.2	16.8
Minnesota	39,096,000	27.0	33.6	29.4
Michigan	45,270,000	30.1	37.0	32.0
Wisconsin	46,688,000	32.0	41.2	33.6
Pennsylvania	45,922,000	32.5	40.2	34.5
Total	2,553,732,000	26.0	30.3	25.4

Reduced to a quantitative form, the probable results (in bushels) of the leading crops point to the following:

	Probable yields 1907	Actual yields 1906	Record yields and years	
Winter wheat	409,500,000	492,888,000	492,888,000	190[illegible]
Spring wheat	216,067,000	242,372,966	293,185,322	189[illegible]
Total wheat	625,567,000	735,260,966	748,460,218	190[illegible]
Corn	2,553,732,000	2,927,416,091	2,927,416,091	190[illegible]
Oats	741,521,000	964,904,522	987,842,704	190[illegible]
Barley	147,192,000	178,916,484	178,916,484	190[illegible]
Rye	31,566,000	33,374,833	33,630,592	1902
Buckwheat	13,911,000	14,641,937	22,791,839	186[illegible]
Total 6 cereals	4,113,489,000	4,854,514,833	....	..
Flaxseed	25,420,000	25,576,000	28,478,000	190[illegible]
Rice	21,412,000	17,855,000	21,096,038	1904
Potatoes	292,427,000	308,038,382	332,830,300	190[illegible]
Hay *	60,766,000	57,145,959	66,829,612	188[illegible]
Tobacco †	645,213,000	682,429,000	821,023,963	1902

* Tons. † Pounds.

The total aggregate yield of the six leading cereals this year, it will be seen, is 4,113,489,000 bushels, a decrease of 15.2 per cent. from 1906. Oats show the largest percentage of decrease, 23 per cent., followed by barley with 17.4 per cent. decrease, wheat with 15 per cent. decrease, and corn with a loss of 12.7 per cent. Of other food crops, it might be noted that the yield of rice was the largest ever produced, but potatoes fell off 5.2 per cent. from 1906. The hay crop increased 6 per cent. over 1906. Only one third of last year's apple crop is indicated, and pears, grapes and cranberries are all shorter, while the peanut yield is larger. It is also noted that the quality of the corn, buckwheat, Irish potato, flaxseed and sweet potato crops is lower than a year ago, but the quality of the tobacco crop is better.

SAVE THE FORESTS—WHITE PINE.

What would have seemed to be a most remarkable story a generation ago, and one, indeed, which cannot fail to strike many readers to-day with a feeling of surprise, is told in a document issued by the Forestry Bureau. It is that Rev. Edward Everett Hale, the well-known writer, at present chaplain of the Senate, some time ago ordered a set of bookshelves on which a cabinetmaker at first set a price and then asked whether they should be of mahogany or white pine. This incident illustrates the change which has come over the supply of this one time abundant wood. Dr. Hale, commenting upon the change, says that in his own time he has seen the day when "the masts of every vessel that sailed the Seven Seas were made from New England grown pine; while to-day very little white pine is cut in New England big enough to furnish a good-sized spar."

These statements are made the text of a statement by the Forestry Bureau in which it is said that the position which the United States has held as a lumber-producing nation has perhaps been due more to white pine than to any other wood, but that now the lumber of this valuable tree is fast disappearing and is at present as costly as the finest American hardwoods. An idea of the increasing scarcity of white pine timber is given by the New York f. o. b. quotations, on a basis of carload lots. "Uppers" of the best grade cost $97 to $114 a thousand board feet, and the "selects," or next lower grade, cost $79.50 to $99.50. Men who are not yet middle-aged remember the time when these grades could be purchased at $15 to $25 a thousand feet. The present quotations on quartered white oak, which are $75 to $80, offer another basis of comparison which indicates the condition of the market for white pine.

Attention is directed by the forestry experts to the fact that the production of white pine has shifted from New England to the lake states. Michigan was the leading lumber-producing state for twenty years, from 1870 to 1890, with a supremacy based on white pine. In these two decades the cut was 160,000,000,000 of board feet, valued, at the point of production, at not less than $2,000,000,000, or nearly half as much again as the value derived from all the gold fields of California from their discovery in the late 40's until the present. The rich forests of Michigan were once thought inexhaustible and lumbering continued in a most reckless manner for years. Suddenly the people awoke to the fact that the thoughtless destruction of the trees had thrown 6,000,000 of acres on the delinquent tax list—a striking warning of the heavy penalty for wasting the forest resources.

At the present time the best stands of this timber are in scattered sections in Minnesota, New England and parts of Idaho. The species in Idaho is sometimes called silver pine. Some of the country's best white pine is found on the Indian reservations in Minnesota and Wisconsin, and scattered stands are found in the states of Wyoming, Montana, Colorado and one or two other states. At the present rate of cutting, the tree will soon be practically a thing of the past. The stands of this timber in the national forests are declared to be inconsiderable, though it goes without saying that they will be managed with great conservatism by the government. Coming on the heels of Mr. Pinchot's warning of last week about the general timber supply, this outgiving about what was formerly one of the country's most important woods should attract wide attention. The age of prodigality in the use of our natural wealth should be regarded as past, and the country should settle down to a policy of husbanding its resources with care.

FINANCIAL REHABILITATION.

Developments of the present week at New York and other parts of the country confirm the earlier impressions that the situation in the money and securities markets is on the whole slowly mending. It must be admitted, however, that the extension of financial pressure with the scarcity of actual currency has reached interior points, both south and west, with some severity it its manifestations, resulting in an increased resort to Clearing House certificates and to the use at many points of checks for small denominations in order to meet pay-roll requirements and the needs of customary domestic commerce. The premium for actual currency, which was as high as 4 per cent. early in the week at New York, however, tended to decline as the week advanced. The heavy gold engagements made in the past ten days resulted in a continued inflow of yellow metal, and in spite of the 7 per cent. Bank of England rate and of high quotations in the London market, further engagements of specie for American account have been made at that center, the total takings since the movement began now footing up no less than $63,800,000, of which some $35,000,000 has actually been received. There has been no cessation of the efforts on the part of the leading bankers to safeguard the situation, as far as lies within their power, and it is noted that the financiers who have taken the lead in these matters continue to all appearance to discourage any revival of speculative activity in the stock market, while at the same time it is understood that the leaders among them have, as is explained elsewhere, entered upon negotiations which may lead to securing a further considerable amount of gold from Paris, in spite of the practical refusal of the Bank of France to furnish the specie unless the United States government takes part in the transaction.

A record of the principal events of the week which have a bearing upon the financial position is given in the following form:

November 9.—Chicago's gold engagements abroad to date, $7,000,000. Chicago merchants ask that Clearing House checks be issued. New York bank statement shows deficit of $51,924,625 in reserves. Loans are $1,187,316,400, the heaviest ever reported, while cash is $219,794,900, the smallest since December, 1903. Proposition that New York and Philadelphia banks issue interchangeable Clearing House certificates. Currency premium, 2¼@2½ per cent. Austrian Bank advances discount to 6 per cent. Stock market here quiet. Price changes small. Grain market weak. Foreign security markets more cheerful.

November 11.—All available gold in London ($3,000,000) bought for this country. First arrivals of foreign gold at Chicago and Pittsburgh. Out-of-town bankers in New York seeking currency. Shipments west very large. Premiums, 3 to 3½ per cent. American Federation of Labor decides on aggressive campaign for eight-hour day. Switchmen (25,000) ask for higher wages. London stock market firmer. Prices here advance on easier money. Call rates, 12 per cent. No time money offered. Mercantile paper rates nominally 7½ to 10 per cent. Grain markets buoyant. Cotton reflects weather reports, being unsettled. Railroads report falling off in tonnage, especially grain. Stock Exchange at Rome, Italy, closes. Governor Magoon offers to loan $5,000,000 to Cuban banks.

November 12.—Large sales of currency. Premium, 3½ per cent. Money brokers get names of withdrawing depositors from financial concerns. M. C. D. Borden says cotton goods trade is prosperous. Pittsburgh issues small denomination ($1 and $2) currency. Kansas City substitutes Clearing House certificates for "cashiers' checks." Striking coal miners refusing to accept checks last week decide to recede from their position. United States mints working overtime coining gold pieces. Merchants National Bank of Portland, Ore., reported suspended. United States Attorney-General says question of validity of bank scrip has not been submitted to his department. Gold engagements, $2,700,000. War Department will ask for $50,000,000 for fortifications, rivers and harbors. Cotton, wheat and corn weak on heavy selling. Stocks lower. Money 10 per cent. on call. Time money, 12 per cent. for ninety days. Year loans, 6½ per cent. Slight improvement in bond market. Parrott Silver & Copper Company passes dividend. Stock market declines, "coppers" being weakest.

November 13.—Currency demand from interior less urgent; rate, 3½ per cent. Bid of 1¾ per cent. premium on gold leaving Europe November 15. Steamship Oceanic arrives with $8,250,000 in gold. Japan ships gold to United States. Brokers discourage margin dealings. Pittsburgh reported bidding 4 per cent. for currency. New national bank circulation issued November 1 to date, $17,000,000. Total Chicago bank engagements of gold to date, $10,000,000. Smelting works reported working night and day to fill government orders for gold and silver. Fifty-seven pig-iron furnaces reported shut down since October 15. October iron production 2,336,972 tons, largest monthly total ever recorded. Argument on motion to compel E. H. Harriman to answer questions of Interstate Commerce Commission. Ruling rate of call loans, 10 per cent. Time and mercantile loans not offered. Stock market generally slightly lower. Wheat up on active export demand. Chicago Clearing House decides to issue small checks as substitute for currency. Canadian municipal bonds being sold in United States. Treasury Department calls for 10 per cent. of government deposits in New York banks. Governor Hughes appoints committee to recommend revision of state banking laws.

November 14.—Secretary Cortelyou urges confidence and condemns widespread money hoarding. Union Pacific and Southern Pacific railways declare usual dividends. Bank of England makes very strong showing, gaining $15,000,000 in gold. Rate unchanged at 7 per cent. Rumors of gold coming here from Bank of France denied. Stock market weak on liquidation, with irregular declines. Currency premium drops to 3 per cent. maximum. London's fortnightly settlement concluded satisfactorily. Bank of France statement shows loss of $10,000,000 for week. Cotton, wheat and corn markets irregular. Money on call, 15@6. Prevailing rate, 10 per cent. Small offerings of time money at 10@15 per cent. for thirty, sixty or ninety days.

November 15.—Further large gold engagements for day, $4,000,000; to date on this movement, $63,825,000. Large currency shipments to interior. Call money, 12@15. Prevailing rate, 12. Time, small amounts, 10@15, three months. Standard Oil Company declares usual quarterly dividend—10 per cent. London market down; 8 per cent. bank rate reported probable. Public Service Commission asks corporation counsel to condemn west side New York Central franchises. Estimate of 75,000 men laid off in iron and steel industry since stringency began. Committee of New York Central Railroad directors appointed to devise plan for raising funds. New York stock market weak, and many prices strike new lows, claimed due to large loans being closed out. Estimated loss of cash by banks this week, $6,000,000. Northern Pacific Railroad announces improvement work will not stop. Wheat, cotton and corn prices weak. Prices weak at London and Berlin, but firm at Paris. "Curb" stock market weak, with "coppers" selling freely. Rumors of forthcoming large issue ($50,000,000) of Panama canal 2 per cent. bonds as basis for additional national bank circulation. Currency premium, 2½ per cent.

EDITORIAL NOTES.

Among the incidents which furnish eloquent testimony as to the severity of the existing financial crisis is the fact that certain corporations which are in good circumstances and can make decidedly satisfactory showings as to their earnings for the past fiscal year have deemed it proper and conservative to omit or postpone dividend declarations for the time. The American Cotton Oil Company, in deciding to leave the question of a dividend on its common shares in abeyance for the time being, furnishes an example of such conservatism on the part of the managements of large industrial corporations. In the case of the American Cotton Oil Company, there is no question about the ability of the corporation to pay a dividend on its common shares as large as the 2 per cent. which was distributed to the stockholders in December, 1906. In fact, the earnings of the organization for the twelve months ending August 31 were considerably greater than those for the preceding year, the gross profits, after all charges, being $2,367,262, against $1,393,637, while the amount earned upon the common stock, after the payment of the preferred dividends, is no less than $1,750,000, against $780,000 in the preceding year. In other words, this company shows that it earned upward of 8 per cent. on its common stock, against less than 4 per cent. the year before, so that there can be no ground for doubt that when the general financial position improves, a dividend upon the common stock will be forthcoming. At the same time the action of the management in deferring a dividend payment at this time is distinctly commendable, and in the text of the annual report, which appears in full in another part of this issue, the reasons which guided the officers and directors are stated in appropriate and convincing terms.

Quite a radical change has been made in the plans of the New York, New Haven & Hartford Railroad Company for financing its capital requirements. At a meeting of the directors held at the end of last week it was decided to abandon the proposed issue of $43,000,000 of new stock, and instead thereof to offer the stockholders and the owners of the outstanding convertible debentures the right to subscribe at par for $40,000,000 of new fifty-year 6 per cent. debentures, convertible into stock at par at any time after January 15, 1923. Subscriptions for the new bonds will be payable in half-yearly installments of 25 per cent. each from January 15, 1908, to July 15, 1909, the partial payments to carry interest at the rate of 6 per cent., although the subscribers may make complete payment upon any of the installment dates. This change, it may be observed, has been received with considerable favor, not only by interests identified directly with the New Haven and its securities, but by the financial public. It is held that it is good policy on the part of the management to provide for its needs through a 6 per cent. bond, rather than by stock which would call for 8 per cent. annual dividends. Besides this, it is understood that the funds thus provided complete the company's financing for some years to come, and will enable it to carry out the plans for improvements already decided upon. There are, accordingly, not likely to be any further issues of securities, apart from the additional stock which may be put out in exchange for the balance of the Boston & Maine shares, in case the opposition of the state of Massachusetts to the consolidation deal is withdrawn, and the plan is not disapproved by the Interstate Commerce Commission.

In a volume of nearly eight hundred pages, entitled "Commercial Precedents," Mr. Charles Putzel, of the New York Bar, has collected and edited from the columns of the New York *Journal of Commerce and Commercial Bulletin* a large number of replies and decisions upon legal questions arising in the course of modern business. The material is gathered from the files of the journal mentioned for the last quarter of a century, the editor selecting those which are specially applicable to-day. The replies are given in a concise form and, as far as possible, in untechnical language, with references to authorities in cases where the editor deems them necessary. They are arranged in alphabetical order, and are made readily accessible by means of a full table of contents and an index covering over fifty pages. There is also appended a collection of legal business forms. The book is not intended as a legal treatise, but simply as a collection of answers to legal questions, covering a wide range of topics, such as might present themselves in the everyday life of anyone having relations to business. For such persons, particularly in cases where a lawyer cannot be readily consulted, the book would seem to have a field of usefulness of its own, and the arrangement and the titles are such as to render it more easy of consultation than ordinary law books, for the use of which a certain amount of technical knowledge is essential. A few typographical errors in the Latin maxims at the end of the volume seem to have escaped the attention of the proof reader.

While preparations for the meeting of the Central American Peace Conference at Washington were actively under way last week the announcement came by cable that the presidents of three of the republics, namely, Nicaragua, Honduras and Salvador, had met at Amapala, in Honduras, to confer upon the general question. It was reported unofficially that the presidents had reached an agreement and that they would communicate to the delegates to the Washington conference what had been agreed upon at Amapala and would direct them to proceed according to instructions to be given. With this came the further news that the three presidents had decided in favor of holding a peace congress in Central America following the Washington conference. Official announcement of the action taken at Amapala was communicated to President Roosevelt in a dispatch dated November 8 from President Figueroa, of Salvador. The receipt of this dispatch was acknowledged by President Roosevelt in a reply in which the hope was expressed that this fortunate accord might be the prelude to a cordial agreement between the five Central American republics in the conference at Washington, by which future misunderstandings may be averted and the welfare and peace of the several republics be permanently assured.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Telephone Rate—Federal Injunction.

In a case in which the Cumberland Telephone Company applied for an injunction against the State Railroad Commission of Louisiana to restrain that body from fixing certain rates on cable tolls across the Mississippi river, Judge Saunders, sitting in the United States Circuit Court at New Orleans, held that the federal courts had no jurisdiction over the rate.

Aliens' Right to Hold Land.

The constitution of the state of Washington prohibits the ownership of land by aliens except where acquired by inheritance, under mortgage in good faith, or in the ordinary course of collection of debts, and provides in general that conveyances to aliens shall be void. In construing these provisions the Supreme Court of the state held (Abrams vs. The State) that the state may, where lands are conveyed to an alien, have the same declared escheated, but that if the state fails to do this prior to the death of the alien, the right is lost and the property descends to the heirs.

Carrier's Liability—Delay—Cyclone.

In the case of Alabama Great Southern Railroad vs. Elliott et al., decided by the Supreme Court of Alabama, it appeared that a consignment of flour was delivered to a carrier for shipment and was retained four days before being forwarded. Upon the day of its arrival at its destination, at one o'clock P. M., notice of its arrival was sent to the consignee. On the morning of the next day, at one o'clock, a cyclone damaged the goods. The court held that the carrier was liable for the damage, since its negligence resulting in the delay at the place of shipment continued to be an active cause until the consignee had a reasonable time after their arrival within which to remove the goods.

Corporation—"Carrying on Business."

The Kentucky Court of Appeals held, in the case of Commonwealth vs. Chattanooga Implement & Manufacturing Company, that a foreign corporation which appointed an agent in Kentucky to sell its machinery, who neither handled its machinery nor solicited purchases therefor, was not liable under section 571 of the Kentucky statutes for the penalty prescribed for "carrying on business in this state," within the meaning of the statute, and that a foreign corporation which sold and delivered in Kentucky a press that the purchaser failed to pay for, and which it recovered by suit and sold as a second-hand press, was not engaged in "carrying on business in this state," within the meaning of the same section.

Carrier's Liability—Baggage Check.

The Supreme Court of South Carolina held, in the case of Park vs. Southern Railway, that where there was no joint contract between carriers to carry passengers and their baggage, but distinct tickets were bought, and the second carrier, to accommodate a passenger, gave its check for baggage before receiving it from the first carrier, the second carrier, on showing that the baggage was never received, or that it exercised due care in delivering the baggage received, was relieved from liability for its loss. The court further held that a railroad baggage check is not a contract but a receipt, and is, therefore, merely prima facie evidence of a delivery of baggage to the carrier, adding: "There is no law in existence by which a railroad company can be held responsible for baggage which is shown never to have been delivered to it."

Bank—Breach of Trust—Notice.

The Supreme Court of Georgia held, in the case of American National Bank of Macon vs. Fidelity & Deposit Company of Maryland, that if a bank has notice or knowledge that a breach of trust is being committed by the improper withdrawal of funds, it incurs liability, becomes responsible for the wrong done, and may be made to replace the funds which it has been instrumental in diverting. It appeared that the funds alleged to have been diverted and misapplied were the assets of an insolvent corporation, and that the funds had been deposited in the bank by a receiver appointed by an order of another court, which provided that such funds should only be paid out on checks signed by the receiver and countersigned by the judge, of which order and the provisions thereof the bank had knowledge. The court held that the creditors of the corporation to whom the receiver sustained a fiduciary relation would have had the right to enforce the liability incurred by the bank because of having paid out such funds upon checks not countersigned as provided, but that when the creditors or the obligee in a bond given by the receiver for the faithful performance of his duties relating to the funds, upon a breach of trust by the receiver, participated in by the bank, brought suit and recovered judgment against the receiver and the surety on the bond, and the surety paid the judgment, such surety was subrogated to the rights of the creditors to enforce the liability incurred by the bank on account of its participation in the breach of trust by the fiduciary.

City—Ordinance—Dairies—Validity.

Under authority of an act passed by the Louisiana legislature in 1896, the common council of the city of New Orleans adopted an ordinance declaring it to be unlawful for any person to carry on a dairy thereafter within certain designated limits, ordering that all dairies then existing by virtue of any previous ordinance of the city should be removed within a certain time from the promulgation of the ordinance, and imposing a penalty for a violation of the ordinance. The conviction of a person charged with violating this ordinance was affirmed by the Supreme Court of Louisiana in the case of City of New Orleans vs. Murat. The court held that the right and power of the city to prohibit the carrying on of dairies within certain limits therein, when that power was exercised in the interest of public health, could not be doubted; that all property is held subject to the paramount right of the public safety and health, and that the general right of a person to engage in any trade, profession or business is subject to the power inherent in the state to make all rules and regulations respecting the use and enjoyment of property rights necessary for the public health, morals, comfort and safety, and that such regulations do not deprive owners of property without due process of law.

Note—Wagering Contract—Grain.

The New York Court of Appeals held, in the case of Zeller vs. Leiter, that in an action on a promissory note given, as alleged in defense, for a balance on wagering contracts in the grain market, and therefore void under the statute of the state (Illinois) where given, it was reversible error for the trial court to exclude a conversation offered by the defendant as having taken place between the maker and the payee, and tending to show that the latter shared with the former the intention merely to speculate in differences on the market value of grain without any actual delivery thereof. The court said: "In order to establish the existence of a joint intention in the minds of both parties that there should be no actual deliveries of grain in fulfillment of contracts purporting to provide for such deliveries, it was essential to prove the existence of such intention in the mind of each party; and it was perfectly proper to do this first by inquiring of the defendant what his intention was, and then to follow that up if possible by proof of the intention of the other party to the contract. The Illinois authorities involving the construction of the statutes of that state directed against gambling contracts in grain all agree that the intention that there shall be no actual delivery must coexist in the minds of both parties to the contract."

Insolvent Corporation—Receiver—Creditor.

The Supreme Court of Louisiana held, in the case of Dilzell Engineering & Construction Company vs. Lehman et al., that the creditor of an insolvent corporation in the hands of a receiver may bring suit for the corporation against the receiver and also against associates of the receiver in the matter out of which the liability of the receiver has arisen; that while by article 266 of the state constitution the shares of stock of a corporation issued without value received by the corporation are null, the person to whom the stock is thus issued cannot invoke that nullity for the purpose of escaping liability to the corporation for the face value of the stock; that where stock is issued in that manner to one person with the understanding that the issue is for the benefit of several among whom distribution is to be made, all those who participate in such agreement and in pursuance thereof receive a part of the stock are liable to the corporation; that in such a case all the parties to the agreement and who have received the stock may be joined in one suit, and that where all the known assets of an insolvent corporation in the hands of a receiver have been sold and have realized no more than enough to pay costs, a suit by a creditor to bring assets into the corporation for the purpose of satisfying its debts is not premature.

BUSINESS NOTES.

Mineral Production for 1906.

In 1906, for the second time, the total value of the mineral production of the United States exceeded the enormous sum of $1,500,000,000. The exact figures for 1906 are $1,902,505,206, as compared with $1,623,928,720 in 1905, a gain of $278,576,486, or 17.15 per cent. This great increase in the total value of our mineral production is due to gains in both metallic and non-metallic products, the metallic products showing an increase in value from $702,453,101 in 1905 to $886,110,856 in 1906, a gain of $183,657,755, and the non-metallic products showing an increase from $921,075,619 in 1905 to $1,016,194,350 in 1906, a gain of $95,118,731. To these products should be added estimated unspecified products, including molybdenum, bismuth and other minerals, valued at $200,000. As heretofore, iron and coal are our most important mineral products, the value of the iron in 1906 being $505,700,000, and that of the coal, $513,079,809. The fuels increased from $602,257,548 in 1905 to $652,398,476 in 1906, a gain of $50,148,298.

Electric Steel Making.

"Substantial progress is being made in the manufacture of steel by the various electrical processes," says the *Iron Trade Review*. "A plant has been in operation for a couple of months at Voelklingen, Germany, using a modified Kjellin induction furnace, and was lately inspected by a party of German, Belgian and Russian manufacturers. An interesting feature of this plant is that it uses steel from a basic Bessemer converter. As electric steel making has been prosecuted in the United States, steel from the basic open-hearth furnace has been employed. The principle is the same, the primary operation of melting and partly purifying the material being performed by whatever facilities are most readily available. A list compiled several months ago and probably incomplete showed nineteen electric steel plants in operation or being built in various countries, France leading with six plants. The friends of the different electric steel furnaces claim that a product can be made equal to the best crucible steel, and there is no question that the cost of production is less, with current at a favorable price, as crucible steel making is very expensive."

The Iron-Ore Industry in 1906.

The iron industry broke all records in 1906 in the output of ore. The quantity of ore produced was 47,749,728 long tons, valued at $100,597,106. These figures show an increase of 12.28 per cent. in tonnage and of 33.83 per cent. in value over those for 1905. The following table shows the production (in long tons) and value by states:

	Quantity	*Value*
Alabama	3,995,098	$5,128,539
Colorado	14,078	22,525
Connecticut and Massachusetts	31,343	94,129
Georgia	411,230	734,780
Kentucky, Maryland & W. Virginia	46,940	58,175
Michigan	11,822,874	31,145,087
Minnesota	25,364,077	51,799,256
Missouri	80,910	158,109
Montana, Nevada, New Mexico, Utah and Wyoming	792,190	946,551
New Jersey	542,518	1,570,578
New York	1,041,992	2,635,639
North Carolina	56,057	75,638
Ohio	17,384	29,706
Pennsylvania	949,429	1,246,267
Tennessee	870,734	1,307,433
Texas	36,660	36,660
Virginia	828,081	1,579,817
Wisconsin	848,133	2,033,217
Total	47,749,728	100,597,106

Prices of Live Stock Declining.

According to the *Wall Street Journal*, "the prices of live stock at western primary markets are beginning to feel the effects of retrenchment. Chicago being the largest receiver, is among the first to show the decline. J. Ogden Armour is quoted as saying that the price of hogs would probably go to 4 cents a pound at no distant date. The financial stringency which has suddenly depressed prices at western stock yards is simply accelerating a movement which had already begun before this phase of the money market developed. In some respects the Missouri river markets are better indexes of the course of prices than those farther east, because the former are somewhat nearer the sources of supply. Kansas City has a record of prices of cattle and hogs which shows the changes since 1880. The top prices of native steers at Kansas City for October were the highest in twenty-seven years. Cattle of this class in October this year sold at $8.25 a hundred, compared with $5.15 in 1897. The lowest price on record was in 1889, when native Missouri steers sold for $4.62½. The lowest price in October in recent years was $6. The lowest monthly price this year (1907) was in May, when $6.15 was quoted. Top prices of hogs have been much more constant. For the first nine months of this year at Kansas City they ranged between $6.32½ to $7.05. With rare exceptions, such as the scarcity period of 1901 and 1902, the top prices in October have not been above 7 cents, nor below 5 cents a pound on the hoof. A fall to 4 cents a pound would be below the monthly quotations for October of any year, with the exception of 1896, during the last twenty-seven years."

Egypt's Greatest Cotton Crop.

Consul-General L. M. Iddings, of Cairo, in stating that it is always possible on October 1 to tell with reasonable accuracy what the cotton crop of Egypt is for the current agricultural year, gives the returns of this and other products of that country as follows: For 1906-07 the country has produced 6,936,121 cantars (one cantar equals 99.05 pounds), or almost 693,612,100 pounds. This is the heaviest crop Egypt has ever had. Its value is £23,000,000 Egyptian, or $115,000,000. The area planted was 1,500,000 acres—in lower Egypt 1,260,000 acres, and in upper Egypt 240,000 acres. At the export customs in Alexandria values are estimated at about 15 per cent. less than they really are, so that the actual value of the cotton crop of 1906-07 is about $132,250,000; but, in general, reference is made to the figure given by the customs authorities. The cotton crops in Egypt for the last five years have been as follows:

	Pounds	*Value*
1902-03	586,075,100	$73,928,720
1903-04	614,455,100	88,909,000
1904-05	637,612,700	75,029,800
1905-06	604,119,700	85,574,305
1906-07	693,612,100	*115,000,000

* Nearly.

Imports of Tropical Products.

The following table shows the value of the principal tropical and subtropical products brought into the United States in the nine months ending with September, 1907, compared with that of the corresponding months of 1906:

Articles	1906	1907
Barks for quinine	$318,489	$349,094
Cabinet woods	3,076,446	4,139,702
Cocoa, and manufactures of, and chocolate	7,511,984	12,609,235
Coffee	46,677,589	56,059,814
Cork, and manufactures of	2,535,650	3,732,048
Cotton	8,641,264	19,864,065
Dyewoods and extracts	618,820	611,601
Feathers, crude, not dressed	2,775,060	3,564,751
Fibers	26,971,270	32,266,977
Fruits and nuts	21,444,335	27,166,398
Gums	9,832,838	13,611,728
India rubber and gutta percha	36,787,575	40,146,249
Indigo	735,118	1,000,123
Ivory	1,650,219	1,655,343
Licorice root	1,629,861	730,500
Opium, crude and prepared	684,739	1,275,211
Quebracho, extract of	536,883	1,998,647
Rice	3,245,278	3,783,491
Sago, tapioca, etc.	740,601	1,316,071
Silk	39,829,094	53,329,517
Spices	3,468,515	3,502,666
Sponges	434,649	394,604
Sugar and molasses	99,892,253	113,512,889
Tea	9,600,973	10,614,750
Tobacco, and manufactures of	26,112,300	25,607,034
Vanilla beans	908,243	1,442,783
Vegetable oils	9,938,616	12,621,376
Total	366,538,662	446,906,667

Railways Reducing Forces.

The *Railway Age* says: "Many reports have appeared in the daily press to the effect that the railways are discharging large numbers of their employees for the purpose of reducing their expenses. These reports have been exaggerated, and in some instances have been flatly denied by the executives of the railways mentioned, but there is foundation for them in some cases. At this season of the year the roads always reduce the number of employees in their maintenance and construction departments for the obvious reason that construction and maintenance work cannot be carried on so well in cold as in warm weather. Many of the men who have been discharged would have been discharged under normal conditions. Owing, however, to the abnormal financial situation, the roads have postponed many improvements to a more opportune time, and they are therefore laying off a larger number of men than they would under ordinary conditions. While at this season the number of employees in the construction and maintenance departments is usually reduced, the number of trainmen is generally increased in order to handle the traffic which reaches its maximum in the early winter months. However, the financial stringency is tending to reduce the movement of traffic. Consequently, while the roads are not at present materially reducing the number of trainmen, they are not increasing it."

CURRENT BUSINESS NEWS.

Commercial.

According to the *Journal of Commerce*, the fire loss of the United States and Canada for October shows a total of $13,350,250. The following table gives a comparison of the losses by months:

	1907	1906	1905
January	$24,064,900	$17,723,800	$16,378,100
February	10,876,600	18,249,350	25,591,00
March	20,559,700	18,727,750	14,751,400
April	21,925,900	292,501,150	11,901,350
May	16,286,300	16,512,850	12,736,250
June	14,765,000	13,950,650	11,789,800
July	18,240,150	12,428,050	13,175,250
August	20,248,000	9,641,600	11,435,600
September	11,449,400	10,852,550	13,715,250
October	13,350,250	13,872,450	12,267,000
Total, ten months	180,765,300	424,460,200	143,741,000

The following is an estimate of this season's crops in Saskatchewan:

	Crop area, acres	Total yield, bushels	Yield per acre
Wheat	1,847,708	28,042,108	15.17
Oats	772,770	29,167,964	37.74
Barley	60,261	1,903,072	30.08
Flax	85,209	921,043	10.81

The following statement of the probable grading of the wheat crop of the province is thus stated: Nos. 1, 2 and 3 northern, 10,392,657 bushels; Nos. 4 and 5, 7,941,594; No. 6 and feed, 9,707,855.

Following a meeting of officers of many lumber companies in St. Louis Saturday last, the yellow pine men announce that 4 per cent. of the mills in several states will be closed. Only 30 per cent. of the employees will be retained because of the car and money shortage.

Ernesto Danvers, Argentine correspondent of the *Northwestern Miller*, cables: "The wheat crop promises to be a large one. The linseed harvest has begun and is progressing rapidly."

Russell's circular says: "The value of corn for feeding purposes according to the price of hogs is fully 10 cents a bushel below last year. The average price of hogs the past few days has been around $5.05 to $5.25, against quotations of fully $1 higher last year. On the other hand, the price of corn is about 15 cents higher than a year ago, so that taking the decline in the price of hogs and the higher price of corn, there is a difference of 25 cents a bushel against corn as a feeding stuff compared with a year ago. Last year there was an apparent profit of about 20 cents a bushel at this time in feeding hogs, as corn was around 42 cents, and hogs were about $6.25. Now, with corn selling for December at Chicago at around 56 to 57 cents, and hogs $5.25 to about $5, there is apparently no profit in feeding the corn to the hogs, but on the face of the figures it would be more profitable to ship the corn in to market."

Traffic through the "Soo" canals in October is officially reported as follows. The tonnage of materials refers to net weight: East-bound freight through American canal, 4,929,110 tons, through Canadian canal, 2,065,338 tons; west-bound freight through American canal, 1,089,946 tons, through Canadian canal, 331,203 tons; vessel passages through American canal, 1,960, through Canadian canal, 923; registered tonnage through American canal, 4,886,201 tons, through Canadian canal, 1,903,904 tons.

The Kentucky state report for November makes the area of wheat sown 91 per cent. of last year. The yield of corn is placed at 94 per cent.

Spanish olive-oil producers, at a meeting in Madrid Tuesday, adopted a resolution in favor of a state bounty on exports of olive oil.

Foreign and American estimators place the decrease in the world's production of sugar for the crop year 1907-08 at 316,000 tons, out of a total of 14,196,000 tons. This is a change of slightly more than 2 per cent. from the total of 1906-07, when the crop was 14,512,000 tons, compared with 13,951,000 in 1905-06.

The relative position of beet and cane sugar production in the latest three years is indicated in the table below, in which the beet-sugar production of the United States is given separately. The grand total shows the world's production as estimated (in tons):

	1907-08	1906-07	1905-06
Cane sugar	7,196,000	7,361,936	6,733,626
Beet sugar, Europe	6,580,000	6,717,000	6,933,649
Beet sugar, U. S.	420,000	433,010	283,717
Grand total	14,196,000	14,511,946	13,950,992

On Tuesday the Federal Sugar Refining Company announced a reduction of 5 points in prices of refined sugar, making their price for granulated 4.65 net, but other refiners did not announce any change. At New Orleans prices were reduced 10 points, to 4.70, for granulated, and New York refiners were meeting that price at competitive points.

The Standard Oil Company announced Tuesday that Somerset crude oil is now quoted at $1, a cut of 10 cents having been made.

The London *Economist's* index number of average prices of commodities at the opening of November is 2314, comparing with 2457 on October 1. In commenting on the decline, the *Economist* says it was not affected by change in the price of copper.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News*: United Kingdom, France, Spain and Italy—The weather is favorable for seeding, and supplies are liberal. Germany—The recent rains have been beneficial to seedings. Interior stocks are light. Austria-Hungary—The weather continues droughty. This, together with the recent heavy frost, has made the outlook for wheat very unfavorable. Reports, however, state that further seeding will soon be possible. Roumania—The recent rains have improved the outlook, and, as the weather is now mild, seeding will soon be finished. Bulgaria, Turkey—The weather is too dry and seeding is being delayed. Russia—The weather is milder, and the recent rains, although light, were beneficial to seedings. Supplies are light and markets are firm. Australia—Weather conditions continue to show improvement, and the outlook is less apprehensive. Argentine—A Broomhall cable said: Latest advices received are favorable. The market is firm and offerings have been withdrawn. India—The outlook continues very unfavorable, and estimates regarding the exportable surplus of the new crop are 8,000,000 bushels at the extreme. The rice crop promises to be a poor one. Hungary—Latest advices report rains, which are generally beneficial. Spain—Rumors are that there will be a further reduction in the export duty.

The National Association of Credit Men, through its directors in meeting assembled at Indianapolis on November 11, affirmed its implicit faith in the commercial integrity of the nation and in the business principles on which the affairs of the mercantile community are conducted, and adopted the following resolutions: Resolved, That from trustworthy trade and financial information received from every section of the country, the association unhesitatingly declares general business conditions to be fundamentally sound, and believes the present financial disturbance, notwithstanding the stringency of the currency, will be of short duration. Be it further resolved, That the association calls on all its members to support one another in an effort to restore the confidence of the people, so unnecessarily shaken at this moment, and to urge upon everyone the necessity of upholding business interests by depositing their money now, as in the past, in the banks of their respective cities and towns, to the end that it may be used for its legitimate purposes, viz, the carrying on of the vast business of the country. Be it resolved further, That this association pledges every member to do all in his power to restore the confidence of the public at large in the solvency and prosperity of our nation.

Financial.

The dividends of Fall River mills for the fourth quarter of the fiscal year show a disbursement of $911,350 on a capitalization of $25,375,000, or 3.6 per cent. The sum disbursed in the corresponding quarter of 1906 was $381,895.

At a meeting of the central committee of the Imperial Bank of Germany, Friday, November 8, it was resolved to increase the bank's discount rate from 6½ to 7½ per cent. This is the highest rate since the bank was founded, in 1876.

At the annual meeting of the Brooklyn Union Gas Company on Monday the board of directors was reëlected. The annual statement of the company was not given out for publication, and there was no action on dividends.

The Stock Exchange in Rome, Italy, unable to resist the depreciating market, alleged to be due to financial difficulties in the United States, has closed. The Exchange has asked the government for $14,000,000 assistance to be loaned to a syndicate of banks to keep up the credit of the country.

The directors of the Rubber Goods Manufacturing Company have resumed dividends on the common stock, having declared a quarterly dividend of 1 per cent. on the $16,941,700 common stock. It is expected this rate will be continued, which would mean a disbursement of $677,688 in the year. The United States Rubber Company owns practically all the stock of the Rubber Goods Manufacturing Company, so that the dividend on the common stock will be reflected in the earnings of the United States Rubber Company hereafter.

Deposits last Monday in the fifty-five savings banks in New York aggregated $2,000,000. This was $500,000 in excess of the amount usually deposited on a Monday.

The minting of nickel coins in the republic of Colombia has been ordered. The new coins will be 25 per cent. nickel and 75 per cent. copper, and will take the place of the 1, 2 and 5 peso paper bills.

A news item says that it is estimated that during the recent financial stringency New York insurance companies have loaned $8,000,000 on policies, at the usual 5 per cent. rate.

The issues of new capital in Great Britain in October were £8,896,500, which is slightly larger than at any time since 1902. The number of issues was thirty-five, the average for October for ten years having been thirty-one.

The following tabulation, taken from the *Wall Street Journal*, shows the principal short-term obligations, exclusive of equipment trusts, which mature during 1908:

	Amount	Month of maturity
Boston & Maine 5s	$1,000,000	January 15
Boston & Maine 5s	1,000,000	February 15
Boston & Maine 5s	1,000,000	March 15
Chesapeake & Ohio 6s	1,200,000	June 28
Rock Island 4½s	6,000,000	April
Cin., Hamilton & Dayton 4½s	15,000,000	September
Detroit, Toledo & Ironton 5s	5,500,000	December
Mexican Central 5s	9,000,000	September
Missouri Pacific 5s	6,000,000	February 10
Quebec, Montreal & So. 6s	6,000,000	Feb. 6 and 9
St. Louis & San Francisco 4½s	7,013,831	December
Wheeling & Lake Erie 5s	8,000,000	August
Consolidated Gas 6s	5,000,000	August 10
United States Rubber 5s	8,000,000	March 15
Am. Agrl. Chemical 4½s	2,500,000	March
Interborough 4s	15,000,000	May
Underground of London 5s	16,550,000	June
Total	118,763,831	

On Tuesday the directors of the Parrott Silver & Copper Company, a part of the Amalgamated Copper Company, announced that the quarterly dividend of 25 cents per share (2½ per cent.) had been passed.

A New York Stock Exchange membership sold Thursday for $53,000, as compared with $60,000 the last previous transaction, which changed hands last week. This is the lowest price since the autumn of 1903. In October of that year, following the lowest prices during the so-called rich men's panic, there was a sale at $51,250, which represented the low price of that year.

Industrial.

The Hartford *Times* publishes a detailed review of the prevailing industrial conditions in the manufacturing centers of Connecticut. Advices are printed from special correspondents who were asked to report whether many concerns had begun to curtail their output either by laying off a part of their force of employees or by reducing the running time of their plants. The information on the whole is favorable and encouraging except from the brass-goods industry. Although a recession is noticeable in many localities, a great deal of industrial activity still prevails, and a hopeful feeling that the reaction will be temporary and not prolonged or severe obtains among manufacturers.

There was an increase during the month of October in the merchant marine of the United States of nineteen vessels of 67,598 gross tons. Of this total fifty vessels of 13,342 gross tons were launched on the Atlantic and the gulf coasts. On the Pacific coast twenty-seven vessels of 11,778 gross tons and on the Great Lakes eleven vessels of 41,882 gross tons were built.

The products of the clay-working industries of the United States in 1906 were valued at $161,032,722, as against $149,697,188 in 1905, a gain of $11,335,534, or 7.57 per cent. The brick and tile products, the materials that enter most largely into structural and engineering arts, were valued at $129,591,838, making 80.48 per cent. of the total; the value of the pottery, or finer grades of goods, was $31,440,884, or 19.52 per cent. of the total. In 1905 these percentages were 81.35 and 18.65 respectively, and practically the same relative proportions have been maintained by the two great branches of the industry for several years.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

A reduction of 12½ per cent. per ton for puddling iron in the Pittsburgh district was announced Wednesday, it being the date of the bi-monthly adjustment of wages arranged on the selling price of bar iron for the previous two months. It was shown that the iron prices for September and October had averaged $1.70, where in July and August it was $1.80. Bar-iron prices have dropped to $1.50 since November 1, so another cut may be expected two months hence.

During October coke and anthracite furnaces produced the largest tonnage in the history of the country, 2,336,972 tons. This compares with 2,183,487 tons in September and 2,250,410 in August. "Before the month was out thirty blast furnaces had been blown out, and the capacity had declined from 511,397 tons per week on October 1 to 491,436 tons per week on November 1," says the *Iron Age*. "Special inquiries during the past few days show that since the first of the month twenty-one blast furnaces have blown out, whose weekly capacity is estimated at 28,000 tons per week. Six others with a capacity of 5,500 tons per week are preparing to stop. Therefore, from October 1 to the end of this week the rate of production has been cut down 53,500 tons per week, or a little over 10 per cent. While this is a good beginning, it is quite evident that it is not enough and that a very considerable additional restriction will be necessary."

Up to July 1 a total of $48,285,110 out of $79,608,568 appropriated had been spent on the Panama canal. Of this total over $39,000,000 has gone for construction and engineering work.

The f. o. b. New York harbor average price of anthracite in October was $4.84 per ton. The wages of miners will therefore be 6 per cent. above the basis. Last year the average October price was $4 85, and the miners' November wages were 7 per cent. above the basis. The decrease of 1 cent per ton this year caused a decrease of 1 per cent. in wages.

The annual production of petroleum in Roumania has increased since 1898 from 106,000 to nearly 888,000 tons in 1906, and in the first six months of 1907 was 555,000 tons, making Roumania fourth in the list of petroleum.

In an official statement made Thursday on behalf of the New York and New Jersey Metal Trades Association, which usually employs about 12,000 men in New York and New Jersey, it was said that the men are being laid off in the metal-shop trades in large numbers, not only in New York and New Jersey but all over the country.

Railroads.

The resignations of Oakleigh Thorne, of New York, and J. M. Perry were accepted Tuesday at a meeting of the directors of the Central of Georgia Railway. As their successors William Nelson Cromwell and J. W. Castles were elected.

Miscellaneous.

F. E. MacLeod, chairman of the Western Passenger Association, has prepared a statement of the arrivals of steerage passengers at the port of New York during the first eight months of the current year. The figures by months are as follows:

	Aliens	Citizens	Total
January	34,349	625	34,974
February	50,024	880	50,904
March	112,264	1,525	113,789
April	118,717	1,649	120,346
May	146,028	2,325	148,353
June	119,625	1,767	121,392
July	71,627	1,722	73,349
August	70,666	3,689	74,355
Total	723,300	14,182	737,482

As compared with the arrivals last year in a similar period, these totals show an increase of 85,028 aliens and 715 citizens; 85,743 in all, or 13.16 per cent.

A treaty has been signed by the presidents of Nicaragua, Honduras and San Salvador. All pending and past difficulties will be settled. Guatemala and Costa Rica have been invited to join in the agreement. Señor Corea, the Nicaraguan minister, says the treaty will facilitate the work of the Central American peace delegates at Washington.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Trade as a whole is quieter, and industrial operations are being curtailed in accord with the readjustment process forced by the prevailing monetary stringency and the spread of the acute currency scarcity to the country at large. Evidences of this are found in the restriction of wholesale buying for future delivery, in the confinement of jobbing trade to purely filling-in proportions, and in the curtailment of retail buying by the necessary employment of credit instruments. In manufacturing lines there is apparently a determination to fill orders only as they are received and an indisposition to accumulate stocks, the result here being a slowing down of operations pending the settlement of affairs upon a substantial basis. This industrial quieting is also in no small degree due to the fact that manufacturers, unable or unwilling to ask their employees to take pay in credit instruments, chose rather to reduce production to a point where operations can be conducted free from dispute as to the methods of payment employed.

There are, however, some favorable elements which point to the rehabilitation process being well under way. There is, in the first place, an absence of anything like precipitate action in the business community, the first flurry of financial unsettlement has passed without much of the disorganization witnessed in other years, and there has succeeded a steady determination to make the best of a situation which by many is regarded as but temporary and not of a lasting, depressing kind. The situation in the larger financial markets is unquestionably more cheerful, gold arrivals from abroad continue very large, and the security markets display considerable steadiness, despite evident secondary liquidation inseparable from times like these. Urgent demands from the interior early caused an advance of the money premium, but later this demand weakened as the needs of the country were met by large shipments from New York and other centers, the arrival of great quantities of foreign gold, the increase of the volume of national bank circulation, and the growing familiarity of the people of the interior with the new credit instruments. One especially hopeful sign has been the renewal of grain purchases in the northwest, exchange checks on larger interior markets being the medium of transfer, thus allowing of the resumption of grain forwarding and the buying of supplies at retail by the farmer.

As a result, and in keeping with the progress of readjustment, operations in practically all lines of trade and industry have been reduced, forces have been curtailed, and in some instances wages have been cut. Holiday trade has not developed to any extent, and business on spring account is of small proportions, the general desire among merchants being to act very conservatively. In some cases this conservatism has led to the cancellation of orders placed earlier in the season, and a number of houses have called in their traveling salesmen pending a clearing up of the financial situation. Business is still being done on the basis of Clearing House certificates and cashiers' checks. The domestic exchange markets are still unsettled, as the country banks seem to be disposed to build up unusually heavy reserves. Collections are very poor and the banks are not making new loans. Naturally, there is some criticism of the action of many bankers, who are pursuing rather shortsighted methods in withholding accommodations from deserving depositors and borrowers, and there are at the same time unsolicited tributes to the commendable banking methods of others, who extend help where needed and deserved. At some large centers bank deposits are decreasing. Bank clearings show heavy decreases from last year, and the stock market continues inactive. At some points retail trade has slightly improved owing to colder weather, one evidence of this being the cold weather at the south largely terminating the growth of cotton, but business is not by any means as active as it usually is at this season. While little grain or cotton is moving because of the inability of purchasers to do business on a cash basis, it is noteworthy that elevator men are again purchasing grain at northwestern country towns. Some pressure is being brought to bear on holders of grain and cotton on which money has been loaned to market their products, so that gold can be secured in Europe. The rapid closing down of industrial plants, especially those engaged in the iron and steel trades, indicates that stocks will not become burdensome and that production will be adjusted to consumption. On the railways the supply of cars is more abundant, and gross earnings thus far reported for October show an increase of 7.7 per cent. over the like month in 1906. Wheat exports this week are the largest, with one exception, in five years. Failures are the largest in number of any week since January.

New business in all branches of the iron and steel trade is very quiet, and prices tend to seek a lower level; in other words, it is a buyers' market. Southern pig iron, representing resales, has declined to about $16, Birmingham, and Bessemer is quoted at $20 per ton, valley furnaces. The output of pig iron in October was of record proportions, but from the opening of November to date over fifty furnaces have been blown out of blast, and it is figured that operations will be curtailed by at least 30 per cent., though some authorities look for a reduction of 50 per cent. In finished lines producers appear disposed to grant requests for postponed shipments, as they do not want to make deliveries unless fairly prompt payment is forthcoming. Prices on sheets are irregular, and old material is weaker. Bar iron is irregular and some plants have closed down. Coal is lower, owing largely to the money stringency. Coke is inactive and production has been restricted, while prices are about steady. Demand for copper is confined mainly to small lots, and prices are easier. Some argue that the situation has been considerably improved as the results of European purchases and reduced outputs, but others feel that the lower cost of labor and fuel may have some influence on prices.

Stock market sentiment was early inclined to assume a better form in view of the improved financial condition at New York, but this was counteracted by reports of widespread curtailment in the iron and other industries, and by renewed liquidation in leading stocks like St. Paul and the Steel shares, coming apparently from other cities. The favorable Bank of England statement was noted with satisfaction, but the unwillingness of the Bank of France to consent to the shipment of a large block of its gold to New York was unfavorably received. The tone of the market on Friday was heavy and irregular at general concessions in prices. Foreign exchange is very irregular, demand sterling being somewhat firmer at 4.86.50.

Dry-goods buying is of a cautious character. The subject of possible cancellations is a disturbing one, especially as lower prices of some varieties are looked for. The cotton mills are still heavily sold ahead, and there is discussion as to whether a slowing down is not advisable to offset possible curtailment of takings. One large printing concern has filled its requirements of print cloths and has withdrawn from the market. Hard-yarn manufacturers at the south are restricting output. Some knit-goods manufacturers are noting accumulations, due to requests of customers that shipments be withheld.

The wool trade has begun to respond to the conservatism dominating other lines, and a readjustment of prices on a lower scale is noted. The main factor was the weakness reported from Australia, where the French and German buyers have followed the American lead and withdrawn. South American markets are also lower. The wool trade is regarded as being in a strong position financially, while stocks are smaller than a year ago.

Staple prices as a whole resumed in October the downward movement, which was checked in September by seasonal changes and the advent of autumn conditions. There were eight groups of commodities that moved lower, while five advanced in October, and forty articles of general use declined, while only seventeen advanced. BRADSTREET'S approximate index number on November 1, 1907, was $8.7468, a decrease of 1.1 per cent. from October 1, of 4 per cent. from March 1, 1907, and a fraction of 1 per cent. below the level of November 1, 1906, but is 6.2 per cent. higher than the level set on February 1, 1900.

The movement of staple prices this week has been extremely irregular, the financial situation largely dominating, though in wheat the evidences of reawakening demand for export sharply stimulated prices on some days. Wheat fluctuated within a range of 4 cents this week, declining early on less satisfactory outlook for financing movement, rallying on returning confidence, losing slightly again on recurrence of liquidation of the bull position here, at the west and in Europe, and again advancing sharply on Wednesday on large export buying and reports that the railways will break the Buffalo blockade. A large fire at Duluth was a temporary element of strength, 600,000 bushels of wheat being reported destroyed, but a sharp break in coarse grain on Wednesday was a feature hurting prices. Net changes for the week are: Wheat 4 cents up, corn 1 cent off, oats 1 cent up. Provisions were irregular, but tended lower on easier prices for hogs and lower prices for feeding grains. Cotton-seed oil eased 2 cents. Coffee firmed up slightly, but sugar was reduced 20 points.

Cotton was firmer early in the week, but reacted later and is without much change to speak of. Early strengthening features were higher Liverpool advices, larger exports, and snow in the far south. Later, bearish European mill stock statistics from Ellison, placing the aggregates at double those of last year, and reports of slowing down of textile mill operations in New England and New York, were depressing to values.

The leather trades are quiet but are in an excellent condition, because curtailment of production has been in evidence for many months; no accumulations, except possibly of glazed kid, are noted, and some heavy sole leather is actually scarce. Hides are weakening, as tanners neglect them. Shoe manufacturers report numerous small orders by nearly every mail, and the feeling is that they will continue. Shoe outputs are being restricted, and it is expected that they will be about 50 per cent. of normal for a month or two.

Scarcity of ready money is the leading cause for the falling off in demand for both raw and refined sugar this week, resulting in a drop of 10 points in raw and 5 points in refined. Pressure of stocks in this market is absolutely nil, but where the new crop is going into the market, as in Louisiana, the pressure is more marked. In this line, as in others, demand by the government that payments of duties be made in gold instead of certified checks is working hardship to manufacturers who use dutiable goods in their business.

Bank clearings for the week ending November 14 aggregate $2,366,700,000, two-tenths of 1 per cent. below last week (a holiday period) and 27.7 per cent. under this week last year. Outside of New York exchanges amount to $994,186,000, a loss of 2 per cent. from last week and of 19 per cent. from the week last year.

Business failures for the week ending November 14 number 259, against 226 last week, 222 in the like week of 1906, 198 in 1905, 190 in 1904 and 234 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending November 14 aggregate 6,192,944 bushels, against 5,459,593 bushels last week, 3,742,331 bushels this week last year and 4,983,734 bushels in 1901. For the first twenty weeks of the fiscal year the exports are 79,920,352 bushels, against 70,564,703 bushels in 1906-07 and 116,444,865 bushels in 1901-02. Corn exports for the week are 1,133,488 bushels, against 712,501 bushels last week and 1,229,352 bushels in 1906. For the fiscal year to date the exports are 19,206,262 bushels, against 16,717,435 bushels in 1906-07.

IN CANADA.

Canadian trade advices are generally good, owing to the fact that cold weather has stimulated retail trade in heavy winter goods, and the feeling is that a good winter trade will be done, despite the scarcity of money to move crops in the northwest, and the talk of slowing down of industrial operations, predicated upon a possibly quieter demand for the future. Shipments of goods to the country by water have been large. An interesting illustration of the odd conditions ruling in some lines are the reports of the receipt at Montreal of shipments of Irish and Siberian butter. Values generally are well maintained, and Canadian cotton mills are still behind on orders. Canadian failures this week number 45, as against 34 last week and 31 in this week a year ago. Canadian clearings aggregate $92,962,000, a decrease of 11.4 per cent. from last week and of 2.7 per cent. from this week a year ago.

TRADE REPORTS.

Commission and wholesale dry-goods houses in New York are still transacting a very fair volume of business, though trade shows a falling off for the week. Silks and dress goods keep well up, but prices of cotton goods are not so firm, and buyers are very careful as lower prices are expected. Cotton yarns are low and irregular, with demand a little more active. Buyers hesitate in placing large orders. Woolens for men's wear are not in much request, and the clothing trade reports business quiet, with a number of cancellations. Woolen and worsted yarns are high, demand is active and some grades are difficult to get. Business in raw silk has practically ceased, manufacturers of piece goods buying only for actual needs. Prices have fallen off, but further reductions are anticipated. The fur season is very backward, which condition is principally ascribed to the financial situation. Customary bank credits have not been extended to the importer and manufacturer, and there is a general shrinkage in sales, buyers purchasing only what they must have. Many factories are reported shut down because of the difficulty in obtaining money to meet pay rolls. Retail millinery is in a fairly satisfactory condition, and flowers and feathers sell well. In the cloak, suit and waist lines there is a considerable falling off in business. Manufacturers attribute this to the tightness of money. Collections are very slow and buyers conservative. Retail trade is fairly active. Manufacturers of shirts, neckwear and gloves are still busy on orders, but demand has fallen off during the past few days. Jobbers report that early spring orders are of good size, but that money stringency has interfered with deliveries and that there have been some cancellations. Wholesale grocers report trade very quiet, buying being confined to absolute wants, and out-of-town collections are slow. The retail trade is fairly active, and there is some increase in the volume of business. Butter advanced 2 cents on good demand and light receipts. Receipts of fresh eggs are limited, and these have advanced 1 cent. Storage eggs have advanced 2 cents and are moving freely. Cheese is in moderate request at a decline of ½ cent. Flour receivers say the trade is waiting.

The difficulty in financing shipments is keeping flour back, and jobbers are only buying to replace sold out lots. The general wine and liquor business is anything but brisk. Collections are very slow and buying limited to requirements for actual consumption. Nearly all of the spirit houses demand cash, and will not accept even certified checks. This is hard on many jobbers. Whiskey appears to be going more into consumption, but there are large stocks on hand to draw from. Eastern whiskies are in only limited demand, and producers are inclined to reduce their output. In leaf tobacco, business has been very limited, owing not only to the scarcity of money, but also to the high price of goods. For the same reasons the cigar trade is also dull. Some factories have shut down. Business in drugs and chemicals is quiet. Dullness marks the diamond trade, and the business transacted is only of moderate volume. Manufacturers of jewelry, however, report a fairly active business. Anthracite coal is in heavy demand and stocks are not large. Shortness of cars is complained of in the bituminous trade. Copper prices are lower, and business is very quiet. Pig tin is in only limited demand, and pig iron is dull, with production being curtailed. Electrical and machinery manufacturers report business less active. Collections in these lines are poor. In the paper trade the demand continues nearly unchanged, prices remaining firm. In the real estate market during the week there has been a revival of activity in some lines, and an increase is noted in building permits. Complaints of difficulty in obtaining bank accommodation are widely heard, though there are some conspicuous exceptions to this, and the government's action in refusing certified checks offered in payment of revenue stamps is commented on. Some houses are heard of which are paying their bills with their customers' notes indorsed.

The following telegrams show trade conditions at the cities mentioned for the week ending November 15:

BOSTON.—Dry goods jobbing is quieter than ordinarily at this season of the year and rather unsettled. The buying of cotton goods in the primary markets for future wants has practically stopped. Mills and their agents are in some instances soliciting business and offering concessions in prices or terms, but many are sold up ahead under old contracts, and are firm in holding out to insure the compliance with contract terms. There have been some postponements in deliveries, and some acceptances of cancellations of orders as a result of tight money and changed business conditions. The trade generally is expecting lower prices on cotton goods. Both the leather and shoe markets are quiet, transactions in both lines being on the hand-to-mouth basis. Tanners have been curtailing their product for months, and, except in one line, there is no serious accumulations. Prices remain firm. Shoe orders are mainly for early shipment goods to fulfil immediate demands, and shoe manufacturers are admitting that business will continue to come in that manner until the money market clears. Prices hold firm. Denatured alcohol has advanced 3 cents per gallon, and both grain and wood alcohol is in continued good demand. There is a smaller demand for electrical goods, and collecttons are poor. Business in furniture and kindred lines is slowing up, and payments are slower than usual. In the anthracite coal trade business is fair and a good winter business is looked forward to. In bituminous the demand is quiet, but prices are firm. Retail trade light. Builders' supplies, such as drain pipe, cement, lime, etc., are quiet. Bricks are in fair demand. The dullness in pig iron, structural steel and other metals continues without material change. In lumber, business is dull, as, owing to the stringency in the money market, not much building is in progress. Prices remain about the same for all grades. The provision trade is slow. Collections as a rule have averaged well with former years, but packers and large dealers are in many instances shortening their terms of credit.

PROVIDENCE.—There has been a continued falling off in the manufacturing jewelry business during the past week, and the depression is expected to extend over the holidays. Cancellation of orders is reported to a considerable extent. There appears to be a general easing up in business circles in other manufacturing lines, though retail trade is reported good. Collections are slow.

NEW HAVEN.—Depression is beginning to be felt throughout this district, and many factories which have been running night shifts have not only discontinued them, but have shortened the hours of the day employees. The jobbing houses also report a falling off in sales, and collections, as a rule, are reported quite slow.

PORTLAND, ME.—Labor troubles in Maine are being settled and practically all employees have returned to work. The volume of trade, both retail and wholesale, compares favorably with that of previous years. Manufacturers generally have had a good year.

PHILADELPHIA.—Wool continues quiet, with stocks low and demand light and manufacturers buying only for immediate needs. The cotton-yarn situation shows little or no improvement, values are rather uncertain, and in certain lines, notably knit goods, manufacturers are accumulating goods because of orders from customers delaying shipments. Dry-goods jobbers report trade as rather draggy, with collections fair to slow. Prominent retailers claim sales exceed those of last year, but with the majority it is thought trade is not as large as it might be. Flour is dull and hard to sell, buyers demanding concessions, which jobbers and millers are unwilling to give. Chemicals and dyestuffs continue dull, demand being restricted to actual needs, but prices keep firm, except on a few specialties. Jobbers of paints and glass report brisk business, considering the extraordinary slump in building, and prices are strong, though collections continue slow. Lumber manufacturers and jobbers are going a little slow, awaiting developments in the financial situation. Hides and skins are inactive, prices are weak, and the supply large, including many old hides. Retail shoe dealers are having a seasonable trade at steady prices, but manufacturers are not working on full time and are buying only for immediate needs, and collections are reported slow. Prices have been maintained in the leather market. Tobacco buyers are ordering only small lots to fill in, using up closely stocks they hold, and waiting for the present disturbances to subside, calculating that the cost will be no greater and may be less. Iron business remains extremely quiet, the consumer showing no disposition to buy beyond his immediate requirements, while the seller is not urging sales, and both are disposed to await developments. Production has been maintained, but no stocks of consequence have accumulated. A number of furnaces are already out of blast. Finished materials are quiet, with mills curtailing output. Demand for coal is good; prices are firm, and materially advanced over those prevailing in the early season. In financial circles conditions show little, if any, change. The currency famine causes some uneasiness, and banks are paying 3½ to 3¾ per cent. premium to supply wants. New York exchange is quoted at $5 per thousand premium. Banks are discounting customers' paper at 6 per cent. and renewing such loans freely under good conditions. Commercial paper is very limited; sales at 7½ to 8 per cent. for prime names. Present conditions are causing a contraction in the volume of business generally and making collections very slow in all lines.

PITTSBURGH.—There is no demand for pig iron and but little interest manifested on the part of buyers, though prices are weaker and plenty of iron is to be had. Production has been reduced about one-third, which will prevent any large accumulation of stock. On account of the closing of furnaces the output of coke has also been reduced about one-third, and the movement shows a proportionate falling off. New business in finished products has been very much curtailed, and present conditions are expected to prevail until the financial situation has improved. Nominal quotations for spot pig iron at the valley furnaces are as follows: Standard Bessemer, $20; chilled basic, $19; No. 2 foundry, $19, and gray forge, $19. Standard Connellsville furnace coke is quoted at $2.50, and foundry coke, $3.25 to $3.50, at the ovens. Some houses in the iron trade which have been discounting in ten days have discontinued doing so, and are now taking thirty and in some cases sixty days. In groceries business is good and collections satisfactory. In shoes business is good, with collections a little slower than usual. Dry-goods demand is good, but payments are slower. In clothing manufacturing fall trade exceeds 1906, and collections ars good, despite some slowness. In hardware settlements are freely prompt, while in lumber settlements are generally satisfactory, though a desire for longer time is reported.

BUFFALO.—Wholesale and jobbing houses in dry goods, light and heavy hardware, clothing, boots and shoes report trade active, but in the retail lines somewhat slow, which is attributed to inclement weather. Building operations do not appear to be as brisk as desired, and in the large steel and iron manufacturing lines trade appears to have fallen off. In some mills workmen have been laid off. Collections in some lines continue satisfactory, while in others they are reported slow.

BALTIMORE.—Retail trade at Baltimore has been stimulated by cold weather, and a fair business is reported for the week. Jobbers of men's furnishings, hosiery and underwear report increased sales, with fair collections. Straw-hat manufacturers report their output practically taken up to June 1, 1908, and order business is fully equal to 1906. Some cancellations, however, are being received. The markets of Baltimore, Philadelphia and Washington carried over more stocks than usual in this line. Coal shippers and miners contribute satisfactory reports. Demand is strong and prices are high. The larger dry-goods jobbers report a fair volume of filling-in orders. The aggregate business makes satisfactory comparison with the spring order business of 1906. However, information from general trade sources shows clearly a continued tendency to conservative buying for future use. Travelers in Alabama in some lines report a disappointing trip. The feeling is generally expressed that within the next month or six weeks a decided improvement in general conditions will be noted in the south. Brush manufacturers report a decrease in sales from last week. Paper at wholesale is very quiet, but prices are firm. Millinery trade is of fair volume and of a filling-in character. Maryland leaf tobacco is in active demand, with prices fair. Seed leaf is in fair demand. Havana and Sumatra are fairly active, with prices unchanged. Baltimore banks, in addition to stamping their checks payable through their Clearing House or in Clearing House funds, have requested large employers of labor to pay their employees, so far as possible, in checks, as currency is increasingly scarce. All loans demand 6 per cent. The city has borrowed from the local banks $650,000 for four months, this being caused by improvements under way, the stringency of the money market precluding the sale of city stock at reasonable figures.

CINCINNATI.—Trade is quiet, although an improvement over last week is noticeable in dry goods, notions and hardware at wholesale. Groceries are in fair demand. Provisions are irregular and not very active. Financial conditions are slowly improving. Checking and deposits have been more liberal, but business in loans and securities is inclined to be a little dull. Prime commercial paper is accepted in a limited way at 6 per cent. discount. Banks are still disposed to take care of their currency and do not let loose large amounts. New York exchange inclined to be weak, and is quoted at 60 cents discount per $1,000 among the banks, and supplies to general trade are at about par. Business among the country banks has shown a tendency to pick up.

CHICAGO.—Banks and business of the west continue on a Clearing House certificate basis, and four national banks here, backed by the Clearing House Association, are issuing small scrip for use on pay rolls and in lieu of currency, which is scarce and commands 2 to 3 per cent. premium. The latter is issued at the instance of merchants, manufacturers and railroads, who find it difficult to secure enough funds to meet their payments to employees and in making change in the regular course of business. Bankers are shipping moderate amounts of gold and currency to the interior where it is absolutely necessary, and they are taking care of merchants and manufacturers who are solvent but hard up. Pressure is being put upon holders of grain and cotton who have loans from the banks to have the stuff shipped out so that gold can be secured in Europe. Foreign gold engagements by Chicago banks to date aggregate $10,055,000 and new currency circulation over $10,600,000, while the local banks have also received nearly $4,000,000 in government deposits of late. There is no regular money market. Deposits are decreasing and loans are being kept down. Exchange on New York is quoted at 75 cents premium. Lighter buying and cancellation of orders is the feature of the mercantile trade. In the large cities jobbers are doing nothing of consequence, and their purchases here have fallen off sharply. Between 5,000 and 10,000 men have been laid off in this district of late, and further reductions are contemplated unless a change for the better comes at once. Manufacturers are catching up with old orders and getting few new ones. Pig iron is quiet on a buyers' market. In most finished products recent prices are asked. A reduction of $1 per ton is noted in cast-iron pipe. Coal is weak and cars are more abundant. Lumbermen are doing less than in years at this season, and prices are easy. In all other lines sales are confined to small lots to fill immediate wants. Butter and poultry are higher. Increased receipts of cattle and sheep made for lower prices, while decreased arrivals of hogs sent quotations up. Collections are slower, with increased requests for extensions.

INDIANAPOLIS.—Although there are no important changes in financial conditions, there appears to be more confidence and a tendency to breathe easier. Wholesale grocery houses report collections better than they have been for some time past, and other lines find collections a little easier. The retail trade has not revived. Banks here are still using the Clearing House check system, as are some others throughout the state where the withdrawal limit is still on. However, outside of Indianapolis, some Indiana banks are paying cash on demand and apparently are not suffering any unreasonable drains. The movement of corn has not yet begun. Wheat is about all in. Light snows throughout the state during the past few days have stimulated demand for winter clothing. Indiana records no failures of any consequence this week.

TERRE HAUTE.—Little, if any, improvement is discernible in financial affairs in this locality, the scarcity of funds being everywhere evident. This has resulted in the non-payment of maturing paper at banks. Partial payments are made in some instances, but more frequently extensions are granted. Loans are still refused. In only extreme exceptions have pay rolls been met to any great extent with currency, the major portion of which is finding its way back to the banks. Coal operators are endeavoring to realize cash receipts on all sales. Owing to the financial situation, some manufacturers have closed down for repairs and the installation of new machinery, while others are running at a capacity of one-half and less. Sales and collections in mercantile lines, wholesale and retail, are naturally retarded.

LOUISVILLE.—Dry-goods jobbers report business fair, but with their customers only buying immediate necessities. Hardware wholesalers report business good, their trouble being with collections and the handling of small bank checks, which are refused at local banks. The tobacco market is quiet, and the warehouses are holding parts of 1905 and 1906 and almost all of 1907 crops, awaiting buyers. Several of the largest labor-using manufacturers have greatly reduced their forces on account of the scarcity of currency. Banks here are reported to have almost enough currency to supply business needs, but the stringency continues, is restricting the business done, and making out-of-town merchants very conservative in their buying. Whiskey dealers and distillers report that October was an exceptionally fine month. Sales and demands were large. Disappointment is felt so far this month, as the business has fallen off considerably, and the demand for bonded goods has lessened, principally on account of the amount of cash needed to pay taxes. While this city is in excellent financial condition, the present conditions are felt in all lines of business, manufacturing, wholesale and retail, and business is much retarded. Collections in all lines are reported very slow.

ST. LOUIS.—Every branch of business has suffered more or less during the past month. Traveling men are meeting with poor success in the shape of spring business. In some instances, houses with a large staff of travelers have called in about half of them temporarily. Filling-in orders, while numerous, are small and for only absolute necessities, although prices are well maintained. In some instances, orders for December shipment have either been held up until further notice or canceled. Collections also show a falling off, and numerous extensions have been asked. However, the strength of the recent flurry is believed to be broken, and merchants look for a speedy restoration of business to normal conditions. During the past few days banks have been more liberal with currency, and in extreme cases have shipped money to country banks for the purpose of moving crops. This is regarded by many as the best sign that the worst is over. Millers are not buying full wheat requirements at present, as they have enough on hand to keep them running full time. Export trade shows a good volume of business at firm prices. Seasonable weather has done much to stimulate retail trade.

KANSAS CITY.—Trade in general shows a decrease. Jobbing in leading lines is up to expectations considering financial conditions. There is a tendency with some to curtail expenses. Collections are not so good as a week ago. In many instances demands for remittances are being met with partial payments and extensions are being asked. Retail trade is only fair. Local banks

continue to exercise a conservative policy in renewing loans, and 8 per cent. is freely offered, but practically no new loans are being made.

MILWAUKEE.—Trade in general is regarded as satisfactory as circumstances permit. Collections are improving and confidence is being restored. Demand for loans nominal at 7 per cent.

SIOUX CITY.—Bank deposits are gradually shrinking. A meeting of grain men and bankers here this week resulted in a decision to open line elevators in this section, grain being paid for in Sioux City Exchange. Wholesale and retail trade in all lines shows a falling off, and collections are slow. Receipts of live stock are far below normal.

DAVENPORT.—Trade is very quiet. Some manufacturers have decreased their working forces, while others are working shorter hours. Very little grain is moving. Banks continue to issue Clearing House certificates and cashiers' checks. Collections are slow.

ST. PAUL.—Business continues with remarkable energy, despite conditions, although buying for future delivery is not so lively as it was some time ago. Collections, too, are much better than expected, although varying in degree with different jobbers. About as much money has been received as last year, but compared with the increased outstandings the percentage showing is not so favorable as last November. The outlook for business is very good. The only trouble is with the means of carrying it on. Buying of grain has been resumed by means of credits on the business centers, which plan the jobbers have commended to all their customers, and shipments will be pushed to the utmost.

MINNEAPOLIS.—A feeling of satisfaction is found in mercantile circles as regards the situation. Retail trade in the city is good, but would be improved by colder weather. In the country good weather has enabled the farmers to push outside work. Jobbers, however, report about the same amount of reorders as usual. Conservatism is noted in placing orders for future delivery, though many for spring are already booked. Collections are falling off, though not so much as was expected. Elevator companies are again buying grain in the country, but transactions are restricted because payments are made by exchange or checks, and prices are low. Flour mills are lessening their output because they will only sell on sight drafts, and buyers are ordering only for present requirements. Lumber is quiet, but prices are firm.

SIOUX FALLS.—The financial stringency has practically stopped marketing of farm products, and retail trade is about cut in two. Banks are paying out only small sums. Collections are slow. Railroad passenger traffic has decreased. Many salesman have been called in, and all are awaiting developments.

OMAHA.—General business shows some improvement, especially retail trade. Grain is again being purchased by elevator companies to a limited extent. Money is in demand, but no new loans are being made. Live stock shipments continue light. A conservative tendency is being pursued by country merchants in placing orders for future delivery. Collections are fair.

LINCOLN.—Jobbers report a rather light trade, with slow collections. Cooler weather the past few days has helped retail trade, and dealers say business is equal to last year's.

WHEELING.—The window-glass industry is practically at a standstill, as the men will not accept the sliding scale; the fires are out and there is no immediate prospect of resumption. A number of plants are shut and 7,500 men in this vicinity are idle. Miners do not want to accept scrip, and some merchants accept it only at a discount. Some banks refuse to issue New York drafts. Some merchants accept the scrip in payment for merchandise, but are unable to give change for them.

CHARLESTON.—Wholesale trade is quiet and and collections are slow.

RICHMOND.—There is little change in dry goods and kindred lines. Orders for immediate shipment are small. Dealers in toys and holiday goods are having an excellent season, and in some instances are from two to three weeks behind in shipments. Offerings of tobacco on the Richmond market are considerably behind the average, but for what has been sold, prices show a better average than last year. Manufacturers of tobacco are working at full capacity; in most instances the old crop is well used up. Smaller quantities of cotton are being marketed, due to the lateness of the crop and scarcity of currency. In Richmond the bankers have been able to care for their regular patrons, while in some smaller centers scarcity of currency has retarded trading. Collections are not good.

SAVANNAH.—The cotton market continues firm, with no pressure to sell. The movement continues on a liberal scale. The naval stores market and prices are unsatisfactory. Collections are very slow. Jobbing trade is dull. A number of wholesalers have called in traveling salesmen temporarily. Clearing House certificates are finding general favor in all trades.

AUGUSTA.—Trade shows a slight improvement over last week, and collections are somewhat better.

ATLANTA.—Collections are slow. The volume of Christmas orders has been reduced. All lines feel the effect of the currency stringency and the holding of cotton. Banks have an unusually large accumulation of currency, but are demanding 8 per cent. or better on restricted loans.

JACKSONVILLE.—Banks grudgingly continue currency payments, and are refusing loans and discounts. Scarcity of cash has forced shut-downs of saw mills, shops and naval store work, cripples trade and paralyzes industry. Collections are bad.

BIRMINGHAM.—The usual volume of trade is being done, though collections are only fair. Some large industries are reducing working forces, though this is regarded as temporary, and in some cases to make necessary repairs.

MOBILE.—Jobbing is quiet and collections are extremely poor. Retail trade is fairly good, but reduced sales are being offered in some quarters, both in the city and country. Economical measures are adopted by jobbing houses, owing to inability to make collections from customers who, until recently, took advantage of all discounts. Local bankers are seriously considering the issuance of Clearing House certificates, which will possibly relieve the local tension somewhat.

MONTGOMERY.—Jobbers and wholesalers report business inactive, and collections are very poor. Trade in all retail lines is very dull, and very little cotton is moving. The money stringency has demoralized business in all lines.

CHATTANOOGA.—Trade in general has been affected but little by the shortness of money, and dealers express satisfaction with the present volume. Manufacturers report a shortage of orders, and are temporarily reducing forces.

MEMPHIS.—Effects of the financial stringency are felt all along the line. Wholesale and retail business is not up to former years. Collections are slow. Cotton is moving slowly.

NASHVILLE.—Collections are fair. Jobbing is inactive.

LITTLE ROCK.—Wholesale trade continues quiet, most houses having few salesmen on the road. Retailers are doing a fair amount of business, mostly on a cash basis. Very little cotton is moving, and as a consequence collections are slow.

NEW ORLEANS.—Trade is still dull, but cool weather has benefited retailers to some extent. Grocery jobbers are doing a fair volume of business, with rather good collections, but other lines report little activity. Sugar planters are hastening their work as much as possible, fearing low temperature, but so far there has been no particular damage. Top cotton has stopped growing, but weather conditions are good for working the fields.

FORT WORTH.—Locally the situation has improved. Bankers feel easier, but as a precaution are making but few loans. Some cotton is being sold, and reports are that many farmers are willing to let go and will as soon as money gets easier. Collections by jobbers are coming in very well, all things considered, but some houses are soliciting little business. Cold weather and frost this week hurt cotton and late vegetation but stimulated retail trade.

WACO.—Local retail trade continues satisfactory, but in the small towns there is practically no business. Jobbing trade is quiet. Collections are slow.

SAN FRANCISCO.—The total issue of Clearing House certificates now aggregates $5,000,000. Holidays continue, and an extra session of the legislature seems assured. Grain, beans and fruit, temporarily held up, are now moving eastward. There is very little trade in stocks, and money is tight.

SEATTLE.—Jobbers report that trade has fallen off to some extent. This also has been the case with the larger department stores. Collections are only fair. Money is tight and there is very little available for speculative purposes.

SPOKANE.—Retail business, heretofore good, is slackening, being influenced by the unsettled condition of affairs. Wholesalers report business fair, with collections about the average. Wages have been cut in some instances from 10 to 25 per cent. No new orders are being received for lumber, and mills are waiting for cars to finish up some old contracts, when they may shut down. No buyers are in the field for wheat, though it is reported that Portland and Seattle will shortly put men in the field.

TACOMA.—Considerable curtailment is noted in lumber and shingle lines, and general business is quiet, but merchants are taking a hopeful view of the situation. Collections are fair.

PORTLAND, ORE.—Trade continues quiet, but confidence is being restored and an optimistic attitude prevails here.

TORONTO.—Continued seasonable weather has given an excellent tone to trade in fall lines, and retailers report business is moving well. The wholesale movement is also quite good. Shipments are large, and they will continue so until the close of navigation. The outlook for the holiday trade is generally bright. Retailers have taken on good stocks, and the general expectation is that the volume of trade will compare well with that of former years, despite the fact that the continued tightness of money and the seemingly general expectation of a period of rather lessened business activity would promise some restriction in this regard. While these expectations are more or less general, business men have faith in the soundness of basic conditions, and expect spring will see a return to the progressive activity of a few months ago. In the dry-goods trade there has been an excellent sorting movement in fall lines, and retailers report their shelves have been pretty well cleared. Winter goods are also beginning to move well. The demand for furs has been active, notwithstanding high prices. Values in general lines hold steady to firm. Staple groceries are in excellent demand, as are also lines for the holiday trade. Values are firm. Rice is expected to advance. Orders for hardware lines are good. The trade in sporting goods has been particularly active. The building trade has been less active lately, and on this account the demand for materials has not been quite so heavy. Country produce is still slow in coming forward. Prices for dairy produce have a slightly easier tone. Other lines are steady to firm. Country retail trade is beginning to show increased activity.

MONTREAL.—Wholesale and retail trade is satisfactory, and, taken as a whole, collections are fairly good. Retailers report excellent fall business has been done, owing to good weather, and there has been a fair run of sorting orders. Wholesale dry-goods trade has a healthy tone, although sorting orders for winter goods are inclined to be light. Deliveries of cottons and other textiles are still slow, but values are firmly held. Money is still very scarce. Heavy shipments of goods are being made to all parts of the country by water; particularly, large shipments of heavy goods are going forward. The grocery trade keeps active. The demand for supplies for lumbering camps is heavy. Canned goods are active at the high prices ruling. All cereals hold very firm. Country produce is still slow in coming forward, and supplies are light. Dairy products are firm on active demand. Cheese, however, has shown a slightly easier tone during the past week. Some shipments of Irish and Siberian butter are being received here. There is further talk here of retrenchment in some lines of industry. There is, however, plenty of work offering for laborers, and, so far as can now be seen, the number of idle men will not be abnormally large this winter. The market for hides is quiet. Beef hides are easier in tone, while lambskins are firm. Wool is quiet and unchanged.

VANCOUVER-VICTORIA.—The movement of wholesale and retail stocks here continues good, and values are firm. Provincial industries are fairly active, although there is still a great shortage of labor. The shortage of rolling stock is affecting deliveries of goods, and some effect of the scarcity of money is now being felt. The shipping trade is brisk; trade with the Orient continues to increase in volume. Collections are fair to good.

WINNIPEG.—General trade here is showing an excellent tone, and the tendency is toward improvement in volume. The grain movement is slow. The railways are unable to supply the needed cars, and there is complaint that the banks are short of money. It is announced the Minister of Finance has met the bankers in connection with this matter and has promised the aid of the government. Merchandise is moving fairly well, and general wholesale and retail trade is fair to good. Collections are still slow. Grain prices are easier, but other produce holds firm.

FINANCIAL.

Money Market.

Gold receipts from Europe at New York this week aggregated some $15,000,000, of which a proportion was, however, for interior cities. The banks have also continued to forward currency to out-of-town correspondents, and were called on by the Treasury to return some $7,000,000 of the government deposits, this step being rendered necessary by the diminished working balance. It is estimated that the actual movements of money for the present week resulted in a loss of $6,000,000 by the banks, which may be offset by the large amount of hoarded currency and gold which has been returned to circulation by the payment of the premium therefor, which this week ranged from 4 to 2 per cent., it being noted that the premium tended to decline at New York as the week progressed. Exceedingly narrow conditions still prevailed and banking institutions were decidedly conservative, one of the features of the situation being the entire absence of offerings of time money, though later in the week some small amounts were obtainable at 12@10 per cent. for thirty to ninety days, while twelve months' money was quoted at 6 per cent. without any business having been done on that basis. Commercial paper is also entirely stagnant, and the quotations for prime double names of 8@7 per cent. are merely nominal. Call money has been supplied in sufficient amount to meet the requirements of the stock market, the renewal rates having ranged from 10 to 15 per cent., and toward the close of each day's market, when demands had been satisfied, some left-over balances would be offered at 6 per cent. or better. As the week progressed there was some calling of loans by the leading banks, and presumably by the syndicate which supplied $25,000,000 at the beginning of the troubles, the construction put upon this incident being that it was now deemed feasible to gradually reduce these emergency lendings.

New York Banks.

Last Saturday's bank statement agreed in its principal features with current forecasts. The decrease in cash of $4,312,000 was about half as large as the estimated actual loss and of course did not fully reflect the large gold arrivals from Europe, a considerable proportion of which came in too late in the week to figure to any large extent in the averages. The increase in loans of over $38,800,000 was the natural result of the aid extended by the Clearing House Association to other institutions, both in New York and elsewhere, which required help. The item of deposits showed a decrease of over $35,000,000, which agreed with the changes noted above. On the whole, the statement was construed as being based upon rising averages, which in most cases result in a bank statement rather more unfavorable than the actual facts require. The reserve required against deposits increased $8,772,000, so that the surplus reserve decreased $13,085,800, and including United States deposits represents a deficit in that respect of $51,924,625. Leaving the government deposits out of account, the deficit, however, is only $33,651,575. The figures of the statement

compare as follows with those of the preceding week:

	Nov. 9	*Nov.* 2	*Changes*
Loans	$1,187,316,400	$1,148,452,600	I. $38,863,800

Foreign Exchange.

Throughout the week the foreign exchange market at New York has been erratic and unsettled, under the influence of the continued monetary strain, while operations in connection with further gold engagements constituted the principal factor in the market. Eliminating some cancellations, net engagements in the London market aggregated about $10,000,000. Under their influence there continued to be a steady and, at times, an eager inquiry for cable transfers, which were quoted at as high as $4.90@$4.90½. Quotations for demand sterling fluctuated rapidly, the tone toward the close of the week becoming stronger. On the other hand, during most of the time there was practically no market for long sterling, and the quotations for that class of bills given below are, in fact, nominal. Satisfaction was expressed in regard to the very strong showing made by the Bank of England in its weekly statement, issued on Thursday, which displayed an increase of £3,171,066 in gold, despite American engagements. Furthermore, the proportion of its reserve was raised from 35.20 per cent. last week to 40.50 per cent., and there was an apparent decrease of over £1,500,000 in loans. More or less disappointment was created, both at London and New York, by the unwillingness of the Bank of France to part with any considerable amount of its gold for shipment to the United States, which, had it been effected, would tend greatly to relieve the situation at the British capital.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Nov. 9	*Nov.* 11	*Nov.* 12	*Nov.* 13	*Nov.* 14	*Nov.* 15
4.79½ @ 4.86½	4.79½ @ 4.86½	4.79½ @ 4.87	4.79½ @ 4.87	4.79½ @ 4.88	4.80 @ 4.88

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.85.50 @ 4.86.00	4.86.00 @ 4.86.25	4.85.75 @ 4.86.25	4.85.90 @ 4.86.10	4.86.25 @ 4.86.75	4.86.75 @ 4.87.00

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.78.00 @ 4.78.00	4.77.50 @ 4.78.00	4.77.50 @ 4.78.00	4.77.25 @ 4.79.00	4.78.00 @ 4.79.00	4.78.00 @ 4.79.00

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.90; commercial bills, 4.76½@4.78; francs, 5.23¾ less 1-16@5.18¾ less 1-32; reichsmarks, 93⅜@94⅝ less 1-32.

In the London open market call money is 5@4¾ per cent. and discount is 6 11-16@6¼ per cent. The Bank of France shows for the week a decrease of 49,425,000 francs in gold and an increase of 49,325,000 francs in its bills discounted. Its rate is unchanged at 4 per cent., which is also the quotation for discount in the Paris market. At Berlin the bank rate is 7½ per cent. and the market 6⅝ per cent.

The record of gold engagements to date, compiled by the *Journal of Commerce*, reads:

National City Bank, New York	$9,250,000
Lazard Freres	10,750,000
Heidelbach, Ickelheimer & Co	10,500,000

Cancellations	
National City Bank	1,000,000
Bank of Nova Scotia	600,000
Total cancellations	1,600,000
Net total engagements	60,000,000

New York Securities Market.

Sentiment in stock-market circles at New York and other cities is decidedly mixed, and activity has been on a restricted scale, owing to the general disposition to discourage purely speculative operations and the apparent exhaustion of the demand for securities from bargain-hunting investors. In spite, however, of the extension of the financial pressure to other sections of the country and of the maintenance of the premium for currency and gold importations, Wall street developed a tendency to take a somewhat better view of the outlook, a belief being generally expressed in that quarter that the situation at the metropolis was improving. Last Saturday's bank statement was construed as representing rising averages and a probability that normal conditions were being restored in the banking position. Another circumstance which was favorably regarded was the unexpectedly good statement published by the Bank of England on Thursday, showing that its position had been strengthened materially in the face of the continued run upon London gold reserves for the aid of the American market. Disappointment was however felt, both in London and New York, that the Bank of France, as detailed elsewhere, did not see its way clear to yielding up some $25,000,000 of its gold to New York, in order to further strengthen the market here and likewise relieve the strain upon London. In the relations of the local money and stock markets there was practically no change, apart from a little easier feeling in respect to call money, but, on the other hand, institutions generally refrained from putting out money on time, the inability to borrow in that form being an effectual bar to any activity by speculative interests.

In the early part of the week the market, as already mentioned, seemed imbued with more cheerful views, which was reflected by a comparatively firm undertone in the general list, and by some improvement in the range of quotations. Later, the market experienced a renewal of liquidation, which on Thursday and Friday assumed a marked character. The selling was especially prominent in various leading stocks, such as St. Paul, Pennsylvania, American Sugar and others which are usually classed as investments. The United States Steel stocks, also, were features in this movement, and, in fact, became the objects of not a little bearish talk, based upon the current reports in regard to curtailment of production and decreased demands in the iron and steel trade. The theory which, however, found the freest circulation as to the cause for the renewed outbreak of liquidation was that it represented sales by large financial interests at western cities, which had been forced to adopt this course by the severe monetary pressure at various points. In the case of St. Paul, which made a new low record, selling down to 96¾, it was claimed that parties who had subscribed for the new stock were finding it difficult under existing conditions to meet their maturing installments. A favorable, and rather unexpected incident, was the declaration on Thursday, somewhat in advance of the regular time, of the customary quarterly dividend upon both of the leading Harriman stocks, Union Pacific and Southern Pacific. This, however, had little effect in a general sense, and in Friday's trading there was again free selling and recessions, which carried many securities to new low record quotations.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending November 14 shows an aggregate of $2,366,700,000, as against $2,372,755,000 last week and $3,342,601,000 in the corresponding week last year. Canadian clearings for the week aggregate $92,962,000, as against $105,020,000 last week and $95,961,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	November 14	*Inc.*	*Dec.*	*November* 7
New York	$1,372,513,000	....	35.1	$1,357,348,000

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*Nov. 8,* 1907	*Nov. 1,* 1907	*Nov. 9,* 1906
American	2,565,082	2,369,805	2,850,204
Other kinds	806,876	766,876	765,000
Total	3,371,958	3,136,681	3,615,204

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Nov. 8, 1907	*Nov. 1,* 1907	*Nov. 9,* 1906
Great Britain and continent	1,760,000	1,669,000	1,664,000
Egypt	132,000	133,000	140,000
India	301,000	312,000	321,000
United States	1,179,000	1,023,000	1,484,000
Total	3,372,000	3,137,000	3,615,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	442,610	454,043	566,903
Season	3,443,540	3,000,930	4,594,917

Boston Shoe and Leather Market.

The leather market is feeling the effect of the prevailing scarcity of money, but rarely have the shoe and leather trades as a whole been in such excellent position to meet just such a situation. For months tanners have been curtailing their product, so that deliveries have taken care of stock as fast as it comes into the market. There are no accumulations of really first-grade stock of any kind, excepting possibly glazed kid. Heavy hemlock sole leather is scarce and dealers have difficulty in filling the pressing demand of customers. Sales are rarely of large figures in any line, but shipments are made from week to week, as needed for the cutting room. Tanners are neglecting the hide market, and prices are weakening. Shoe manufacturers are receiving orders by nearly every mail. The prevailing experience is that orders are smaller than expected, but goods are wanted for December 15 shipment or even sooner, so that there is every reason to believe that other orders are to be given for later shipment. The lack of orders and high money rates have caused many concerns to scale the output of their factories down to requirements for immediate shipment. This means only about 50 per cent. of normal production for a period of a month or two, if not longer. The *Shoe and Leather Reporter's* statistics this week are of the same tenor as during the last month or two. Shipments are falling off, and 1907 decrease has passed the quarter-million mark. Last week, 83,298 cases; preceding week, 89,711; last year, 96,118; total for 1907, 4,219,001; total for 1906, 4,477,777; decrease, 258,776.

Wool Markets.

Trade has been quiet, owing to conservative policy by the mills, manufacturers taking wool only for current requirements in small lots. Prices have undergone the readjustment predicted in many lines of trade, and quotations are being made on a basis nearly a cent below last week, though little wool is being moved even at the concession, as fine staple wools are sold up so that they are not affected by the decline. The main factor in bringing about lower values just at this time was the weakness in Australia, where the French and German buyers, who where purchasing eagerly at high prices, followed the American lead and either cut down their price limits or withdrew from the market altogether owing to the disturbance in financial and commercial circles. The sudden falling off in the demand resulted in a sharp drop in prices, recent quotations having been upon a basis that means a reduction of 4 cents in the cleaned cost laid down in Boston, so that corresponding grades of domestic wool do not look as attractive as they did while foreign markets were so strong. South American markets are also reported quiet, weak and declining. There is but little interest being shown in the reduction, the demand being slack, but the trade is considered in a very strong position financially, owing to the fact that they sold the bulk of the clip very early in the season, and are therefore not burdened with large stocks as was the case last year. Collections are reported good, and while some outside banks are reported to have asked their correspondents to take up wool paper ahead of time, this is being done easily and without stress of any kind. The sales of the week were mainly small lots of a fair aggregate, and were principally territories, largely clothing grades.

IN MEMORIAM.

At the last meeting of the Board of Directors of The Bradstreet Company the following Memorial Minute was unanimously adopted:

Since our last meeting this Company has suffered a severe loss in the death of William N. Wilmer, a member of the firm of Wilmer & Canfield, its General Counsel. His death will be felt as a personal bereavement by each member of this Board, and is a distinct loss both to his profession and to the various organizations with which he was identified and to which he gave so much of his time and his ripe experience.

The Directors desire to record their recognition and high appreciation of his sterling qualities and genial nature, which endeared Mr. Wilmer to all his friends and evoked both admiration and affection in the hearts of those who came within the scope of his influence. To those who were privileged to know him best, the memory of his personality will endure as an incentive to the cherishing of the highest ideals and standards of duty in all relations of life.

CHARLES L. BECKWITH,
Secretary.

New York, Nov. 15, 1907.

DIVIDENDS.

UNION PACIFIC RAILROAD COMPANY.

A Quarterly Dividend of $2 50 Per Share on the Common Stock

of this company has been declared, payable at the Treasurer's Office, 120 Broadway, New York, N. Y., on January 2, 1908, to stockholders of record at 12 M. on Saturday, November 30, 1907.

The stock transfer books will be closed at 12 M. on Saturday, November 30, 1907, and will be reopened at 10 A. M. on Wednesday, December 18, 1907.

Stockholders who have not already done so are requested to promptly file mailing orders for dividends with the undersigned, from whom blank orders can be had on application.

FREDERIC V. S. CROSBY, Treasurer.

NEW YORK OFFICE OF

The American Cotton Oil Company,

27 Beaver Street, New York City.

The Board of Directors of The American Cotton Oil Company, on November 7, 1907, declared a semi-annual Dividend of Three per cent. upon the Preferred Stock, payable December 2, 1907, at the Banking House of Winslow, Lanier & Company, 59 Cedar Street, New York City.

The Stock Transfer Books of the Company will be closed on November 14, 1907, at 3 P. M., and will remain closed until December 6, 1907, at 10 A. M.

JUSTUS E. RALPH, Secretary.

FINANCIAL

ANNUAL REPORT

TO THE STOCKHOLDERS OF

The American Cotton Oil Company,

FOR THE

Fiscal Year ended August 31, 1907.

THE AMERICAN COTTON OIL COMPANY,
EXECUTIVE OFFICES,
27 BEAVER STREET,
NEW YORK, November 11, 1907.

TO THE STOCKHOLDERS OF
THE AMERICAN COTTON OIL COMPANY:

The Directors herewith submit their Report and Statements of Account for the fiscal year ended August 31, 1907, being the Eighteenth Annual Report of the Company.

SHARE CAPITAL.

The amount of the Capital Stock, issued and outstanding, is unchanged, viz: Common Stock, $20,237,100; Preferred Stock, $10,198,600

DEBENTURE BONDS.

The total amount of Gold Debenture Bonds authorized and outstanding is $5,000,000. These Bonds mature on November 1, 1915, and bear interest at the rate of 4½ per cent. per annum, payable quarterly.

ALL PROPERTIES FREE FROM LIEN.

Al the properties of the Organization are absolutely free from mortgage or other lien.

PROFIT AND LOSS.

The Profits for the year amounted to		$2,592,262 68
Deduct Debenture Bond Interest		225,000 00
Net profits		$2,367,262 68
Deduct:		
Dividends on Preferred Stock 6% per annum	611,916 00	
Balance carried to General Profit and Loss Account		$1,755,346 68

PERMANENT INVESTMENT ACCOUNT.

This account has been debited with the sum of $386,737 68 expended for additions to the properties, representing Real Estate, Cotton Ginneries, Seed Houses and Scales, Fertilizer Mixing Plants, etc ; and liability has been taken for $161,383 85 for Factory Equipment now under contract and Water Front Improvements at Guttenburg, N J.; in all, $548,121.53.

The account has been credited with amount realized from sales of Real Estate, Buildings, Old Machinery, etc., aggregating $113,467 08, leaving the net charge $434,654.45.

From this has been deducted difference resulting from the sale of inactive properties, $185,621 01.

The net result is an increase to Permanent Investment Account of $249,033.44.

REPAIRS AND MAINTENANCE OF PROPERTIES.

The properties have been maintained during the past year by the expenditure of $639,121.23, which has been charged to Operating Expenses for the same period.

WORKING CAPITAL.

The Net Working Capital of the Company on August 31, 1907, was $7,415,959.78, of which $1,638,625 48 was Cash in Banks, and $5,777,334 30 was Bills and Accounts Receivable, Marketable Products, Raw Materials and Supplies, after deducting Current Liabilities.

CAPITAL, LIABILITIES AND ASSETS,

August 31, 1907.

			Cr.
Balance of General Profit and Loss Account, August 31, 1906, as per Seventeenth Annual Report			$7,430,110 89
Difference resulting from sale of inactive properties			185,621 01
			$7,244,489 88
Profits of the Manufacturing and Commercial business of this Company and of the Corporations in which it is interested, for the year ended August 31, 1907, after charging off all expenses of Manufacturing and Operation, Repairs of Buildings and Machinery, Bad and Doubtful Debts, Expenses of Administration, etc		$2,592,262 68	
Deduct:			
Interest on Debenture Bonds		$225,000 00	
Semi-Annual Dividends on Preferred Stock,			
Paid June 1, 1907	3%	305,958 00	
Payable December 2, 1907	3%	305,958 00	
		836,916 00	
Balance to Credit			1,755,346 68
Balance of General Profit and Loss Account, August 31, 1907, invested as per Statement of Capital, Liabilities and Assets			$8,999,836 56

The Board of Directors, at the regular monthly meeting held November 7, 1907, declared the Thirty-second consecutive Semi-Annual Dividend of 3 per cent. upon the Preferred Stock, payable December 2, 1907.

It is gratifying to note that the net profits of the year, over and above all fixed charges and the dividend on the Preferred Stock, amount to $1,755,346.68, of which $434,654.45 have been set aside for permanent improvements, leaving a surplus of $1,320,692.23.

Under ordinary circumstances the Directors would, at this time, have declared a dividend on the Common Stock, but in view of the financial conditions now prevailing, they consider it to be for the best interests of the stockholders that the cash resources of the Company be conserved, and, therefore, have deemed it wise to defer action upon the Common Stock Dividend until the financial situation resumes a normal state.

It was considered that it would be unwise to deplete the Company's working capital for the payment of a common stock dividend at this time of the year, when the purchase of raw materials and the operation of the crushing mills is at its height.

The purchasing of cotton seed must be done chiefly during the period between October and February, when all the cash resources of the Company are required for the conduct of its regular business.

The Company continues the policy of liberal expenditures each year for repairs and improvements, maintaining the active properties in thoroughly satisfactory physical condition. Machinery has been improved and supplemented by such modern appliances as tend to economize time and labor and reduce manufacturing cost. These expenditures have been charged to expenses

The favorable weather conditions at the opening of the season gave promise of an unusually large yield of Cotton Seed. Unfortunately, a severe storm at the end of September caused great damage throughout a large area of the cotton belt. The quantity of cotton seed was not so much affected as the quality.

Owing to the scarcity of rolling stock and inadequate railway facilities, the transportation problem became acute and the congestion of traffic seriously delayed the movemen of products to market. Notwithstanding these drawbacks, the Company eventually completed its contracts.

As the season advanced, products were in good demand at higher prices, which contributed to the satisfactory results of the year.

The cotton crop of 1906-1907 was 13,273,809 bales, compared with 10,575,017 bales the previous season.

The total production of cotton seed is governed by the size of the cotton crop, and from the nature of the article there can be no accumulation carried over from one season to another.

The exports of Cotton Seed Oil during the year ended August 31, 1907, amounted to 801,143 barrels, valued at $16,720,679, and of Cotton Seed Cake and Meal—679,188 tons—valued at $17,270,123; a total value for these two products of $33,990,802.

The domestic consumption largely exceeded these amounts.

The uses of cotton seed oil are on the increase. It is sold under its own name and is becoming popular in this country for cooking and salad purposes. It is also an important constituent of numerous food products.

All the properties and stocks of merchandise are fully covered by insurance; and collections, where losses have occurred, have been satisfactorily made in every instance.

There were no bills payable at the close of the fiscal year and there was $1,638,625.48 cash in banks.

All bad debts have been charged off and ample provision made for doubtful accounts. The percentage of loss from bad debts has been only one-tenth of one per cent.

The stock of finished products carried over at the end of the fiscal year has been disposed of at a profit.

The specialties of the Company, protected by trade-marks, brands, etc., are varied and comprehensive and of much importance to the Organization, and add greatly to the safety and stability of the business.

Your Company's reputation as a maker of pure edible products sold under their own names has been uniformly of the highest. The management, however, welcomed the movement for stringent pure food laws and promptly filed certificates of guarantee as required.

The reputation of the Company has been established and maintained by fair dealing and a straightforward, vigorous policy. The appreciation and preference obtained for its goods in all markets, both foreign and domestic, is due to the high standard of the manufactured products and the excellent condition in which they are delivered to the buyer.

Your Company continues to enjoy the highest credit, and is in a position to take advantage of any important change in the general situation.

The acknowledgments of the Board are due to officials and employees for faithful and efficient discharge of their duties during the year.

For the Board of Directors,
GEORGE A. MORRISON,
Chairman.

SATURDAY, NOVEMBER 23, 1907.

Financial and business interests were confident at the end of last week regarding an issue of Panama canal bonds as a measure of relief. In fact the coming announcement was reflected by an improvement in securities prices on last Saturday. The news which awaited the country and Wall street, that the offering of $50,000,000 of 2 per cent. Panama bonds was accompanied by the invitation to bid for $100,000,000 of 3 per cent. one-year Treasury notes, was, however, entirely unexpected. At the outset the effect was decidedly stimulating. American and other securities had a considerable advance last Monday in the London market, while the improvement in quotations at New York reflected a general feeling that means had been provided for a large increase in the national bank circulation, with the further possibility that the 3 per cent. notes would furnish a basis for some arrangement with the Bank of France whereby that institution might be induced to part with a substantial amount of gold, accepting a block of the notes in question as security therefor. As the Treasury's plan was more closely examined it seemed, in Wall street's eyes at least, to bear a less favorable construction. Such feelings were doubtless aggravated by the renewed liquidation and consequent severe declines in stock market quotations, particularly in bonds, which were the feature of the midweek, and which, it is generally conceded, resulted from causes entirely independent of the bond and note issues. As to the latter there has appeared to be not a little confusion of ideas, both as to the terms of the offer and the effects of the operation upon the currency situation. In fact, from a stock market standpoint, the influence exerted by the note issue has thus far been disappointing, notwithstanding the widespread interest taken in the matter and the general hope in business circles that it will go far toward relieving the monetary stringency and reëstablishing confidence and credit. It may be remarked that the apparently dubious views which are reflected by the condition of the stock market this week are in large part due to the before-mentioned confusion about the details relative to the Treasury notes, coupled with lack of information as yet from the government as to the amount of subscriptions received or their source, while the maintenance of the premium for actual currency and the practical inability to obtain time loans contribute powerfully to the same end. The fact that the currency premium declined sharply on Friday and that some $2,000,000 gold was obtained in Paris had, however, a good influence in the late transactions on that day.

Interest in two of the country's associations devoted to reform, namely, the National Municipal League and the American Civic Association, was increased by the holding of a joint meeting of the two bodies at Providence, R. I., this week. The range of matters discussed was naturally wider than is usual with either body separately; such matters as forest preservation, the saving of the Grand Canyon of Colorado, government by public opinion, and railroads as factors in civic improvement, coming in for a share of attention, as well as topics more particularly related to the government of municipalities. One of the papers read suggested the removal of factories to the country districts as a means of relieving the congestion of population in cities and the unsanitary conditions incident thereto. It may be noted that the Municipal League still stands strongly for the exclusion of national issues in municipal elections, a goal for which reformers have long striven.

It was shown at the dinner of the New York Chamber of Commerce on Thursday evening that while a foreign diplomat still in the service may be wittily reticent, a domestic statesman freed from the responsibilities of office may be seriously outspoken. Baron Rosen lauded the golden character of silence; ex-Senator Spooner set an example of serious plain speaking. He declared that he had taken part in some mistaken legislation in the past, of which the Sherman anti-trust law, as it has been construed, was an example. He thought that law should be amended in the interest of the people, but added that if the price of the amendment was to be a federal license law the business interests of the country had better let the Sherman act alone. It will not escape notice that ex-Secretary of the Treasury Shaw, who was also a guest, lamented President Jackson's veto of the act renewing the charter of the United States bank, and declared that a large central bank clothed with authority to discount commercial paper and to issue currency against the same would do much to prevent a repetition of conditions such as we are now experiencing. Mr. Shaw followed this announcement of his opinion with the statement that he did not believe that 5 per cent. of either house of Congress could be induced to vote for the plan. It may not be without interest to note that on the same day on which ex-Secretary Shaw made the remark, a member of the Senate Finance Committee, Senator Hansbrough, of North Dakota, announced his intention to introduce a bill providing for the establishment of a federal central bank of issue.

Men of note from the Atlantic seaboard states from Maine to Florida, together with representatives from other commonwealths of the Union, met at Philadelphia this week to confer as to the ways and means of securing an adequate, rational and systematic development of the inland waterways along the eastern coast of the United States. The programme of the conference was a very sensible and well arranged one, the papers read avoiding generalities for the most part and dealing with specific features of the comprehensive project proposed. From that point of view the addresses were of a decidedly informing character. After listening to the addresses and the discussions evoked by them, the Deeper Waterways Conference adopted resolutions which may be regarded as embodying its platform. In the first of these it is suggested that as a primary movement the opening of ship canals and the deepening of intervening rivers and approaches from Norfolk, Va., southward to Key West, Fla., from Chesapeake bay to Delaware bay and from the Delaware river to the Raritan canal, and across Cape Cod along the lines approved by Congress as the most practical, having due regard for the cost and promptness of their development, is demanded by the commercial interests of 30,000,000 persons on the seaboard directly, and indirectly and ultimately by those of the remainder of the American people. It is urged that the construction of this highway can alone give gravely necessary and permanent relief to the business of transportation, and that it will surely result in stimulating commerce and in reducing the cost of moving commodities. It is finally urged that the matter be taken in hand at once by the present Congress so that the practical starting of the undertaking at the earliest possible moment can be arranged for. It may be said as indicative of the economic bearing of the project that it is estimated that with canals aggregating 66.6 miles it will be possible to save an outside distance amounting to 700 miles.

Little ceremony marked the performance of the executive act which completed the process of admitting Oklahoma into the Union on Saturday, November 16. At sixteen minutes after 10 o'clock the President went for a minute or two into the Cabinet room, where, in the presence of a number of interested persons, he signed his proclamation declaring the admission of the new state, and then, without any particular comment beyond remarking that Oklahoma was a state and that he had received many requests for the use of particular pens, went back to his routine of work in his private office. In the new state, of course, the day was marked by jubilation. The installation of Governor Haskell was marked by a parade participated in by a number of mititia and fraternal organizations, and an Indian barbecue. Governor Haskell's address was conceived in a somewhat critical spirit. He complained of the amount of the freight rates and in general of the exactions of combinations. He issued a call for the legislature to meet on December 2 at a place not determined at the time, though the call was dated at Guthrie. No programme of legislation was suggested by the governor, but it is believed that there will be no lack of propositions before the two houses when they are ready to begin work. The state will be represented in the United States Senate by Robert L. Owens and Thomas P. Gore.

With the exception of members of the legislature, no incumbent holding the prima facie title to office can be ousted in any other manner than by legal proceedings, according to the decision of the New York Court of Appeals in the much discussed case of the mayoralty of New York. The court holds unconstitutional the so-called recount law passed by the last legislature of the state. The proceeding authorized by that law, the court said, was either a recanvass of the votes cast for the office, in which case it contravened the provision of the constitution requiring that all laws regulating the recording or counting of votes should provide for bi-partisan boards, or it was a judicial determination of the title to office, in which event it violated the provision of the constitution requiring trial by jury in all cases in which it has been heretofore used. A canvass having been concluded under the statutory provisions for its conduct existing at the time, the legislature has, the court holds, no power to create a new tribunal with power to recanvass the election and to award possession of the office to another claimant. This outcome of the matter has been generally expected; the question of title may still be determined by the time-honored proceeding of quo warranto.

CONSERVING THE COUNTRY'S RESOURCES.

A matter touched upon by the President in his speech at Memphis a short time ago, and apparently much in his thought at the present time, will receive very full and comprehensive consideration at a conference to be held at the national capital in the early summer. We refer to the question of the means to be adopted to conserve the natural resources of the country. Attention was called to one phase of this subject within the last few weeks by outgivings from the Bureau of Forestry. In one of these Forester Pinchot announced the opinion that at the present rate of consumption the timber supply of the country on government reserves and private holdings would disappear in about twenty years unless means be taken to check the destruction of the forests; in another the exhaustion of the white pine supply was commented on in a striking way. So much importance is attached to the matter by Mr. Roosevelt that he has invited the governors of all the states and territories to meet him at the White House on May 13, 14 and 15 next to consider the general subject. Invitations are also to be extended to the members of both houses of Congress and the members of the Inland Waterways Commission.

Not only in the suggested personnel of the conference, but also in the terms in which he speaks of the work before it does the President indicate his sense of the weight and moment of the question to be dealt with. He declares that at the time of the settlement of the United States the natural resources of its territory were richer, more varied and more available than those of any other equal area on the surface of the earth, and that the development of these resources has given us for more than a century a rate of increase in population and wealth undreamed of by the men who founded the government and without a parallel in history. The prosperity now enjoyed depends upon these resources, and the success desired for the future rests, in the President's opinion, upon these as the ultimate material basis. It seems to him time for the country to take account of its natural resources and to inquire how long they are likely to last. To his mind it commends itself as the plain duty of those for the moment responsible to make inventory of the natural resources which have been handed down, to forecast as well as they may the needs of the future, and so to handle the great sources of prosperity as not to destroy in advance all hope of the prosperity of those coming after.

It is evident to the President's mind that the abundant natural resources on which the welfare of the nation rests are becoming depleted, and in not a few cases are exhausted already, and that this is true of all portions of the United States, though specially so of the longer settled communities of the east. Feeling that the gravity of the situation must appeal with special force to the governors of the states because of their close relations to the people and their responsibility for the welfare of their communities, he has therefore decided, in accordance with the suggestion of the Inland Waterways Commission, to ask the governors to confer with him and with each other on the important question broached. The invitation will also include citizens selected as advisers, and, as before mentioned, the members of the national legislative bodies. The general question to be considered will embrace within its purview the use and conservation of the mineral resources and of those of the land and of the waters in every part of the country. The President closes his invitation by repeating the statement made by him before that the conservation of our natural resources is the most weighty question now before the people of the United States; and that assuming this to be the case, the proposed conference, the first of its kind, will be among the most important gatherings in our history in its effect upon the welfare of the people. It is not necessary to consider at present whether the matter will loom as large to the general public when the conference meets as it does now to the President. It cannot be gainsaid that it will be productive of much good for the country to take stock of its resources, and to have indicated to it the directions in which a more careful husbanding of them is imposed by reason of prodigality in the past.

CONVALESCENCE.

Although the developments of the past week in the financial situation have been mixed in character, the impression they create is that the critical point in the disturbance has been passed and that recuperation and a restoration of confidence is under way. The principal event was, of course, the action of the government in deciding to issue and offer for sale $50,000,000 of Panama canal 2 per cent. bonds and $100,000,000 of one-year 3 per cent. notes. There has been not a little misunderstanding in this respect, particularly as relates to the notes, which, however, it is definitely stated, can be used as security for additional national bank circulation. There is thus every promise that an increase of probably as much as $125,000,000 will be made to the supply of available funds in circulation. Still, this requires time, and the Treasury, moreover, has kept its own counsel thus far as to the amount of subscriptions by banks or the extent to which the new notes have been taken in small amounts by individuals, which would be indicative of the release of hoarded money. Another important fact is that the threatened further advance of the Bank of England's rate did not occur, though its statement for the week was a rather poor one, and the taking of gold from London for American account went on as before, though on a diminished scale, the engagements of specie amounting to $10,000,000, making the total since the movement began $70,425,000, of which some $43,900,000 has been received. On the other hand, despite the assurances from various parts of the country that confidence is returning, the continued necessity of using Clearing House certificates, the locking up of cash and the maintenance of a premium for such, to say nothing of the almost complete disorganization of interior exchanges, constitute unpleasant symptoms in the financial situation. As will also be seen in the subjoined epitome of occurrences from day to day during the week, the stock market has experienced another outbreak of liquidation, with severe additional declines in bonds and stocks, accompanied by a variety of disquieting rumors. In fact, the week has not passed without some exhibitions of unsettlement, even though the feeling in financial circles is that the restoration, even if it is slow, is at least well under way.

November 16.—Stock market weak early. Some new low records struck. Closing strong at advances. Foreign exchange rises, dispelling fears of further strain on foreign markets. Money slightly easier. Some time money offered at 10 per cent. Bank deficit, $53,666,950, against $51,000,000 previous week. Feeling that the tide in this direction has turned. Currency premium drops to 2 per cent. Rumors from Washington that new bond issues are contemplated which will allow further increase of national bank circulation. Gold engagements to date, $70,000,000, of which $33,000,000 received here. Receivers appointed for six banks and trust companies which suspended in October. Run on Buffalo savings banks subsides. Currency conditions at Chicago and Pittsburgh reported improved. Issue of Santo Domingo bonds to be withheld. Steel mills at Johnstown to resume operations.

November 18.—Secretary Cortelyou announces issue of $50,000,000 of 2 per cent. Panama bonds and $100,000,000 of 3 per cent. one-year notes. Gold engagements for day, $3,500,000. Money easier. Call 5½@10. Prevailing rate 10 per cent. Time money 10 per cent. for thirty days, 8 per cent. for six months. Mercantile paper 8@10 per cent. Exchange breaks 2½@3¾ cents, with partial recovery later. Currency premium lower, with ruling rate 2 per cent. Stock market opens high and wide, with advances of 1@4 points, shaded later on realizing; dull later. Seat on Exchange sells for $51,500. Situation in interior slightly easier. Chicago issues Clearing House checks for small denominations. European markets for American stocks higher. Commodity markets irregular here. Cotton advances sharply, losing half advance later. Wheat and corn slightly higher. October foreign trade smaller than a year ago.

November 19.—Stock market 1 to 4 points lower, in sympathy with foreign markets. Less bullish feeling regarding new note issue by government and urgent liquidation of Rock Island issues. Money slightly easier. Call, 5@9; prevailing rate, 7 per cent. Little doing in time money; rates, 8@15 per cent. Mercantile paper dull; 8@10 per cent. Currency premium, 1½ to 2½ per cent. Foreign exchange market weak. Gold engagements for day, $1,500,000. Total to date, $68,925,000. Wheat, corn and cotton lower on liquidation. Books of leading railroads show large increases in number of stockholders. Currency shortage in country makes for smaller grain movement. Area in winter wheat reported little below 1906.

November 20.—Twelfth Ward Bank reopens, with considerable new deposits reported exceeding withdrawals. Stock market eases on rise of currency premium to 3 per cent. and unsettling effect of new bond and note issues. Some new low levels touched. Atlantic Coast Line directors defer regular dividend. Slightly better feeling reported in iron trade; production being curtailed. Gold engaged to-day, $1,500,000. Call money, 6@15; prevailing rate, 7 per cent. Time offerings small; 12@15 per cent. for sixty to ninety days. Foreign exchange ¾@1 cent higher. Wheat and corn easier. Cotton advanced on small crop estimates.

November 21.—Bank of England rate holds at 7 per cent. Large German commercial failure for $2,000,000. Three indictments found in Borough Bank (Brooklyn) matter. Stock market weak early, with new low levels for Southern Railway stocks, Erie, Pennsylvania, Baltimore & Ohio and New York Central; rally late on rumors of French gold engagements. Canadian Minister of Finance quoted as saying crop will be moved despite money scarcity. Terminal Bank (Brooklyn) resumes. Premium on currency advances to 3½ per cent., easing later to 2½ per cent. Gold premium, 3 per cent. Foreign gold arrivals, $3,500,000. Call money, 6@15; prevailing rate, 12 per cent. Time scarce; rates 12@15 for sixty to ninety days. Foreign exchange advances ½ cent. Wheat breaks. Cotton advances on small ginning returns.

November 22.—Stock market weak early on liquidation and high currency premium (3½ per cent.), but closed strong on break in premium to 1½ per cent. and engagement of $2,000,000 gold at Paris. Gold engaged at London, $5,850,000. Total for week, $14,000,000. Total on movement, $78,225,000. Banks apparently lose $6,000,000 cash this week. Money on call, 6@16 per cent; prevailing rate, 12 per cent. Time scarce; old quotations. Mercantile paper market largely the sale of occasional notes at 8@10 per cent. Foreign exchange slightly higher. Reported that Union Pacific has sold its holdings of St. Paul, Northern Pacific and Great Northern stocks, replacing same with part paid stock. Wheat, cotton and corn close lower. Old issues New York City bonds weak and lower.

RAILWAY GROSS EARNINGS ADVANCE, BUT NET DECREASE.

Railway operating expenses have been so high for over a year past that it has required no particular degree of foresight to prophesy the ultimate effects thereof upon net earnings. The expanding tendency of this item, operating expenses, is primarily due to the heavy increase in the cost of all materials entering into the operation of a railway, as well as to the greatly enlarged volume of wages paid to practically every class of labor; but at the same time it is probable that operating expenses have been somewhat augmented since July 1 through the operation of the new rule of the Interstate Commerce Commission which renders it necessary for many railroads to set aside each month a certain sum to offset depreciation as it occurs. Of course in the long run this regulation will prove beneficial, in that under its workings a fund will have been established for the prompt replacement of worn-out equipment, but in the meantime the rule tends to expand the item of operating expenses, and in turn to decrease the apparent volume of net earnings. In any event the tendency of net earnings for some months past has been downward. Thus he latest returns, those for September, show that while gross earnings advanced 10.2 per cent. over the same month in 1906, operating expenses increased 20.5 per cent., the effect of which is reflected in the fact that net earnings actually decreased 8.1 per cent. In other words, gross earnings aggregated $133,921,641, the actual increase over September, 1906, being $12,440,535; operating expenses amounted to $93,854,620, thus indicating a gain of $15,981,249, and net earnings were $40,067,021, the loss as compared with September, 1906, being $3,540,714.

This decrease—8.1 per cent.—on net earnings is the heaviest reported for some time past; it is, indeed, larger than any of the decreases reported in either January, February or March of the current year, in which months the influences of adverse weather conditions were actively at work. Of course, in analyzing the returns one should not forget that changes in current railway earnings can hardly be expected to show up so favorably, for comparisons are now made with a period of exceptional activity in 1906 when the measures of progress were expanding in a noteworthy way. It is true, however, that railway gross earnings will undergo some contraction from now on as the result of the unsettlement being experienced, and in fact the returns for September show that the ratio of increase on gross earnings—10.2 per cent.—was the smallest reported since

last March; and preliminary figures for October indicate a gain of only 6.1 per cent., while returns for the second week of November display a decrease.

The trend of earnings in September is set forth by the following figures, which show how gross earnings, operating expenses and net receipts contrast with the returns for September, 1906:

	1907	1906	*Inc.*
Gross earnings	$133,921,641	$121,481,106	8.1
Operating expenses	93,854,620	77,873,371	20.5
Net earnings	40,067,021	43,607,735	*8.1

* Decrease.

In order that matters as respects earnings may be more clearly illustrated, we have arranged the returns on gross earnings for September into group form, as follows:

	1907	1906	*Inc., p. ct.*
Northwestern	$8,570,465	$7,834,229	9.3
Central western	10,264,364	9,608,021	6.8
Trunk lines	35,137,387	32,338,529	8.6
Eastern	1,835,080	1,656,771	10.8
Anthracite coal	10,318,483	9,088,682	13.5
Southern	23,783,068	21,424,989	11.0
Southwestern	19,484,023	17,428,124	11.8
Pacific	24,528,771	22,101,761	10.9
Total	133,921,641	121,481,106	10.2

It will be seen that every group shows an increase, the percentages ranging from 13.5 per cent. in the case of the anthracite coal roads down to 6.8 per cent. reported by the central western lines.

This table gives the net earnings for the various groups:

	1907	1906	*Dec., per ct.*
Northwestern	$2,680,400	$3,008,038	10.9
Central western	2,818,265	3,030,561	6.9
Trunk lines	10,008,806	11,238,703	10.9
Eastern	687,128	644,203	6.6
Anthracite coal	4,002,747	3,659,733	*9.3
Southern	6,058,524	6,038,857	*0.3
Southwestern	6,000,167	6,622,060	9.3
Pacific	7,810,984	9,365,580	16.6
Total	40,067,021	43,607,735	8.1

* Increase.

A glance at the above shows that decreases are the rule, as there are only two groups reporting increases—the anthracite coal, 9.3 per cent., and the southern, a fraction of 1 per cent. On the other hand, the Pacific roads display a loss of 16.6 per cent., while the northwestern and trunk lines each report a decrease of 10.9 per cent. The southwestern roads contribute a loss of 9.3 per cent., the central western 6.9 per cent. and the eastern 6.6 per cent. Speaking of percentages makes this table, which shows the trend of gross and net earnings for nine months of the calendar year, quite apropos:

	Per cent. inc. *Gross,* 1907	*Net,* 1907
January	8.2	*2.4
February	7.7	*5.9
March	10.2	*0.2
April	23.6	25.5
May	19.3	17.5
June	15.7	10.6
July	16.0	5.4
August	12.4	1.4
September	10.2	*8.1

* Decrease.

Many of the individual roads report losses in net earnings from September, 1906, but only the more important are set forth in the following:

Southern Pacific	$714,127
Union Pacific	559,395
Pennsylvania, east of Pittsburgh and Erie	467,000
Atchison	458,840
Erie	370,406
Minneapolis, St. Paul & Sault Ste. Marie	341,817
St. Louis & San Francisco	319,098
Canadian Pacific	286,579
Illinois Central	236,352
Baltimore & Ohio	233,800
Louisville & Nashville	177,363
Atlantic Coast Line	172,939

While decreases are most conspicuous, there are some exceptions to this tendency. Thus the Delaware & Hudson returns a gain in net earnings of $214,521, the Chesapeake & Ohio shows an increase of $135,906, the Kansas City Southern reports an increment of $113,000, and the Reading displays an advance of $110,000.

A COMPREHENSIVE RULING ON EXTRADITION.

At intervals the courts, not unmindful of their function of deciding the specific point presented in cases coming before them, but embracing the opportunity afforded by certain cases to deal with questions in a comprehensive and general way, enunciate decisions which go far to clear up difficulties arising out of differences in practice and to give consistency of treatment to certain branches of the law. Of this nature is the decision by the Supreme Court of the United States this week in the case of one McNichols, who, having been arrested in Illinois and held for extradition to Wisconsin on a charge of pocket-picking in Kenosha two years ago, sought relief from custody by means of a writ of habeas corpus. The court laid down the general proposition that a person charged with crime against the laws of a state and who flees from justice, that is, after committing the crime leaves the state in whatever way or for whatever reason, and is found in another state, may under the authority of the constitution and laws of the United States be brought back to the state in which he stands charged with the crime, to be there dealt with according to law.

When the executive authority of the state whose laws have been violated makes a demand upon the executive of the state in which the alleged fugitive is found for the surrender of the latter—such demand being in the form indicated by section 5278 of the Revised Statutes—and produces at the time of such demand a copy of the indictment, or an affidavit certified as authentic and made before a magistrate charging the person demanded with a crime against the laws of the demanding state, it is under the Constitution and laws of the United States the duty of the executive of the state where the fugitive is found to cause him to be arrested, surrendered and delivered to the appointed agent of the demanding state, to be taken thereto. It is to be borne in mind, however, that the executive upon whom the demand is made is not authorized by the Federal Constitution and laws to cause the arrest of one charged with crime in another state unless he is a fugitive from justice, and such executive may therefore decline to issue an extradition warrant unless it is made to appear to him by competent proof that the accused is substantially charged with a crime against the laws of the demanding state, and is therefore a fugitive from justice.

Furthermore, the question whether a person is a fugitive from justice may, so far as federal requirements are concerned, be determined by the executive upon whom the demand is made in such a way as he deems satisfactory, and he is not obliged to demand proof, apart from proper requisition papers from the demanding state, that the accused is such a fugitive. When, however, it is determined that an alleged criminal is a fugitive from justice, whether such determination is based upon the requisition and accompanying papers in proper form, or an original independent inquiry into the facts, and a warrant of arrest is issued after such determination, the warrant may be regarded as making a prima facie case in favor of the demanding state, and as requiring the removal of the alleged criminal to the state where he stands charged with crime, unless in some appropriate proceeding it is made to appear that he is not a fugitive from the justice of the demanding state.

For the determination of the question whether the accused is subject by virtue of the warrant of arrest to be delivered up as demanded, a proceeding by habeas corpus in a court of competent jurisdiction is appropriate, and one arrested and held as above indicated is entitled of right in such a proceeding to question the lawfulness of his arrest and imprisonment, and to show by competent evidence as a ground for his release that he is not within the meaning of the Constitution of the United States a fugitive from justice, thus overcoming the presumption to the contrary arising from the face of an extradition warrant. On the other hand, where a person is held in custody as a fugitive from justice under an extradition warrant in proper form, and showing upon its face all that is required by law to be shown as a prerequisite to being issued, he should not, according to the court, be discharged from custody unless it is made clearly and satisfactorily to appear that he is not a fugitive from justice within the meaning of the Constitution and laws of the United States. Mr. Justice Harlan, who writes the opinion of the court of last resort, says that a faithful and vigorous enforcement of the constitutional and statutory provisions relating to fugitives from justice is vital to the harmony and welfare of the state. It may be added that the clear and comprehensive statement of the law made in the opinion should have a pronounced influence in aiding in that enforcement and in inducing greater harmony in the practice in cases involving matters connected with extradition.

BUILDING ACTIVITY STILL CONTINUES.

October expenditures for building were of large volume despite the unsettlement in financial affairs, which by the nature of things, however, was not operative as a discouraging element in this particular line until late in the month. In this connection, too, it needs to be borne in mind that the building expenditures in the various cities are the totals of estimates of probable cost of future erections, and cannot be classed as actual expenditures in the particular month specified. The statistics, in fact, are less even than are the bank clearings in normal times, a reflection of the current business of the country. In the case of bank clearings, the statistics are, in fact, usually a recording of business that has been done, while building permits are something like a forecast of work yet to be done. For this latter reason, however, the October building estimates are encouraging, because they point to a disposition to undertake new enterprises, and it will be interesting to watch future months' records to see whether the lowered cost of building material in recent months is proving in the nature of an offset to other influences, such as tight money, which have been a check to new undertakings in many lines.

The total estimated expenditures for new buildings permitted for at seventy-five cities of the United States for October were $52,177,706, as against $53,290,870 in the same month of 1906, and only $44,968,679 in the month of September. There is here shown a decrease of only 2 per cent. from October last year, and a gain of 16 per cent. over September, 1907. Following will be found the detailed returns from seventy-five American cities for the month of October, with the percentages of gain or loss from October a year ago:

	Oct., 1907	*Changes from year ago* *Inc.*	*Dec.*
Allegheny, Pa	$164,017	....	3.5
Atlanta, Ga	228,288	....	51.0
Berkeley, Cal	371,500	31.1	....
Buffalo, N. Y	631,500	27.9	....
Chattanooga, Tenn	121,979	....	50.2
Chicago, Ill	4,957,100	....	6.9
Cleveland, Ohio	4,255,397	309.9	....
Columbus, Ohio	399,460	....	16.2

* New work. † Alterations.

Something like an even break between the gains and losses as compared with October a year ago is here shown, thirty-eight cities showing increases, while thirty-seven report a falling off. One probably very significant feature here is the renewal of activity apparently shown at New York City after a long period of declining totals. Here a gain of 11.7 per cent. over October, 1906, and of 27.5 per cent. over September, 1907, is indicated. This tendency will evidently bear future watching, but it is still too early to draw any hard and fast conclusions because of the fact that permits filed for a few large buildings will often warp a total considerably. Curiously enough, however, the boroughs of Manhattan and Queens, two rather widely differing sections of the city, furnish the larger gains, while Brooklyn shows a large

decrease. The immense increase at Cleveland needs explanation, which comes in the statement that one of the permits there is for a $3,000,000 courthouse, which is expected to be a long time building, and which if deducted from the total estimated expenditure at that city would leave a comparatively moderate gain over October, 1906, and September, 1907. It might be noted that the Minneapolis expenditure is the largest ever recorded for October. Also, if the ten largest cities of the country as regards building expenditures are examined, it is found that only four—New York, Cleveland, Seattle and St. Paul—show a larger expenditure in October this year than last, while seven—New York, Cleveland, San Francisco, Seattle, St. Paul, Milwaukee and Detroit—show a larger expenditure in October than in September.

The expenditures at five Canadian cities for October aggregate $1,371,332, as against $3,078,545 in October, 1906, and $1,693,276 in September, 1907. There is here shown a decrease of 19 per cent. from September, and of 55.4 per cent. from October last year.

TEXAS CREDIT MEN SPEAK.

The Dallas and Fort Worth Associations of Credit Men have united in a circular appeal to the credit men of the United States in which they offer some suggestions as to the wisest policy to be pursued by creditors in the present condition of business. They say there can be no doubt in the world that as soon as Texas can market her products, her merchants and financial institutions will be in excellent condition, but until the outside world can furnish money to pay for these products, it is clear that debtors cannot pay and creditors must be indulgent. They further say: "The jobbers and banks of the state of Texas are a unit in their determination not to press any solvent debtor until these products can be realized upon. To do otherwise would force solvent concerns into bankruptcy, which would postpone the date of payment of their debts, thus working a hardship on both the debtor and creditor, to no purpose. This is the sensible course to pursue, and the Dallas and Fort Worth Associations of Credit Men take this opportunity of recommending that the banks and jobbers outside of the state of Texas pursue the same course toward their debtors in this state, feeling assured that the local jobbers and banks will not attempt to take any advantage whatsoever, but allow their debtors to pay as rapidly as possible, and to prorate their payments among creditors both within and without the state. If all will pursue this course there can be no question but that within a very short time the commercial interests of this state will be in most excellent condition, and, another year, will be in position to extend the same amount of trade as heretofore, with every assurance that the same will be paid for promptly as in past years. We therefore urge upon all creditors outside of the state of Texas the necessity of forbearing to crowd their customers too severely, and not to force solvent merchants into bankruptcy."

In the same circular is a statistical exhibit of the value of the crops of Texas this year, which with the values of the lumber, petroleum and petroleum products of the state aggregate $450,000,000 to the credit of the state, to the debit of the rest of the world—a debit which will soon be paid in good sound cash, since the world must be supplied with the necessaries of life. The circular further says: "Texas was prosperous before the financial flurry and Texas is solvent and prosperous to-day. Its prosperity is based not upon stocks or bonds with fictitious values, but upon actual products in hand, and is a prosperity which must be enduring. There is every reason why patience, prudence, common sense and cheerfulness should prevail. The situation here, as we see it to-day, surely warrants the largest possible confidence. Texas was and is sound, healthy and prosperous. Instead of finding fault with temporary inconveniences, let us all heartily coöperate for the common good by promoting that confidence everywhere which is so absolutely essential to national prosperity."

EDITORIAL NOTES.

Foreign trade figures for October reflect the influence of financial unsettlement in delaying or discouraging slightly both export and import trade. Thus the exports for that month fell 3.6 per cent. behind those for October a year ago, while imports fell off 5.3 per cent. Both imports and exports, however, gained as compared with those of September, the increases being 11.1 per cent. in the case of imports and 33.3 per cent. in the case of exports. The imports and exports of merchandise for October and the ten months of the calendar year compare with corresponding periods of 1905 and 1906 as follows:

October	1905	1906	1907
Imports—Free of duty.	$49,655,046	$52,513,067	$49,036,143
Dutiable	57,779,863	65,615,285	62,775,839
Total	107,444,909	118,128,352	111,811,982
Exports—Domestic	152,047,411	185,494,593	178,614,686
Foreign	2,325,568	1,858,755	1,944,778
Total	154,372,979	187,353,348	180,559,464
Excess of exports.	46,928,070	69,224,996	68,747,482
Ten mos. ending Oct.			
Imports—Free of duty.	436,107,597	469,055,111	548,318,811
Dutiable	543,609,840	597,340,358	671,675,543
Total	979,717,437	1,066,395,469	1,219,994,354
Exports—Domestic	1,233,639,977	1,404,029,486	1,488,190,401
Foreign	23,284,377	21,158,286	23,957,759
Total	1,256,924,354	1,425,187,772	1,512,148,160
Excess of exports	277,206,917	358,792,303	292,153,806

The statistics for the ten months still reflect the play of past liberal movements in a gain over the same period of 1906 of 14.3 per cent. in imports and of 6.1 per cent. in exports. The excess of exports over imports for the calendar year to date is $292,153,806, as against $358,792,303 in the preceding year. Exports of gold for the ten months aggregate $52,992,352, a gain of $10,127,846 over the same period a year ago, but imports to October 31 this year were only $35,343,130, as against $139,026,869 a year ago. The excess of imports over exports at that date a year ago was $96,162,363, but it might be noted that gold imports since November 1 at New York are larger than the imports for the preceding ten months, and the November imports as a whole promise to be almost double the imports for the ten months of 1907 ending with October 31.

The Bureau of Statistics of the Department of Commerce and Labor has recently compiled some data on the progress of the United States during the past decade. Many of the figures have already been published, but we think that if the figures were arranged in group form, as below, they would become more interesting for record purposes. This table gives the more important facts reported by the Bureau of Statistics:

	July 1, 1907	*July* 1, 1906	*July* 1, 1897
Money in circulation:	$2,773,000,000	$2,736,000,000	$1,640,000,000
Savings bank deposits:	3,495,000,000	3,299,000,000	1,983,000,000
All bank deposits:	13,000,000,000	12,250,000,000	5,000,000,000
Public debt, less Treasury cash:	878,000,000	964,000,000	987,000,000
Per capita indebtedness:	10.26	11.46	13.78
Annual interest public debt:	21,666,000	23,250,000	34,133,000
Annual interest per capita:	.25	.28	.48
Imports merchandise:	1,434,000,000	1,227,000,000	765,000,000
Exports merchandise:	1,854,000,000	1,718,000,000	1,032,000,000
Imports crude materials for manufacturing:	477,000,000	415,000,000	196,000,000
Imports for further use in manufacturing:	274,000,000	220,000,000	88,000,000
Exports crude materials for manufacturing:	503,000,000	503,500,000	297,000,000
Manufactures for further use in manufacturing:	259,000,000	226,000,000	98,000,000
Manufactures ready for consumption:	481,000,000	460,000,000	213,000,000

During the decade from July 1, 1897, to the same date in 1907, money in circulation has increased 69 per cent., savings bank deposits 76 per cent., and all bank deposits 160 per cent. In the same period the public debt has decreased 11 per cent., the per capita indebtedness over 25 per dent., the annual interest charge on the public debt more than 36 per cent., and the annual interest per capita over 47 per cent. Within the decade mentioned imports of merchandise have advanced 87 per cent. and exports 79 per cent.

Among the interesting developments of the week is one relative to the large holdings of the Union Pacific Railroad Company in the stocks of the St. Paul, Northern Pacific and Great Northern roads. It is stated that within the past fortnight or so the Union Pacific Company has disposed of practically all its full paid shares in the before-mentioned companies, and in lieu thereof has bought an equal amount of the part paid subscriptions for the same. At the time of the Interstate Commerce Commission's investigation of Union Pacific matters, it appeared that the Union Pacific held $3,690,000 of full paid St. Paul stock, $15,436,000 of Great Northern and $13,352,800 of Northern Pacific. The inducement for the exchange, which is now understood to have been effected, is found in the fact that there is considerable difference between the prices for the full paid stocks of the companies and the part paid subscriptions for the new stock, amounting, in the case of the St. Paul, to about 10 points, the subscriptions having sold at 85, while the regular stock is 95. By this operation the Union Pacific thus retains its interests in the other companies at a profit in making the conversion, while it furthermore secures time in completing the payments, and retains in its possession a large part of the proceeds of the original stock. This development would, in addition, furnish a fairly adequate explanation for the weakness which has been seen in the securities in question for some time past.

Various stock issues, both railroad and industrial, have fallen this week to lower quotations than they have touched during the present downward movement or in fact for some years past. It has, however, been noted already in these columns during the past month that one of the most unpleasant features in the disorganized investment market has been the absence of any demand for bonds, and in numerous cases an utter lack of bids for securities of that description, even those which would ordinarily be classed and quoted among the high-grade issues. This phase of the situation has been emphasized by the events in the stock market of the present week, in which additional weakness in some of the bonds which are active and prominent in the market was the outcome of decided downward movements. These demonstrations, in fact, had an unsettling effect on the tone of the entire market, and offset in a large degree the favorable influences which were created at the beginning of the week by the announcements regarding the issuance of $50,000,000 of new Panama canal 2 per cent. bonds by the government, and in addition to the same of $100,000,000 one-year 3 per cent. notes, to serve as a basis for an increase in the national bank circulation. The fact that such securities as the United States Steel second 5s and the Chicago, Rock Island & Pacific 4 per cent. collateral trust obligations had further breaks in the face of the good news was likewise rather unsettling. In the case of the Steel bonds, the inference is that parties who exchanged holdings of Tennessee Coal stock for the same have been obliged to market the bonds in order to meet maturing loans, while the inference is equally plain that the remarkable decline of the Rock Island collateral 4s represents a liquidation on the part of overloaded interests identified with the Rock Island-Frisco system.

As usual, the annual report of the Great Northern Railway is a document of considerable interest, the one for the twelve months ending June 30, 1907, being another exhibition of the efficiency in operating which has made its management famous. The company, as might be expected, while showing a satisfactory increase in the total volume of traffic and gross earnings, was obliged like other roads to encounter a heavy increase in expenses, so that the ratio of the latter to the gross was 62.77 per cent., against 53.87 per cent. in the preceding year, and the net income, including miscellaneous receipts, was $21,978,111 against $23,722,071. An interesting and instructive feature of the showing is the way in which the Great Northern economizes its train service, so that the gross receipts for each mile run by its freight trains was $4.27, an increase of 2 cents, which is far in excess of the average performance of the country's railways. Another feature is the increase of the average train load from 530 tons to 549 tons, the Great Northern in this respect being surpassed only by some of the eastern bituminous coal systems. This shows what may be termed unequaled efficiency in the conduct of the road's traffic, which may be explained in part by the policy pursued since the system was built of turning such a large proportion of its earnings to equipment and improvements. This year's report, for instance, shows an appropriation of $4,934,581, or about 20 per cent. of the net, to such purposes, in addition to $1,894,381 charged in the operating expenses for extraordinary expenditures, so that the earnings furnished in all $6,978,217 for purposes calculated to make for the more economical handling of business.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

New Jersey Automobile Law Valid.

The New Jersey Court of Errors and Appeals sustained the constitutionality of the Frelinghuysen automobile law in the case of Unwin vs. The State.

Contract—Minor—Repudiation—Title.

The repudiation after becoming of age of a contract to pay for merchandise furnished to a person during his minority does not revest title in the vendor, according to the decision of the Supreme Judicial Court of Maine in the case of Lamkin et al. vs. Ledoux.

Contractor—Checks—Employees.

The Supreme Court of Colorado held, in the case of Good vs. Johnson, that paying employees of a sub-contractor with its own checks does not estop a contractor from denying its relation of master to such employees where the checks on their face show that they are on account of the pay roll of the sub-contractor.

Insurance Policy—Stipulation—Default.

The Supreme Court of Iowa held, in the case of Collman vs. Equitable Life Assurance Society, that a contract requiring the return of a life-insurance policy duly receipted within six months after default in payment of premiums, to entitle the holder to a paid-up policy for a proportionate amount, and providing that if this was not done the policy should cease and all premiums paid thereon should be forfeited, was not forbidden by public policy.

City Charter—Debt Limit.

The Supreme Court of Minnesota held, in the case of The American Electric Company vs. City of Waseca et al., that while the general statutes of the state limit the indebtedness of cities to 5 per cent. of the assessed valuation of the taxable property, this provision does not apply to cities like the one involved in the suit, whose charters fix the limit at 10 per cent. In other words, charter provisions prevail over the general statutes except where the charter contravenes the public policy of the state.

Railroad—Assessment—Reduction.

The Central Railroad Company of New Jersey, in a case before the New Jersey Court of Errors and Appeals, questioned the right of the State Board of Equalization of Taxes to reduce certain assessments on the ground that they were higher in proportion than assessments on other property. The specific appeal was from certain assessments on second-class railroad property in Newark, levied in 1906. The court's decision was to the effect that all property must be assessed at its true value, and that assessments cannot be reduced on appeal where they do not exceed the value of the property.

Automobile—Stopping—Signal.

The Supreme Court of Indiana held, in the case of State vs. Goodwin, that under section 5 of the acts of 1905, when a driver of a motor vehicle meets two or more persons driving together in a buggy drawn by a horse and is signaled to stop "by putting up the hand" by one of the occupants of such buggy other than the one who is managing the horse, it is his duty to stop the motor vehicle and allow the horse to be driven past, and he is liable to prosecution for failure to do so, just the same as if the signal had been given by the driver actually holding the reins and controlling the horse. The court further held that an averment in an affidavit charging the offense of failing to stop an automobile under such circumstances, that the person riding with the driver gave such signal for and on behalf of the driver, was surplusage.

Greater Pittsburgh Bill Valid.

The Supreme Court of the United States on Monday rendered a decision sustaining the validity of the legislation providing for the consolidation of the cities of Pittsburgh and Allegheny, holding that the constitutional questions raised on appeal did not justify the federal court in interfering with the judgments of the state courts finding the legislation constitutional. The court, speaking through Justice Moody, laid down the general proposition that municipal corporations are political subdivisions of the state created as convenient agencies for exercising such of the governmental powers of the state as may be intrusted to them, adding: "The state at its pleasure may modify or withdraw all such powers, may take without compensation such property, hold it itself or vest it in other agencies, expand or contract the territorial area, unite the whole or a part of it with another municipality, repeal the charter and destroy the corporation. All this may be done conditionally or unconditionally, with or without the consent of the citizens, or even against their protest. In all these respects the state is supreme, and its legislative body, conforming its action to the state constitution, may do as it will, unrestrained by any provision of the constitution of the United States. Although the inhabitants and property owners may by such changes suffer inconvenience, and their property may be lessened in value by the burden of increased taxation, or for any other reason, they have no right by contract or otherwise in the unaltered or continued existence of the corporation or its powers, and there is nothing in the Federal Constitution which protects them from these injurious consequences. The power is in the state, and those who legislate for the state are alone responsible for any unjust or oppressive exercise of it."

Employer's Liability—Coal Mine.

The Supreme Court of Indiana held, in the case of Antioch Coal Company vs. Rackey, that allegations charging that the defendant, owner of a coal mine failed to discharge its statutory duty of requiring its mining boss to visit the place where the plaintiff, a miner employed by the defendant, was at work, and failed to prop the roof of the mine or to take down loose slate, and that the plaintiff thereby sustained an injury from the fall of slate from such roof sufficiently stated a cause of action. The court further held that it could not be said as matter of law that a miner was guilty of contributory negligence because he did not test by tapping, before he went to work under it, a roof that looked to be sound; that he was not bound to inspect to discover hidden dangers, and that as the work of driving the mine deeper proceeded day by day, accompanied by blasting each evening, it was the statutory duty of the employer, through its mine boss, to see that the room was made safe after each blast by propping, taking down slate, etc., before the miners resumed work thereunder.

Arbitration—Award—Damages—Fire.

An action was brought by a bank against an insurance company to enforce an award made by arbitrators as to the damages done to the bank building by a fire, on which building the bank had a policy of insurance in said company, which policy gave the company an option to repair, rebuild or replace property lost or damaged within a reasonable time, on thirty days' notice of its intention to do so after receipt of proofs of loss. The Kentucky Court of Appeals held, in the case of German Insurance Company vs. Hazard Bank, that a letter written to the owner of the building after the award was made, offering to repair or replace the building, accompanied by a cash offer to pay a certain sum as a compromise of the damages, was not a proper or sufficient notice of an election to rebuild, and that the fact that the umpire selected by the two arbitrators agreed on was not a professional builder and did not rely on his own judgment as to the amount of damages, but consulted a professional carpenter whom he secured to view the premises, did not disqualify him for acting in the premises or invalidate the award.

Contract—Fraud—Misreading.

The Kentucky Court of Appeals held, in the case of The Western Manufacturing Company vs. Colton et al., that a written contract may be impeached in Kentucky for fraud practiced either in its execution or in obtaining it, and that whether it contains the true agreement of the parties or was induced by the fraudulent misrepresentations of one of them, or whether it fails because of the fraud of a party, as by surreptitiously substituting a false paper for the true one, or by misreading the contents of the paper, or its execution was procured by force or duress, the party not in fault when sued upon it may plead the fraud in avoidance of the recovery. The court further held that in an action on a written contract the presumption is in favor of the writing and the burden is on the one who attacks it, and the rule is that the fraud or mistake alleged must be established by plain and satisfactory proof. The court added that in an action on a written contract which the defendant claims that he signed without reading, and that the plaintiff's agent misread it to him, if the fact be conceded or established that one party fraudulently misread the paper so as to create the impression that the paper as read contained the contract agreed upon, the baseness of the party committing the fraud is not offset in law by the mere negligence of the other party, who relied on what he had no reason to doubt.

BUSINESS NOTES.

Immense Saltpeter Beds.

Anibal Cruz, minister from Chile to the United States, said recently that reports that the immense beds of saltpeter found in that country will be exhausted in a few years are erroneous. "Those beds will not last merely a hundred years or two hundred, but will be helping to make Chile wealthy a thousand years from now. Chile is the only country in the world in which such deposits of saltpeter are found. They are for the most part owned by Germans and Englishmen. The Germans are the most heavily interested, with the English next. Most of the saltpeter is exported to Hamburg, while some of it goes to Liverpool. The Chilean government derives a large amount of revenue from this export trade, as a duty of about 2 shillings a ton is exacted on all that is sent out. The revenue amounts to 80,000,000 or 90,000,000 shillings each year."

World's Petroleum Production.

The following table, taken from an advance chapter from "Mineral Resources of the United States, Calendar Year 1906," on the production of petroleum in 1906, by W. T. Griswold, gives the figures of the world's production of crude petroleum for the last three years. The slight decrease in production noted in 1905 as against 1904 is shown also in 1906 as against 1905. This is due in 1906 chiefly to the decrease in output in the United States.

	1904	1905	1906
United States	117,080,960	134,717,580	126,403,036
Russia	78,536,655	54,950,270	59,043,829
Sumatra, Java and Borneo	6,316,769	7,334,310	7,399,024
Galicia	5,047,383	5,765,317	5,467,967
Roumania	3,593,025	4,420,987	6,378,184
India	3,385,468	4,137,098	4,015,853
Japan	1,418,767	1,341,157	*1,341,157
Canada	552,575	634,095	569,753

* Estimated.

Iron Content of Ores Mined.

Writing on the general subject of iron ore, the *Iron Trade Review* says: "In the proportion of iron-ore production to production of pig iron in 1906 there is no evidence of any material decrease in the average iron content of the ores mined, as compared with immediately preceding years. Dividing the iron-ore production in 1906 by the pig-iron production gives a quotient of 1.887, approximately the number of tons of iron ore per ton of pig iron; the quotient in 1905 was 1.850, while taking the production in the five years 1900-04, inclusive, the quotient comes out 1 886, substantially the same as that for 1906. In 1890 it was 1.742 and in 1895 it was 1.689. There was a decrease, as in 1895 the richer Lake Superior ores were making their way to the relative exclusion of lower grade ores in various parts of the country. The increase in ore per ton of pig iron from 1895 to the years of the present century shows the increase in the mining of Lake Superior ores in the direction of lower grade ores. Much has been said lately about the decreasing content of Lake Superior ores, and it is interesting to note that statistics for as late a year as 1906 do not tell any story upon the this subject."

Coke Works in the United States.

The total number of establishments manufacturing coke in the United States at the end of each calendar year from 1900 to 1906 was as follows, the term "establishment" being used to designate the number of separate plants or banks of ovens, whether operated or idle and whether reported from one central office or not, different plants controlled or operated by one company being considered as separate establishments:

1900	396	1904	506
1901	423	1905	519
1902	456	1906	532
1903	500		

The 532 establishments at the close of 1906 included fifteen with a total of 1,887 ovens which were not completed or had not been put in blast during the year and consequently did not contribute to the production. In addition to these there were idle during the year sixty-nine plants having a total of 5,305 ovens. Most of these plants were comparatively small, having an average of seventy-seven ovens each. The majority of them have been idle for several years, and some of them have been practically abandoned. On deducting the idle plants and those not completed before the end of the year, it is found that 448 plants, with a total of 89,596 ovens, were in active operation during 1906, an average of 198 ovens to each plant. The total production from these establishments was 36,401,217 short tons, or an average of 81,253 tons for each plant. In 1905 the total production from 434 active plants was 32,231,129 short tons, an average of 76,265 tons each. The average output of each plant was therefore 9.4 per cent. greater than it was in 1905.

Lake Traffic in 1907.

The *Wall Street Journal* presents this table of traffic operations on the Great Lakes in 1907, the figures for the last three months being partly estimated. According to these estimates, the total amount of freight entering into the lake traffic during the twelve months of 1907 will fall little, if any, short of 82,000,000 tons. The exact total in 1906 was 73,183,526 tons, and 65,395,161 tons in 1905. These represent receipts. Shipments are in most cases 2,000,000 tons higher, and may this year be as much as 3,000,000 tons. But taking the lower of the two sides of the account, the total given above represents a gross tonnage with which no other similar movement in domestic traffic compares. The monthly operations for three years, as exhibited in the following table of lake receipts (in tons), show to what extent traffic tends to be concentrated into six or seven months:

	1907	1906	1905
January-March	1,000,000	1,030,000	714,000
April	2,469,000	3,180,000	2,120,000
May	9,669,000	7,451,000	8,131,000
June	11,419,000	9,563,000	8,853,000
July	11,098,000	10,461,000	9,328,000
August	11,235,000	10,430,000	9,508,000
September	11,105,000	10,082,000	8,039,000
October	*10,500,000	9,259,000	8,629,000
November	*9,500,000	8,550,000	7,293,000
December	*4,000,000	3,218,000	2,796,000
Total	81,995,000	73,185,000	65,411,000

* Estimated.

American Equipment for Japanese Railways.

According to the *Railway Age*, "American builders of railway rolling stock are profiting by the Japanese development of railways in southern Manchuria. The line from Chanchung to Port Arthur and Dairen, 450 miles, is completed and the locomotives and cars for its operation have been ordered in the United States. The first order for locomotives was placed with the American Locomotive Company and was one of the largest for foreign shipment ever given in this country, including in all 183 locomotives of different types. It is strong testimony as to the excellence of American practice in locomotive and car design to know that the Japanese engineers who investigated the subject decided that all of the engines should be of American design, and American locomotive practice was pursued throughout. Instead of using the narrow track gauge of Japan they adopted the standard gauge of the United States; and the rolling stock of the Manchurian lines will compare favorably in size and weight with that in general use in the United States. These developments will warrant a railway system as large as that of some of our larger states and call for a vast amount of equipment and railway supplies. These initial orders should lead to an extensive export business in such material."

Our Trade with Various Countries.

Official records show that Canada takes 60.6 per cent. of all its imports from the United States and sends thereto 38.1 per cent. of all its exports. Mexico took 65.9 per cent. of her imports from the United States and sent 68.6 per cent. of her exports to this country. The Central American states take a large share of their imports from the United States: Honduras, 63 per cent.; Nicaragua, 55 per cent.; Costa Rica, 54.5 per cent.; Guatemala, nearly 45 per cent., and Salvador, 31 per cent.; while of their exports Honduras sent to the United States in the latest year for which figures are available 87 per cent.; Nicaragua, 50 per cent. Costa Rica, 47 per cent.; Guatemala, 35 per cent., and Salvador, 22 per cent. Cuba took in 1906, the latest year for which statistics are at hand, 48.6 per cent. of her imports from the United States and sent to us 84.8 per cent. of her exports, chiefly, of course, sugar and tobacco. Brazil took 11.4 per cent. of her imports from the United States and sent to us 35.1 per cent. of her exports. China took in 1906 10 per cent. of her imports from the United States and sent to us 10 9 per cent. of her exports; and Japan took 16.7 per cent. of her imports from this country and sent to us 29.7 per cent. of her exports. The United Kingdom, the largest importing country of the world, took 21.6 per cent. of her imports from the United States and sent to us 7.4 per cent. of her exports; while Germany took 13.9 per cent. of its imports from the United States and in return sent to this country 9.5 per cent. of its exports.

CURRENT BUSINESS NEWS.

Commercial.

The sisal hemp growers and dealers in Yucatan have entered into a combination to bring about an increase in prices. It is said that the National Bank of Mexico has agreed to advance money to the planters on their crop so that they can hold the product until United States manufacturers of rope and twine come to terms. The stock on hand is said to be very large.

The imports of diamonds and other precious stones at New York for the first ten months of this year, as compared with the corresponding period of last year, show a falling off of more than $6,000,000, or about 16 per cent. Importers believe for the entire year the falling off will be about $10,000,000. It is usual for the imports to soar in the last two months of the year because of the holiday trade, but November's showing up to the present time is even worse than October's. The diamond cutting industry in New York has not suffered, as the imports of uncut stones, 90 per cent. of which are diamonds, amounted in the ten months to more than $8,000,000, which is not far below the total for ten months of the year before. The loss comes in the cut stones and pearls, which are grouped together in the customs reports, as these imports are dutiable, while stones in the rough are free of duty.

Statistics of the postal receipts at the fifty largest post offices in the country show that during October the aggregate revenue of the postal service was $8,228,062, as compared with $7,924,879 in October of last year, or a net increase of only $303,183. The New York postal receipts showed a decrease of $118,087 from the receipts in October of last year, the total receipts being $1,606,272, as compared with $1,724,359 last year. The Brooklyn office also showed a decrease from $217,767 in October last year to $209,090 in the same month of this year. Dayton, Ohio, showed the largest increase during the year, the receipts increasing from $41,754 last year to $54,827 in October this year, an increase of about 31 per cent.

The aggregate trade of Canada for the seven months ending with October shows an increase of about $28,000,000 as compared with the corresponding period of last year. The increase is in imports. The total imports for the period were $226,395,000, a gain of $31,384,000, while the exports were $165,227,000, a decrease of $2,515,000.

A commercial convention between Great Britain and the United States was signed at the British Foreign Office Tuesday between Foreign Secretary Grey and Ambassador Whitelaw Reid, under which British works of art will henceforth be admitted to the United States at one-quarter less than the present duty. In return, American commercial travelers' samples will be admitted free at British ports. It is thought that the latter will tend to stimulate United States exports to Great Britain. The reduction of the duty on works of art from Great Britain was secured under section 3 of the present tariff act. In future the duty will be only 15 per cent.

During the months of September and October the United Kingdom imported from various countries 5,011,854 quarters of wheat, including flour as wheat. The largest share came from the United States, followed by India, with Canada as third. This total is an increase over that for the two months of 1906, when 4,327,054 quarters were imported. Then, as now, India ranked second, with 846,137 quarters, compared with 1,247,213 quarters in September-October of this year.

Minister Bryan reports that the corn crop of Portugal has been partially destroyed.

Consul E. L. Harris states that at the present time there is undoubtedly a market for American flour in Smyrna and in the interior of the Vilayet of Aidin.

Consul-General G. B. Ravndal, of Beirut, says that "owing to flour scarcity in Turkey, I have to suggest to the flour manufacturers and exporters of the United States that they immediately send samples and also best terms to the principal consuls."

Consul G. H. Jackson, of La Rochelle, states that it is announced officially that the combined services of the French steamship companies known as the Chargeurs Reunis and Messageries Maritimes, operating a line from Antwerp to San Francisco, will hereafter call at the French port of La Rochelle. The sailings are three weekly, and the first will take place in December next.

American sales to Europe, United Kingdom included, for nine months ended September 30 were $43,592,000 more than those of the corresponding period in 1906. Sales to neighbors of the western hemisphere, although only about 40 per cent. of the European account, increased nearly $42,000,000. In the former case the gain has been a trifle more than 5 per cent.; in the latter, 14 per cent. Sales to the United Kingdom show an increase of $14,000,000, while the gain on the Canadian account was $19,000,000. The German account advanced $18,000,000, and that with France $7,500,000. Mexico enlarged her purchases by $6,000,000, and South America by $7,000,000, Italy's account, which in amount is about the same as that of Cuba, shows a gain of $1,000,000, while that of the latter increased $5,000,000. Sales to Argentina show a decline of nearly $1,000,000, while Brazil increased her account by nearly $4,000,000.

R. Larmour Neill's yearly estimate of the cotton crop places this year's crop at 11,395,000 bales. Of this the Atlantic states, he estimates, will yield 4,920,000 bales, the gulf states 3,575,000 bales and Texas and Indian Territory 2,900,000 bales. This compares with a crop of 13,531,000 bales last year, 11,346,000 in 1905, 10,011,000 in 1903 and 10,728,000 in 1902.

Great Britain's wheat is estimated at 55,208,000 bushels, against 59,092,000 bushels last year and 58,902,000 bushels two years ago. Oats, 168,000,000 bushels, against 123,384,000 last year and 116,437,000 two years ago.

The value of French imports in the first half of this year was $615,000,000, as compared with $565,000,000 in 1906. The value of exports was $550,000,000, as against $500,000,000 in the previous year.

Total value of imports from and exports to Cuba in the nine months ending with September, 1900 to 1907:

	Imports	*Exports*
1900	$27,100,075	$19,750,288
1901	40,607,497	19,376,555
1902	39,187,137	17,890,988
1903	50,024,388	16,752,179
1904	68,563,218	23,185,857
1905	83,593,508	31,931,220
1906	75,113,420	34,746,670
1907	84,221,713	39,627,673

Vice-Consul H. M. Byington advises that the exportation of macaroni to the United States from the Italian ports of Naples and Castellamare in 1904 amounted to $1,540,756. In 1905 this trade increased to $2,074,241, while in 1906 it reached $2,662,002. The vice-consul adds that the shipments for the present year will probably exceed $3,000,000.

Representatives of the jeweiry business are reporting general dullness in their trade. Whereas conditions were flourishing as recently as last July, they say the money stringency and stock market excitement have caused a complete change, until there is a depression unequalled, it is said, since 1893.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—North Africa: Weather conditions continue favorable and seeding has made good progress. France and Italy—There are occasional complaints heard regarding delayed seeding, but the outlook is generally favorable. Supplies are liberal. Spain—The outlook for seeding is favorable. Prices are very high, and a further reduction in the import duty is expected. Germany—There is occasional mention made of drought, but otherwise the outlook is very favorable. Supplies are very moderate, both of native and foreign grain. Austria-Hungary—Beneficial rains have fallen. Roumania—Freezing is reported after the fall of good rains, and the acreage has been reduced. Bulgaria—The acreage is short of previous years, and the condition of seedings is bad. Russia—The outlook is generally unfavorable, and the recent rains reported were insufficient to help seedings to any great extent. Latest advices report interior stocks very light, and the predictions are that shipments will be very light for the week. Turkey—The suspension of the import duty has been prolonged, and the exportation of barley has been prohibited.

The Census Bureau's report of the amount of cotton ginned, counting round bales as half bales and excluding linters, with comparisons:

Ginned to	1907	1906	1905
September 1	191,416	407,551	476,655
September 25	1,569,977	2,057,283	2,355,716
October 18	4,407,055	4,931,621	4,990,566
November 1	6,167,600	6,906,305	6,457,595

A Venezuelan decree was issued recently with the object of protecting the agricultural industries of the country. It increases 10 per cent. the duties on lard, butter, rice, wheat, corn and beer, and 25 per cent. the duties on straw paper, potatoes, milk and some grades of glassware.

Financial.

At a meeting of the stockholders of the Atlantic Coast Line Railway, Tuesday, a report of the directors was read, announcing that on account of unsettled financial conditions it had been decided not to take action regarding the annual dividend until some time in December, when a special meeting will be called for that purpose. It is said that the dividend will be for 2½ or 3 per cent. instead of the usual 6 per cent. The old board of directors was reëlected.

The Boston *Transcript* says: "The economic effects of the annual homeward journeyings of aliens may be considerable even if the calculations that each carries home the modest sum of $300 is correct. If the steerage passengers should number 400,000 it would mean the transfer of about $120,000,000 to other lands."

The following table, taken from the *Journal of Commerce*, gives a summary of the stocks, bonds and notes authorized each month this year, along with a comparison with the 1906 figures (three figures omitted):

1907	*Stocks*	*Bonds and notes*
January	$143,512	$185,500
February	29,000	84,760
March	202,322	24,550
April	63,608	112,954
May	49,200	192,332
June	20,476	170,513
July	29,250	60,800
August	143,890	144,500
September	32,450	44,081
October	43,650	54,000
Total	757,359	*1,073,990
1906		
January	$23,210	$98,904
February	36,110	241,296
March	131,808	41,400
April	48,250	133,881
May	49,955	77,555
June	7,100	107,192
July	62,551	24,800

Total	441,436	793,145
Grand total this year		1,831,349
Grand total year ago		1,233,931
Increase		597,417

* Notes responsible for $291,942.

The *Wall Street Journal* estimates that Americans will spend about $135,000,000 in Europe this year. During the first ten months of the year American tourists spent about $120,000,000 in Europe. In addition to this, there is the passage money to the various steamship lines, which amounts to about $30,000,000. The aggregate amount spent in Europe is estimated on the basis that the average American spends while abroad four times the transportation charges. The 95,000 first cabin passengers have spent for fares $14,250,000. The 100,000 second cabin passengers have contributed to the companies $6,000,000 and the 350,000 steerage passengers $8,750,000. The ratio may not hold during the remainder of the year, inasmuch as the prevailing monetary conditions are greatly affecting the cabin movement. Already numerous cancellations have been made in the bookings for the next few months. It is feared that the Mediterranean trade will be seriously affected by the slump.

The Butterick Publishing Company has deferred payment of the usual quarterly dividend of 1 per cent. on its stock.

The Terminal Bank, one of the Brooklyn institutions which closed its doors in the early stages of the financial flurry, reopened for business Thursday.

The North Butte Mining Company has passed its quarterly dividend. Three months ago $2 was paid.

A New York Stock Exchange seat was sold Monday for $51,500. The last sale was at $53,000.

President Malcolm Baxter, Jr., of the New Central Coal Company, of Maryland, states that owing to extensive improvements in their mines and general financial conditions, the directors have decided not to declare the usual dividend at this time. The dividends have been 4 per cent. per annum for the last three years. The amount of capital stock is $1,000,000.

A call for a statement of the condition of Chicago state banks at the opening of business November 19 has been published by the state auditor. The Illinois Trust & Savings Bank in its statement shows loans of $6,008,000, compared with $73,145,000 on August 12. Deposits are $87,355,000, a decrease of $7,238,000; cash and exchange, $23,063,000, an increase of $5,269,000 over the previous statement. Its cash reserves are reported as 27 per cent. Aggregate loans of all the state banks in Chicago are $220,000,000, compared with $253,000,000 three months ago. Deposits are $345,000,000, against $371,350,000 three months ago. The banks have

Wm. A. Read & Co.
INVESTMENT SECURITIES

BOSTON CHICAGO BALTIMORE

$53,000,000 in Clearing House exchanges due from banks, a decrease of $9,000,000.

According to a statement just issued by the Hon. William B. Ridgely, Comptroller of the Currency, the savings of 8,588,811 of the American people amount to $3,690,078,945, deposited in 1,415 savings banks. Compared with last year the figures are:

	Depositors	*Amount*	*No. banks*
1907	8,588,811	$3,690,078,945	1,415
1906	8,027,192	3,482,137,198	1,319
Increase in one year	561,619	207,941,747	96

This year the accounts average $429.64 each, against $433.79 last year. In not a single state has there been a decrease in the total deposit.

Railroads.

An unbroken stretch of 420 miles of grading over the line of the Grand Trunk Pacific from Portage La Prairie to Saskatoon is now completed. Three-fourths of this distance has the rails laid, and the track-laying gangs are rushing the work on the last hundred miles. By the new year this whole division will practically be ready for traffic. Three hundred and fifty miles yet remain before Edmonton is reached, and 60 per cent. of this is graded.

Industrial.

It is said that the American financial crisis is having a severe effect upon the town of Limòges, France, noted for its manufactures of chinaware. It is also reported that a leading manufacturer of porcelain has dismissed 200 employees.

A meeting of the employees of the Erie Railway, representing every branch of the service, was held at Jamestown, N. Y., Monday, to consider forming an Erie Employees' Pension Association. The company presented a plan on which it would assist the employees, and this plan was formally accepted Tuesday. It will be fully developed early in 1908.

A press dispatch reports that L. W. Fogg, statistician of the United States Steel Corporation, is of the opinion that the country's supply of coal will be exhausted in less than 100 years. Mr. Fogg says: "Iron manufactured in Pennsylvania alone exhausted for coke from 1,700 to 2,000 acres of coal last year, while over the entire country we exhausted approximately 43,000 acres of coal in 1906. Our production of coal is doubled every ten years. Should this rate of increase continue there will be grandchildren of some of our present operators who will witness the exhaustion of the entire coal territory of the United States. With this coal wealth in the ground it behooves the operator to develop his property economically and without waste, making each acre yield to him all that it contains."

The quantity of coal used in the United States in the manufacture of coke in each fifth year from 1880 to 1906 is approximately as follows, in short tons:

1880	5,237,741	1900	32,113,543
1885	8,071,126	1905	49,530,677
1890	18,005,209	1906	55,746,374
1895	20,848,323		

Miscellaneous.

For the first time in its history, the number of aliens entering this country in the month of October has passed the 100,000 mark. In the month just closed 111,513 immigrants were admitted, an increase of 11.5 per cent., as compared with 99,974 a year ago. The countries sending the largest number of these aliens were the following:

	1907	1906	*Inc.*
Austria	12,531	10,466	2,065
Hungary	15,656	12,979	2,677
Germany	5,381	4,853	528
Greece	3,110	5,685	*1,975
Italy	18,478	22,163	*3,685
Russia and Finland	16,841	16,306	535
United Knigdom	14,698	11,802	2,896
Japan	1,616	684	932
British North America	4,766	1,849	2,917

* Decrease.

The total immigration from Europe in this month was 101,638, an increase of 6,670 over last year, while the same figures for Asia were 3,086 and 1,618 respectively. The total immigration for the ten months ending with October has been 1,029,168. The immigration from Canada is still increasing. October's figures show an advance of 22 per cent. over September, 1907, and 157 per cent. over October, 1906.

The German budget of the next fiscal year, including all departments, estimates total expenditures at $687,514,600, an increase over the last fiscal year of $38,416,693.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

While a number of cities report that the tone of affairs has taken a turn for the better, actual business, taking the country as a whole, shows an increased degree of quiet both at wholesale and retail, a working out of the continued scarcity of currency at some points, of lessening activity in industry, and of the continuance of unseasonably mild weather, with its natural effect upon distribution of winter goods. There is evident in wholesale trade circles an indisposition to do business for future periods, and the large numbers of cancellations resulting from the past unsettlement are a subject of widespread discussion. In some lines, notably steel and iron and cotton goods, traders generally have set their faces against encouraging this movement, and a hopeful sign is that some buyers who were stampeded early have since reconsidered their action and asked that goods be shipped. It is also to be noted that where, as in the cases of some western markets, bargain sales were held, a fair attendance of buyers has been evoked. Still, buying at wholesale is in a high degree conservative, and the disposition is to confine purchasing to present wants. As to this latter feature, however, it might be well to remember that the day to day buying of 84,000,000 people makes up a considerable volume in the aggregate, and when conditions reach normal again many purchases, earlier requested canceled or delayed, may be reinstated and accepted. Retail trade feels the effect of the smaller movement of cereals from the farms, and although producers are reported more familiar with checks tendered in payment, lower prices now offered are a drawback to sales. Sales of cotton at the south are also small, a reflection of the scarcity of currency as well as the indisposition to sell at prices 2½ cents below the opening of the season. Cold weather, as above intimated, would be helpful in moving retailers' surplus stocks.

In industry the features are the working out more fully of the prompt slowing-down tendency noted for several weeks past, the iron and steel industry, with its kindred lines such as coke and coal, showing quickest results. The feeling is widespread that the sharper and quicker this process occurs the sooner the situation will right itself when confidence is fully restored. The lumber industry is quieter, and southern lumbering and manufacturing operations are reported less active. There are also propositions to curtail production in other lines and thus avoid unnecessary overstocking. Little development of holiday trade is noted at retail, and the feeling is that cold weather is absolutely necessary to stimulate interest in this line. Collections are rather slower, and some attention has been excited by the requests made from some states that all creditors be lenient in order that the interests of all be protected. Business failures are slightly more numerous, but are not so important as those of last or recently preceding weeks.

The usual measures of trade development point to the subsidence in demand being reflected in railway earnings and clearings. Gross receipts for October showed a gain of less than half that of September, and those recorded for the second week of November point to an actual decrease. Bank clearings showed a further marked falling off in the grand totals, and increases as compared with this week a year ago are few and slight. Foreign trade for October reflected unsettling financial developments as reducing export and import trade. October building permits recorded were larger than expected, showing only a slight decrease from October a year ago, and a gain over September.

Financial developments of the week have been mainly favorable, but secondary liquidation on strong spots has been a bar to firmer prices, and, indeed, some securities have struck new low levels. Still, even here the evidences of improvement are to be seen in the fact that a very large volume of this delayed liquidation has been possible, whereas this would hardly have been attempted some weeks ago. Gold engagements abroad have continued, and the amount engaged from November 1 to date is almost double the imports of the preceding ten months. The currency premium lessened at New York early in the week, but later on became more marked. The fact is that demands from the interior keep up strongly, which is possibly explained by the reports that country banks are taking in large quantities of currency but not making new loans, and some institutions are reported to be carrying much larger supplies than are absolutely necessary.

Detailed telegrams show, among other things, that the liquor trade is quiet, with holiday demand not as yet especially notable; that trade in groceries is rather better as a whole than that in wearing apparel—a sign that absolute necessaries have, as usual, first place in demand—and that little is doing on spring trade account in textiles, while requests for cancellations of dress goods and men's-wear woolens are more numerous.

The New York stock market has been subjected to the influence of further extensive liquidation of loans, special features being furnished by the resulting declines in both bond and stock issues, which carried prices, in a variety of cases, to the lowest point of the depression and completely overshadowed the plans of the Treasury for relieving the money market. In fact, Wall Street was rather inclined to receive the $100,000,000 note issue with disfavor, the maintenance of the currency premium and the continued stringency tending to throw doubt upon the efficiency of the promised help. At the close of the week the market was inclined to rally somewhat on covering of shorts, a decreased currency premium and gold engagements at Paris. Foreign exchange continues very erratic, with high rates for cable transfers, caused by the continuance of purchases of gold in London, and demand sterling has been very irregular, closing at around 4.87.

Considerable irregularity has been shown by the commodity markets this week, with financial conditions an important factor and speculative sentiment at a rather low ebb. Wheat inclined to strengthen early on the improved sentiment in financial markets, based on forthcoming issues of bonds, but short demand and new export business was apparently easily satisfied, and the result was an easing on the week of 1 to 2½ cents at leading markets. Corn was relatively stronger than wheat, but still shows a fractional easing, while oats are slightly firmer. Provisions inclined to strengthen early, but lost some of this later, and pork is 25 cents lower, with lard fractionally off.

Cotton is stronger as a whole, rallying sharply early in the week in sympathy with talk of easier money to come with restored confidence. This invited some realizing later and the strength ebbed, also in sympathy with the stock market and on talk of trade reaction leading to reduced consumption, although southern markets were firm, and the prospect of a lowered premium on currency was helpful. On Wednesday the issuance of an estimate of 11,395,000 bales by Neill, of Liverpool, and reports of continental buying caused another rally, aided as it was by a sympathetic disposition toward smaller crop estimates here and expectations that the ginning report on Thursday would be bullish. The ginning report on Friday showed 7,311,203 bales ginned to November 14, a decrease of 1,251,040 bales, or about 15 per cent. from last year.

The sugar trade is rather slow, with prices tending to ease and raws 10 points lower. Lack of cash affects the movement of the domestic beet and cane crops, but western beet prices have weakened more than cane quotations.

The market for pig iron is almost lifeless, and prices tend to a still lower level, though in the absence of business it is difficult to name a basis. Nevertheless, $16 seems to be the figure most frequently mentioned for southern No. 2 foundry iron at Birmingham, $18.50 at furnace in the central west, $20 for Bessemer and $18 for basic, valley furnaces, both of which prices could be shaded on desirable business. Production is being curtailed, and it is estimated that the leading interest has something over 40 per cent. of its furnaces out of blast, to which must be added the inactive plants of independent interests. At some places wages have been reduced 10 per cent. Business in steel rails is very light, although something is being done on export account. Some mills are closing down. Demand for structural material has improved. Producers of steel have virtually agreed not to cut prices, believing that as finished products have been maintained at a steady level, even during times of prosperity, a reduction is not warranted. New business in wire, bars and tinplates is moderately good, but sheets are inactive and prices are weaker. Cast-iron pipe is lower. Old material is depressed. Bituminous coal is less active and easier. Coke outputs are being reduced, the leading interest reporting over 33 per cent. of its ovens idle, but despite the lessened production, Connellsville coke is much weaker. Shipments of ore are practically at an end, and because of the blowing out of furnaces, supplies on the docks are increasing. While there are some rumors of lower prices for next season, the fact is that little interest is being displayed as regards requirements for that period. Copper is dull and weaker, but there seems to be no particular pressure to sell. The metal continues to go abroad in large quantities, principally because it can be more readily financed over-sea than here.

Foreign trade was larger in October than in September, both in imports and exports, but smaller than in October a year ago, and current returns contrast sharply with those for the year to date because of earlier large movement of merchandise in and out. The exports for October aggregated $180,559,464, while imports amounted to $111,811,982, gains of respectively 33 and 11 per cent. over September, but decreases of respectively 3.6 and 5.3 per cent. from October a year ago. For ten months the exports of merchandise aggregate $1,512,148,160 and imports total $1,219,994,354, gains of respectively 6 and 14 per cent. over the same periods of 1906.

A movement rather out of the ordinary is reflected in the building report for October. Thus the aggregate estimated expenditure at seventy-five cities of the United States for that month is $52,177,706, a decrease of about 2 per cent. from October a year ago, and a gain of 16 per cent. over September, 1907. This latter feature is especially interesting, as it seems to foreshadow more confident planning of future improvements than might have been expected, considering the financial unsettlement late in October. Whether it shows that lower prices of building material have encouraged a revival of activity after the recession shown in the summer is a question for the next months' statistics to determine. In this connection it might be noted that the plans filed in the city of New York for October are estimated to cost 11.7 per cent. more than those of October, 1906, and show a gain of 27.5 per cent. over September, 1907.

Bank clearings for the week ending November 21 aggregate $2,285,957,000, 3 per cent. below last week and 34.8 per cent. under this week last year. Outside of New York exchanges amount to $969,780,000, a loss of 2 per cent. from last week and of 19.9 per cent. from the week last year.

Business failures for the week ending November 21 number 265, against 259 last week, 212 in the like week of 1906, 224 in 1905, 193 in 1904 and 167 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending November 21 (Portland, Ore., not received) aggregate 5,103,143 bushels, against 6,192,944 bushels last week, 4,025,073 bushels this week last year and 5,518,930 bushels in 1901. For the first twenty-one weeks of the fiscal year the exports are 85,023,495 bushels, against 74,589,776 bushels in 1906-07 and 121,963,795 bushels in 1901-02. Corn exports for the week are 560,629 bushels, against 1,133,488 bushels last week and 594,861 bushels in 1906. For the fiscal year to date the exports are 19,766,891 bushels, against 17,312,296 bushels in 1906-07.

IN CANADA.

The scarcity of money is the one great drawback to Canadian trade, involving as it does a slow movement of the crops to market, the laying off of industrial employees and the closer scrutiny of credits in many lines. With it all, it is noted that actual consumptive demand continues good, collections fair to good, and there is confidence that government aid to the banks will enable the crops to be moved before the cold weather comes. Canadian banks are calling in all the loans they can and making few new ones. General trade, and especially holiday demand, is good. One instance of this is the generally good report coming from the jewelry trade. Montreal reports a considerable slowing down of industrial operations. Toronto reports a disposition there to look to foreign markets for some assistance. Winnipeg notes that grain is moving slowly, but that nearly a month still remains before the close of navigation. Labor is still scarce in British Columbia. Building expenditures at five Canadian cities for October aggregate $1,371,332, a decrease of 19 per cent. from September and of 55.4 per cent. from October a year ago. Failures for the week number 35, as against 45 last week and 27 in this week a year ago. Clearings for the week aggregate $91,848,000, a decrease of 1.2 per cent. from last week and of 4.8 per cent. from this week a year ago.

TRADE REPORTS.

There has been a falling off in the dry-goods business in New York in all departments, and there is a tendency to lower prices. The outlook for spring business is not very encouraging to converters, many of whom are trying to compromise their contracts at a loss. Collections are backward, which is ascribed to the monetary situation. The clothing business is generally weak. Cotton yarns are unsteady in price, with a tendency to go lower. Manufacturers are conservative in placing orders, though conditions have somewhat improved. Woolen and worsted yarns are in active demand and prices are high and firm. The raw silk market shows no change, business being very dull. Several of the principal manufacturers of cloaks, suits and waists have considerably reduced their working force, business at present being more or less at a standstill. Complaints of slow collections are general. The retail trade, however, does not appear to be much affected and business is steady. Manufacturers of shirts, gloves and neckwear also report some falling off in orders. Collections in this line continue slow, and indications point to a smaller volume of business for the remainder of the season. Conditions in the wholesale notion business have not improved to any material extent, buying being of

the hand-to-mouth order. Eggs have advanced 2 cents. Butter receipts are moderate, with demand firm. Wholesale grocers say sales are now less than at any time during the present year, while retail grocers report business active but complain of difficulty in collecting their accounts. Manufacturers of confectionery have been and are receiving large orders for the holiday trade. The flour situation is complicated, shipments falling off by reason of difficulty in financing drafts, and the wheat price is now secondary to the question of finance. Some firms have sent currency west to help millers; others send New York checks. Purchases are to fill depleted stocks only. Receipts of live cattle and dressed meats about meet demand. Manufacturers of gas fixtures report an encouraging condition of business, most factories working on full time, with orders sufficient to keep them busy for several months, and collections are almost up to normal. In the manufacture of fancy brass goods there has been a rather sudden stoppage of work, especially on goods used in the holiday trade. In some cases this is due to the cancellation of orders. There is no local buying of copper. Available stocks of pig tin are small and prices have advanced slightly. Pig-iron market continues quiet despite lower prices. There is little or no demand for old material. In the tobacco trade high prices restrict business. In the paint, glue, window glass and kindred trades business is dull all around. But few plans have been filed for new buildings, and the building trade and real estate market are quiet. Some lots offered for sale at auction under foreclosure were bought in at an unusually low price. In the paper trade there is a very fair demand and prices are steady.

The following telegrams show trade conditions at the cities mentioned for the week ending November 22:

BOSTON.—The dry-goods market shows a marked decline in business, especially in cotton goods. There is no buying in that line in the primary or secondary markets, except to meet actual requirements. Jobbers have been receiving, and are to receive, deliveries due under old orders, but, with sales falling off, are anticipating considerable accumulations. Cancellations of orders have in many instances been requested, and when deliveries have been behind have been made. Mills and jobbers are generally insisting on the carrying out of contracts. Jobbing fancy goods trade for the holiday season is active. Retail business in dry goods, fancy goods and wearing apparel is very fair, but sales are made to reduce stocks on hand, and dealers are showing an indisposition to buy goods except when needed. Jobbing trade in clothing and men's furnishings is fair. Leather is quiet and prices are easing in some lines. Hides have reached 6 cents for New England and 8½ for Ohio buffs, and the market appears to have a soft foundation. Shoe manufacturers are anticipating the cancellation of some orders and making practically no goods for future shipments, confining product practically to rush orders. Business in paper is of a very fair volume, but because of money stringency, buyers are cautious and take as a rule only what they need for current or approaching wants. Manufacturers and jobbers are holding prices firm, owing to sustained cost of new materials. The paper stock market shows little animation. Demand is uneven, quite satisfactory for some qualities of paper and rags, and almost at a standstill for others. Business conditions show little improvement in house furnishing lines; trade is below normal for the season and collections continue slow. There is a fair demand for electrical supplies, but payments are poor. In the wholesale coal trade, demand for anthracite is increasing, while bituminous is bringing good prices. Retail trade is seasonable. Lumber market continues quiet in all lines, many of the mills either curtailing or suspending operations owing to the condition of the money market. Copper and metal are quiet. Builders' supplies show little activity. Turpentine is weaker. Wholesale liquor dealers report only medium trade. All grades of seasonable liquors are in demand, and collections are satisfactory. Wholesale leaf tobacco dealers report good trade at medium prices. Collections are fair. Prices have steadied somewhat in the general provision market, but trade continues only moderate. Poultry rules high, and present indications point to high-priced Thanksgiving turkeys.

PROVIDENCE.—A generally quiet condition exists in the jewelry trade. Machinery and tool trades are also quiet, and in structural material there is little activity. The wholesale shoe trade is light, some falling off of sales being reported. Collections are very slow.

PORTLAND, ME.—In some lines there is a disposition to cut orders, and many manufacturers throughout the state are temporarily working on part time. General trade is fairly good, and collections the same.

PHILADELPHIA.—There is little change in the wool market. Desirable wools are scarce, but purchases are few and prices are steady. Manufacturers report a tendency of customers to delay shipment of ordered goods owing to the money stringency, though it is thought the demand for goods a little later will be urgent. Dry-goods jobbers report few cancellations from their customers, and collections, considering conditions, are very fair. Retailers speak of trade as fair. Flour rules steady, but the market is dull. Millers are apparently not pushing sales, but supplies are sufficient for immediate needs. Dealers and brokers in chemicals say that conditions are not improving, those who had bought on contract declining to take deliveries, while orders from others are only for hand-to-mouth requirements. Paints and glass continue in good demand, and except that collections are slow, there is no adverse comment. Lumbermen say prices keep fairly firm, but demand has fallen off considerably. Conservative traders are scrutinizing credits and collecting closely, the disposition being to curtail long time transactions. While leather has been at a standstill, there is a degree of hopefulness notwithstanding the stringent conditions governing the money market, and with easier financial conditions there will be an improved tone generally. Collections have been slow, and these also should show improvement. The demand is now largely for heavy sole leather, so much so that belting manufacturers are said to be using their supply for this purpose in the absence of a brisk demand for belting leather. Prices are steady. Goatskins continue weak. Hides and skins remain quiet. Shoe dealers report a slight falling off in demand, prices steady and full supply. Tobacco orders are smaller and fewer. Cigar factories are fairly busy but not rushed, as they usually are at this season. All along the line the disposition is to await developments. Liquor distillers find few buyers for new goods; the increased price, the difficulty of obtaining cash which must be paid for them, as well as taxes, causes buyers to wait. Wholesalers are asked for little—about enough to keep going—and buying for holiday trade is put off. In iron, extreme dullness prevails. Prices are irregular but fairly well maintained. The manufacturer is apparently not anxious for business at present prices, and the consumer shows no inclination to anticipate his wants, buying in small lots for his immediate needs. The production of pig iron is very much reduced, a number of furnaces being already out of blast, and mills are curtailing their outputs to conform to light orders. The output of anthracite coal this year will probably be the largest in the history of the business. The market readily absorbs it, the demand being a very active one and steam sizes commanding an advanced price. The bituminous trade is quite good, with prices strong, prospects indicating good business throughout the winter. Financial conditions show very slight improvement. The scarcity of currency continues to retard business. It is quoted at 2 to 2¼ per cent. premium, with New York exchange $2.50 to $4 per thousand. Banks are only discounting customers' paper at 6 per cent. Call loans are quoted at the same rate, with a bonus added varying according to circumstances, and made largely through trust companies. Commercial paper has sold moderately through interior banks only, and is quoted 7½ to 8 per cent. for prime names. Bankers anticipate improvement in conditions only through more or less liquidation of general business. Collections are generally slow, and the volume of business for the month shows loss from the previous year.

PITTSBURGH.—Except that there has been a still further curtailment of production, the pig-iron situation is in the same condition as for several weeks past. It is estimated that 50 per cent. of the furnaces in the Pittsburgh district are now out of blast. Suspensions of shipments are numerous, and there is no disposition evinced to either buy or sell under existing circumstances. While there is plenty of iron to be had, the present output is being taken largely for immediate consumption, and there is no large accumulation of stock. Present conditions, it is thought, are likely to prevail until after the turn of the year. The policy assumed by manufacturers of finished products is the same as that of furnace operators, and there is no piling up of stocks. There is a fair amount of current business, but new business is not coming forward and no immediate improvement is expected. Coke, in sympathy with reduced furnace production, is weak, and output is being curtailed correspondingly, and, as with pig iron, there is practically none being bought at present. Steel billets are nominally quoted at $28, but, except for small lots, there are no transactions. Nominal quotations for pig iron at the valley furnaces for immediate delivery are as follows: Standard Bessemer, $20; chilled basic, $19; gray forge, $19, and No. 2 foundry, $19. Coke quotations are nominally as follows: Standard Connellsville furnace coke, $2.50, and foundry coke, $3.25 to $3.50, at the ovens. Dry-goods men report business good, with collections equally so, though some extensions are asked for. Lumbermen report collections fairly good. In groceries, trade and collections are good. Hardware men report demand keeping up, but there is some demand for extensions of time on bills. Many concerns are paying employees in Clearing House checks. The Pittsburgh Stock Exchange has not opened since it closed in October.

BUFFALO.—Retail dealers report trade normal, as do jobbers, but owing to the money stringency the latter expect some cancellations of orders. While numerous workmen have been laid off by different manufacturing houses, others are running on short time. In some lines collections are reported fair, while others state they are slow.

BALTIMORE.—The movement of grain is good, but prices are lower. Stocks in elevators have decreased. Harness and brush manufacturers note a falling off in new business, together with some cancellations. Woodenware dealers report slow collections, with business only fair. Paper at wholesale has moved in moderate volume, buyers purchasing mostly for immediate need. Collections are fair. In drugs out-of-town business is good, with local sales fair and collections very backward. Yellow pine is quiet and lower. Business in hardwood has declined. Demand for canned goods is light, but stocks are not large. Oyster packing at Baltimore shows an increased volume, with good demand and strong prices for raw. Shoe jobbers report satisfactory mail order business, but future business is not up to last year's. Cotton belt collections are unusually slow. In dry goods and notions business at wholesale is quiet, with some cancellations on spring orders. Liquor dealers report increased sales in anticipation of an expected increase in price. Some lumber mills will cease operations on completion of orders now in hand. Coal shippers are busily engaged. Retail clothing trade is moderate, with men's furnishings of fair volume. During November the city negotiated in the aggregate several hundred thousand dollars in small loans at 6 per cent., running four months. Requests for loans continue in excess of the supply, and the general financial situation is well in hand. Some banks have made application for the new bond issue, though a number have practically their full circulation in force, the increase being effected within the past three months; others have an available increase of several hundred thousand dollars to place to their circulation. Collections in general are slow.

CLEVELAND.—The wholesale grocery trade is fairly active. Jobbers in other leading lines report a comparatively quiet condition. Manufacturing operations are along very conservative lines. In many instances either the working force or working time have been reduced in consequence of lack of orders. Collections are slow. Business in iron and steel is dull, and as the close of navigation approaches vessels are being gradually placed in winter quarters. The tone of the financial situation is better and the outlook for an early return of normal conditions is regarded as steadily improving.

CINCINNATI.—While there is undoubtedly an improvement in trade and financial conditions, yet it is not so marked as to again start the factories recently stopped. A more optimistic feeling appears to prevail, but the movement of currency is very limited.

CHICAGO.—Manufacturers and wholesalers, as well as retailers, have reduced their employees and curtailed outputs. Buying in all lines is confined to immediate wants, there being no desire to make new commitments. A decided decrease has come to the trade in all lines the past two weeks, the result of the financial stringency. The scare is affecting the retail trade, which, although not so light as last week, is below the average, and instead of increasing help reductions are being made. Cancellations of orders in all lines of jobbing and wholesale trade are reported, although iron and steel interests have announced their intention of refusing to accept them. Production and sales of iron and steel have decreased, and many hands have been laid off. There is more unemployed help than for four years, and prospects are not bright for the immediate future. Prices are being shaded in many lines of iron and steel, lumber, and in most manufactured articles. Dry goods jobbers report lighter sales. Shoe houses, while having fewer orders for immediate delivery, report advance business up to the average for this season. Coal is not selling as freely, and cars are in better supply. Traffic with eastern and western railroads is the lightest at this time in years, and there is less tonnage in sight than for several years. Butter and eggs have advanced, but poultry and hay declined. Receipts of cattle and sheep decreased and hogs increased. All live stock is lower. Shippers have bought a larger proportion of the hogs arriving than usual. The state banks of Chicago report $102,339,947 in cash resources, an increase of 2.72 per cent. over August 20; loans of $223,814,826, a gain of 11.77 per cent., and deposits of $340,748,492, an increase of 8.15 per cent. Cash resources in proportion to deposit liabilities are 30 03 per cent., compared with 26.85 per cent. August 20. These banks hold $5,551,246 more in cash resources than a year ago, while loans and deposits show a large reduction as compared with last year. Savings deposits are $158,216,992, a decrease of $4,174,907, or 2.58 per cent., from the August report. Banks here have issued $6,000,000 in Clearing House checks for pay-roll and general purposes. Currency is scarce and commands 1 to 2 per cent. premium. The resumption of specie payments depends upon action of New York banks. Little money is being loaned, and it is necessary for banks to extend payment of notes to tide over manufacturers and jobbers. Gold imports by Chicago banks aggregate $16,000,000. Banks are putting out very little money. Grain is being moved out to enable bankers to strengthen their position. Exchange, $1 premium. Collections are slow.

TERRE HAUTE.—Coal operators are encouraged with the prospect for meeting with currency the next pay roll, which will be the largest in years. The car situation is improving. Work in the mines in some districts the past week or so has not been as heavy as in the early fall, but there is still a healthy demand. Shipments of merchandise and supplies, while heretofore materially curtailed, are increasing, being heavier than for several weeks. Merchants feeling more satisfied and relieved have ordered larger bills of goods. Collections are more or less slow, but a slight improvement is noted. For a few days it was feared that factories would be forced to release a number of their men, but the situation is now more encouraging, money being a little easier, and accumulated orders will receive attention.

LOUISVILLE.—Business in manufacturing, wholesale and retail lines is dull. Retail business was fairly good until November 15, when the street railway companies' employees went on strike. They are still out, and cars are being run during the daytime on some of the lines and a few in the early night under the protection of the police. The strike has affected retail trade materially. Money continues scarce, and many of the manufacturers have either entirely closed down or considerably reduced their forces. Nearly all houses report calling their traveling men in, as they were practically doing no business. The Internal Revenue Department of the government has heretofore taken certified checks in payment of taxes for whiskey, but made a ruling, to go into effect November 19, that currency must be paid. This has practically stopped the withdrawal of whiskey from the government warehouses, for the banks will not furnish currency for this purpose, as the government sends its currency to the Treasury, or some sub-Treasury outside of this city. The banks here have done all possible to relieve the situation without help from their correspondents. No cashiers' checks have been issued, and currency is given in any reasonable amounts when needed. Collections are very slow.

ST. LOUIS.—In financial circles conditions seem brighter than at any time since the money stringency set in. While money is easier, the check system is being followed as closely as possible. All the large wholesale dry-goods houses have inaugurated a five-day clearance sale preparatory to taking inventory. These sales have drawn a large number of country merchants from Missouri, Illinois, Arkansas, Kentucky and numerous other

places. While purchases seem of good volume, there is a decided degree of conservatism displayed in buying. Holiday goods are not moving as freely as was expected. Groceries, drugs, paints and oils show some improvement over last week, but sales are somewhat below last year at this period. Millinery jobbers have received a good share of filling-in orders. Manufacturers of ladies' skirts and waists are busy on spring orders. Lumber is exceedingly quiet at lower prices, likewise all grades of building materials. Flour is in good demand, both for domestic and export trade, at firm prices. Collections from nearly every section show a falling off, and several extensions have been granted. However, jobbers seem to think that the worst is over and that business will soon be normal. Retail trade, especially among department stores, is fairly active. New York exchange, $7 premium.

KANSAS CITY.—Jobbers of dry goods, notions and holiday goods report a good volume of business considering financial conditions. Trade in millinery, hats, caps and shoes shows a falling off, due to the calling in of the salesmen in certain sections. This, however, is only temporary. There is a better feeling in trade circles generally, and it is thought that normal conditions will soon arrive. Retail trade shows improvement over last week and collections are better. Money is still scarce, and 8 per cent. is generally asked for such loans as are being made.

MILWAUKEE.—Trade conditions are more promising. The financial situation is clearing under favorable eastern reports and the expected easing of the stringeney from government action, which also has a salutary effect on collections.

SIOUX CITY.—Jobbers still continue to curtail purchases, owing to the shrinkage in business. Some manufacturers are cutting down help and reducing wages. Banks still refuse to make new loans and are increasing their currency on hand. Collections are slow. Some believe the worst is over; others that it will be prolonged. Elevators have opened, but prices are low and grain is not being brought in. Live stock is still weak.

DAVENPORT.—Retail trade is 10 to 50 per cent. less than at this time last year. One prominent grocer says the people are buying groceries now and not trimmings, and every time they see a Clearing House certificate they become more conservative. Most manufacturers are reducing forces. Collections are slow.

ST. PAUL.—Current sales are keeping up quite well and orders for spring goods are largely in excess of last year, but many cancellations are looked for before the time for delivery arrives unless the money situation improves. Collections have fallen off since the 10th instant, but are satisfactory under the circumstances, as jobbers are able to meet their notes from their collections. Buying of wheat has been resumed, but the farmers did not take kindly to cashiers' checks, and buyers offered too much below the market price. Locally there has been considerable laying off of hands in different branches, and a period of depression is looked for. Local banks are well supplied with currency, and if New York and Chicago would only announce a readiness to resume currency shipments they would reciprocate, and would not have to draw on their eastern correspondents.

MINNEAPOLIS.—Grain is moving more freely from farmers. This is deemed to be a very good sign and indicates that those heretofore accustomed to selling products only for money are taking kindly to checks and exchanges. Receipts of grain here are by no means normal, but show marked improvement over two weeks ago. Jobbers report collections not much below the usual amount, and merchandise sales are of satisfactory volume, though mainly for present needs. The entire community seems to have adjusted itself to prevailing conditions with little friction. Manufacturers are mostly running on full time, with a fair volume of orders ahead. Millers are confining sales of flour to sight-draft shipments, hence production is somewhat curtailed.

SIOUX FALLS.—Trade is light and collections slow. Elevator companies are offering to buy grain, paying for the same with checks on leading centers, but farmers as a rule are not inclined to sell, and little is being marketed.

OMAHA.—Mercantile circles regard the financial situation and the outlook more favorably. The banks are more liberal in the payment of cash. No new loans are being made and renewal of paper is confined to short-term loans. Jobbers report a decrease in the cancellation of orders, but report country merchants slow in placing spring business, the inclination being generally to buy only for immediate wants. The live stock business continues quiet. Grain buyers are operating to a limited extent. Collections are slow.

LINCOLN.—Jobbers report an improvement in both trade and collections. Retailers say trade is fully equal to that of last year at this time.

WHEELING.—A restoration of normal conditions both in financial and general mercantile business is going forward. Ready money is still somewhat short, but clearings show an increase over this week last year. Local independent iron and steel plants continue running, but with a decreased volume of orders. Several plants which closed during the past three weeks report repairs about completed and claim they will resume within the next ten days. The payment in gold of employees by a few local concerns has had a stimulating effect, and numerous cancellations of notices of withdrawal from local savings banks are reported. Confidence is expressed in the ability of the window glass operators and employees reaching an amicable adjustment of wage scale shortly, in which event about 10,000 persons will receive immediate employment in the Wheeling district. Collections are still quite slow and unsatisfactory.

RICHMOND.—Wholesale dry-goods and notion ordering is light, as usual at this season. Manufacturers and wholesalers of shoes are receiving satisfactory orders for spring delivery. Dealers in holiday goods and toys continue active. There is less activity shown in groceries, produce, provisions and kindred lines. Retailers and general stores appear to be either curtailing or holding orders. Locally, offerings of tobacco are small, but for such as has been marketed good prices have been received. The scarcity of currency retards marketing of cotton and other crops, much of which are still in the hands of the producer. This has had an unfavorable effect upon retail trade and caused collections to be very slow at this time.

CHARLESTON.—Wholesale trade continues quiet. Several large mills have shut down temporarily owing to scarcity of money. Retail trade is good, due to the fall festival which is now being held. Collections are slow.

AUGUSTA.—Trade, wholesale and retail, is quiet, the latter being greatly affected by bad weather. Collections are not good.

ATLANTA.—Business in all lines is feeling the effects of the money stringency. Manufacturing plants report orders perceptibly reduced. Some plants are laying off help and others are temporarily shutting down. Local collections have improved, but country merchants generally are slow, and numerous extensions are requested.

MACON.—Retail trade is dull on account of warm, wet weather. The financial situation is becoming normal with the aid of bank certificates.

JACKSONVILLE.—Tight money curtails industry. Trade reflects the stringency, and collections are very slow. Buyers confine orders to immediate needs. Large shipments of oranges are made at excellent prices.

BIRMINGHAM.—The iron market is reported only fair; some furnaces have gone out of blast. Other lines report business quiet, though wholesale grocers say the volume of business shows some increase. Lumber is quiet. Collections range from slow to fair. There appears to be a better feeling prevailing generally with the prospective resumption of some industries in the near future.

MONTGOMERY.—Business is extremely quiet in all lines. Collections are very poor.

MOBILE.—Statutory prohibition for Alabama passed the Senate November 19, the law to become effective January 1, 1909. The bill as passed is not in harmony with the views of the mass of people in this county, and is greatly regretted by local business men. Local banks have decided not to issue credit clearance-house certificates at this time, owing to the fact that the situation has eased up somewhat. In fact, so much confidence is felt that depositors now have the privilege of withdrawing currency. Wholesale trade is practically at a standstill, and orders are not being solicited; collections are poor. Retailers, who are now making Christmas displays, report fairly good results. The first killing frost for this section occurred last week. The majority of the cotton crop has been picked. There is little or no top crop.

CHATTANOOGA.—Jobbing trade is fair. Several factories are closing down and others are reducing their forces. There is little, if any, improvement in collections. Building continues active.

MEMPHIS.—Practically all lines are affected by the financial stringency. Wholesale and retail business is less than last year's. Collections are slow. Many sawmills and woodworking plants have closed down. Cotton is moving slowly.

LITTLE ROCK.—Some little improvement is shown in trade over the past few weeks, but collections continue slow. Very little cotton is being marketed.

NEW ORLEANS.—Retail business is good and grocery jobbers find trade satisfactory. Collections are somewhat backward. Jobbers in several other lines are doing practically nothing. An excessive rainfall is interfering with crop gathering.

FORT WORTH.—Heavy rains retard retail trade, but they will benefit wheat. Banks refuse to loan money, and the present system is handicapping jobbers and others.

DALLAS.—Business is very quiet in retail and jobbing lines. Efforts are centered more on bringing in collections than selling goods, but no undue pressure is being put on by creditors. What we need is sufficient money to begin the movement of crops, and if this could be secured the situation here would be rapidly relieved and trade would soon resume normal.

WACO.—Local retail trade continues satisfactory, but jobbing is dead. Manufacturers have laid off many employees and a number of traveling men have been taken off the road. Collections are slow.

SAN FRANCISCO.—The state legislature is in extraordinary session to consider the postponement of delinquent taxes, and to devise means whereby court procedures may continue despite legal holidays, which will continue for some time. No important failures occurred during the past week. A brisk holiday business is predicted. Collections continue difficult.

SEATTLE.—Trade is only fair, and collections have a tendency to be slow. Up to this time Alaskan business has been good.

SPOKANE.—Trade, wholesale and retail, has fallen off materially. Collections are slow. Mines and mills are closing and a general curtailment of business is noted. One million dollars in Clearing House Certificates have been issued and there is talk of an additional issue. Wheat is not moving.

TACOMA.—General conditions continue to show marked improvement. Certificates are being freely used. The banks here are, on the whole, in n strong position and are carrying much more coia than usual.

PORTLAND, ORE.—Trade shows some falling off and commercial institutions are adopting conservative measures. Lumber industry is temporarily affected by advance in freight rates, and many small mills have closed. Collections are slow to fair.

TORONTO.—The stringency is having considerable effect upon industry. The banks are busy strengthening themselves by the calling in of all loans and by refusing to grant others, no matter how sound they may be. So far there has not been much done in the way of actual retrenchment. There is no doubt, say well-informed authorities, that the actual scarcity of ready money is likely to be felt for some months, and it is natural that things should move a little less swiftly while these conditions continue. It must be remembered, however, that while all this is true, it is equally true that the actual conditions of trade and industry throughout the country are sound and healthy. As a whole the farming community is in excellent circumstances, and manufacturers have done a splendid business. They have helped to bring about the present money stringency by additions to buildings and plants, all of which is necessary and entirely legitimate if they are to cope with the growing needs of the country. Money is urgently needed, and it should be got, say these authorities, from outside the country, even at the cost of paying the high rates now ruling in Europe, to tide the country over the present situation. The promised assistance of the government in moving the grain is likely to greatly help matters. General trade continues to move satisfactorily. Wholesale orders for holiday goods are well up to the standard set by former years. Reorders for staple lines are good. Values are generally steady to firm. There is still complaint of textile deliveries. As instancing the feeling of confidence that pervades some branches of trade, it may be noted that wholesale jewelers report business good. The past year has been to them a record one, and even now they are doing an excellent business in holiday lines. The demand for staple and holiday groceries continues good. Farmers have pretty well got through fall plowing, and country trade is brisker. Collections are generally fair to good.

MONTREAL.—The financial situation here continues quite strained on account of the shortage of money. The banks are making determined efforts to get together what money is owing them, and manufacturers are unable to get further credit and are inclined to cut down expenses in order to pay what they already owe. This is being instanced by the way in which some of the larger manufacturing concerns are laying off help. Their output is naturally much reduced. It is a peculiarity of the present situation that all this time there is an excellent demand for most lines of manufactured goods. Heads of plants are quoted as saying they could keep their full quota of labor employed and sell the product, but the fact that they could not get satisfactory terms from the purchasers would make the business unprofitable. The brightest feature of the outlook is found in the announcement that the government will release several millions of money to assist the banks in taking care of the crop movement. This should very materially affect the situation for the better. Another good feature is the way in which collections are coming in from almost all parts of the country. While from some districts they are slow, from others they are quite good. The general demand for wholesale lines, too, keeps quite good. While this is not likely to continue if great numbers of hands are thrown out of work, there is every reason to believe that the holiday trade will equal, if not exceed, that of former years. The greatly increased population of Canada would insure this. Dry-goods men report excellent sorting orders for fall and winter lines. Values generally remain quite firm. The volume of hardware trade is good. It is stated that retailers' stocks are light and that reorders are good. Shipments continue heavy, although navigation is on the point of closing. Declines in raw materials have made little change in general prices. Groceries are moving well and values hold firm. Butter and cheese prices hold firm, and expectations are that if there should be any change it will be in an upward direction. Deliveries of hogs are light, as is the case with almost all other lines of country produce.

VANCOUVER-VICTORIA.—General business is brisk all along the coast, despite the fact that money is tight. The demand for wholesale lines continues brisk and shipments are heavy to all parts of the province. Collections are fair to good. There is continued activity in most lines of industry, although things are very quiet in the lumber trade. It is expected this will result in other branches of activity getting much needed labor, although there are not yet enough men obtainable to do all the work offering. Owing to the fact that at the closing of the harvesting operations in other parts of Canada large numbers of men came on to the coast, and that during the winter many men came down from the Yukon, there are more laborers here than has ever before been the case. The building trade is active, and the shipping trade with the Orient continues to show steady increase.

WINNIPEG.—The scarcity of money and the slowness with which the grain is going forward to market are having some effect upon trade here. Retail business throughout the country is brightening up somewhat, as the farmers are now about through their fall work upon the land. The fact that the government is about to lend the banks some assistance in financing the crop movement is creating an excellent tone. There is still almost a month in which grain may be moved by way of the lakes, and much can be done in this time if the money is forthcoming. Wholesale trade is fairly brisk and sorting orders for seasonable lines are coming in well. The outlook for the holiday trade continues bright. Collections are fair, with those from some districts still slow.

FINANCIAL.

Money Market.

It is recognized that whatever relief the money markets will receive from the action of the government in issuing $50,000,000 of Panama canal bonds and $100,000,000 of one-year 3 per cent. notes will not be immediate. Furthermore, there is some disposition to criticise the latter measure on the ground that it is not likely to draw out hoarded currency, and might, in fact, lock up the funds of the banks, at least temporarily. Sentimentally, however, the steps taken by the Treasury appear to have had a favorable effect, though they have not materially changed conditions in the loan market at New York or other cities, where, as before, the resort to credit instruments in lieu of cash, and the almost complete disorganization of domestic exchanges, are the features. The fact that the premium paid for currency or for gold arriving from Europe, after receding to around 1½ per

cent. early in the week, strengthened and rose to 3 per cent., was naturally adversely commented upon, requirements for pay-roll purposes being more in evidence in this regard than any alleged inclination to secure money for hoarding purposes or for subscribing for the new government notes. Call money, as heretofore, continued to be relatively plentiful, with renewals ranging from 7 to 10 per cent. most of the week. On the other hand, time money is unobtainable, or, at the best, is offered in very small amounts at from 15 to 10 per cent., while commercial paper rules at from 9 to 7 per cent., there being practically no market. Despite the promise of assistance from the Treasury's operation, bankers continue to pay the premium demanded for gold from London, and the total engagements to date now reach the enormous sum of $78,225,000, of which $44,000,000 has arrived, while the feature on Friday was the engagement of $2,000,000 in Paris, this being the first direct engagement at that center.

New York Banks.

At first view last Saturday's New York Clearing House statement appeared to be disappointing in its character. On further examination of the changes in the averages they were generally accepted as reflecting somewhat better conditions than the figures would indicate on their face. In view of the heavy shipments of money to the interior and the offsetting effect of the gold arrivals from Europe, the decrease of $1,135,000 in the cash item, which was furthermore considerably below the estimated actual net loss, was not a bad showing, while the increase of $4,694,000 in loans was so small that it creates an impression that it was made upon decreasing averages in that respect; in other words, that the position in that respect was improving. The increase in deposits of $2,425,000 was not in complete agreement with the changes in loans and cash, but under the circumstances the discrepancy of a little over $1,000,000 is of comparatively little importance. The reserve requirements increased $606,425, resulting in an increased deficit in the surplus reserve of $1,742,325, so that taking the government deposits into account, the deficit was $53,666,950, but omitting the government deposits of $72,362,300 from the reckoning, the deficit is only $35,576,375. The figures of the statement compare as follows with those of the preceding week:

	Nov. 16	Nov. 9	Changes
Loans	$1,192,010,400	$1,187,316,400	I. $4,694,000
Specie	170,347,900	170,712,000	D. 364,100
Legal tenders	48,311,100	49,082,900	D. 771,800
Deposits	*1,089,303,830	1,086,878,100	I. 2,425,700
Circulation	55,844,420	52,856,100	I. 2,988,300
Total reserve	218,659,000	219,794,900	D. 1,135,900
Reserve required	272,325,950	271,719,525	I. 606,425
Surplus reserve	†53,666,950	†51,924,625	D. 1,742,325

The following compares the statements for the respective weeks in 1907, 1906 and 1905:

	Nov. 16, 1907	Nov. 17, 1906	Nov. 18, 1905
Loans	$1,192,010,400	$1,039,307,800	$1,017,083,600
Specie	170,347,900	183,906,400	179,607,300

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending November 21 shows an aggregate of $2,285,957,000, as against $2,368,193,000 last week and $3,495,809,000 in the corresponding week last year. Canadian clearings for the week aggregate $91,848,000, as against $92,962,000 last week and $96,546,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	November 21	Inc.	Dec.	November 14
New York	$1,316,177,000	....	42.3	$1,372,513,000

Foreign Exchange.

Dealings in and quotations for foreign exchange at New York were again attended by a good deal of irregularity. As was noted last week, long bills were for the most part practically unsalable, and the prices for that class of instruments were nominal. The feature continued to be the eager inquiry for cable transfers in connection with gold importing operations, the price of cables at one time rising to 492. The rates for sight sterling varied greatly from day to day. The market, after being very strong on last Saturday, eased off in the early days of the week, there being a gratifying increase in the offerings of commercial bills. Later on, however, the tone again became firmer, with a recovery in the quotations. The Bank of England's discount rate was left unchanged at 7 per cent., though there had been some fear that a further advance would be resorted to by the directors, in view of the continued gold engagements for American account in London and the apparent impossibility of inducing the Bank of France to part with its gold for the benefit of New York. Owing to the maintenance of the premium for cash at New York, international bankers secured about $12,000,000 more gold in London and $2,000,000 in Paris, which brings the total since the movement began up to $78,225,000, of which about $44,000,000 has already arrived. On Friday the market was firm at a further advance.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

@	@	@	@	@	@
4.79	4.79	4.79½	4.79	4.79	4.79.10

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.90¼; commercial bills, 4.78@4.81; francs, 5.23¾@5.18⅛; reichsmarks, 93⅛@94 9-16 less 1-32.

The Bank of England's discount rate was left unchanged at 7 per cent. Its weekly statement, published on Thursday, showed a loss of £1,410,540 in gold, while the proportion of reserve to liabilities is 38.78 per cent., against 40.52 per cent. last week, there being also an increase of £418,000 in loans. In the London open market call money is 4½@5 per cent., and discount 6¾@7 per cent. The Bank of France reported an increase of 4,050,000 francs in its gold, while its note circulation increased 67,575,000 francs, and its discounts decreased 49,825,000 francs. Its rate remains unchanged at 4 per cent., while the Paris market rate is 4⅛ per cent. At Berlin the bank rate remains at 7½ per cent., while the market quotation for discount is 7 per cent.

New York Securities Market.

Aid from the Treasury in the form it has assumed did not altogether change the temper of the stock market. It is true that on last Saturday there was a disposition to discount the anticipated increase of bank note circulation through the expected issue of Panama canal bonds. Moreover, the formal announcement on Monday that this operation would be accompanied by the creation of $100,000,000 short-term notes was temporarily received with favorable demonstrations, both at London and New York. As explained elsewhere, the further effects on the market became rather unsettling, owing in a large degree to the failure of the street and the public to fully understand the character and influence of the note issue, while the fact that the premium on currency continued and that time money was still practically unobtainable, also exercised an adverse influence. The feature of the market, however, was the heavy liquidation in different directions, which made its appearance and which was kept up intermittently during the rest of the week. The general impression was that some large loans were being closed out, and the fact that the disturbance centered in certain prominent stocks, like St. Paul and Rock Island, together with the heavy selling and marked decline in the Rock Island collateral trust 4 per cent. bonds, which issue sold down to below 50, gave rise to many reports and not a little rumor mongering as regards various interests which were supposed to be forced to close out accounts in these securities. Another circumstance which had an adverse effect was the postponement of action upon the Atlantic Coast Line dividend. This resulted in considerable selling of all the southern shares, Atlantic Coast Line, Louisville & Nashville and the Southern Railway stocks selling down to the lowest figures of the movement. The fact that the United States Steel 5 per cent. bonds were again very unsteady attracted considerable attention, this being attributed to the further sale of holdings received in exchange for Tennessee Coal stock. The United States Steel stocks, it might be mentioned, held somewhat better, but naturally eased off with the bonds. Under such circumstances, bearish opinions and reports found free circulation, and there appeared to be a considerable amount of activity on the part of the short interest. Some of the rumors which found their way into the news items were of the kind which are often manufactured for effect at such a juncture. Such, for instance, was the one indicating that the Erie Railroad would pass into the hands of receivers, which, though it was promptly and positively denied by the management, caused the prices for the Erie issues to decline. There were also further adverse comments upon the different announcements concerning the closing down of industrial establishments, either on account of the financial stringency or the falling off of orders. Various industrial stocks exhibited the effect of such conditions, notable recessions having been seen in specialties like American Sugar, Smelting, etc. The bond market was, of course, influenced by the demonstrations above referred to in the prominent members of that department, there being in many cases a total absence of bids for high-grade securities. Government bonds, it may be noted, declined rather sharply on the announcement of the Treasury's plans. On Friday, the market, after exhibiting an early decline, became strong in the late transactions on a decline in the currency premium and the announcement that $2,000,000 gold had been secured in Paris. Covering by the short interest also helped the improvement.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	Nov. 15, 1907	Nov. 8, 1907	Nov. 16, 1906
American	2,737,485	2,565,082	3,039,068
Other kinds	785,876	806,876	761,000
Total	3,523,361	3,371,958	3,800,068

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Nov. 15, 1907	Nov. 8, 1907	Nov. 16, 1906
Great Britain and continent	1,900,000	1,760,000	1,770,000
Egypt	150,000	132,000	165,000
India	297,000	301,000	325,000
United States	1,176,000	1,179,000	1,540,000
Total	3,523,000	3,372,000	3,800,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	Last week	Last year
Week	444,422	442,610	552,216
Season	3,887,962	3,443,540	5,147,138

Cereal Exports by Ports from the United States and Canada.

Boston Shoe and Leather Market.

The leather market is quiet, but prices are practically unchanged. Leather dealers are not attempting to force the market, and, as a matter of fact generally acknowledged, there is no surplus of first-grade stock to be sacrificed. Seconds and job lots are always to be had, and there is probably rather more of the lower grades of leather than the average would show, simply because the demand for it is very limited at any price. Dealers have offered to give way on rough leather, but little is being used at present. Cut soles are not selling up to last month. Patent leather is only moderately active. Hides are not holding their own. Ohio buffs have sold at 8¼ cents, and New England hides at 6@6½ cents. Southern hides are not taken on offers of 7 to 7¼ cents. Shoe manufacturers, as a rule, are proceeding very cautiously. They are working on orders for immediate shipment and buying material to cover such orders only. A few are rushing on stock orders for January shipment so as to get the goods made up and shipped before orders are canceled, but this policy is looked upon by the majority as unsafe, and the product is being kept down to half of normal business for this time of year. Jobbers are buying only such goods as they can use and pay for immediately. Shipments of footwear are reflecting prevailing conditions. The figures of the *Shoe and Leather Reporter* this week are as follows: Last week, 85,503 cases; preceding week, 83,298; last year, 98,463; total for 1907, 4,304,504; total for 1906, 4,576,240; decrease, 271,736.

Wool Markets.

A more optimistic feeling prevails in wool trade circles, and while there has been little increase in the volume of transactions, there is less disposition among weak holders to sacrifice their wool, and prices are being well maintained on the basis established a week ago. Manufacturers are buying only for current requirements, in small lots at current rates, dealers meeting their views on the price scale of a slightly lower level, from which there has been no further recession during the past week. On good wools, particularly, there has been little shading of prices, as worsted wools are in very light supply and most grades of staple wools are scarce. The money situation is improving daily, and while still preventing all buping of a speculative nature, admits of more available currency and a noticeable improvement in collections. Thus far the weakness in foreign markets has had little effect in Boston except to limit sales. While the domestic wools have lost the support of foreign firmness, they have at the same time been placed above fear of competition by the cessation of buying abroad and the certainty that manufacturers will be forced to rely to a greater extent upon the domestic clip for future supplies. Owing to the scarcity of staple wools, the main part of the trades of the past week were in clothing grades, which have moved in small lots, territories being more active than others, owing to the larger stock on hand. A few worsted wools have sold in the original bags and some staple has changed hands, but the total of such business has been very small. New fall Texas wools are arriving on consignment, and sold last week at 18@19 cents for average and 21@22 cents for best, though financial conditions prevented Boston interest in the sales at San Angelo. Fall California wool, baled and scoured, is coming in slowly, and sold moderately at 45 cents for average and up to 52 cents for the best. Australian markets are reported easier, wools suitable for this country being irregular, with little buying. There are large offerings of faulty wools at Melbourne, with prices ½@1 penny lower. The next London sales will open November 26, with a better selection than usual, and opinions differ as to the probable course of prices.

PAPER FROM PEAT.

The peat bog furnishes the latest substitute for wood in the manufacture of paper. Paper making from peat on a commercial scale has already begun in Sweden, where a company, capitalized at more than $1,000,000, has made extensive purchases of peat bogs and prepared plans for the erection of mills for turning out wrapping paper and pasteboard. The money for the enterprise comes largely from London, but the process by which the vegetable fiber of the peat will be converted into paper is covered by an American patent. An account of the successful launching of the enterprise is given in a report of United States Consul R. S. S. Bergh, of Gothenburg, Sweden.

It is claimed that a ton of paper worth $30 can be made from peat at a total cost of $15, thus leaving a satisfactory margin of profit. It is further claimed that it takes only two hours to convert the peat into paper. It should not, however, be expected that peat as a material for paper making can take the place of wood pulp for all purposes. If it helps to meet the demand for the coarser grades of paper and thus relieves the pressure upon the timber supply it will do a great deal for the forests of the United States.

The quantity of peat in the world is enormous. It exists in all the countries of northern Europe and has been used as fuel for centuries. Deposits from ten to fifty feet deep and many miles in extent are not unusual. Siberia has thousands of square miles of peat, and much exists in the United States and Canada. It is a vegetable substance, deposited by slow accumulations during thousands of years, the process being similar to that by which coal was formed.

Many good qualities have been claimed for paper made from peat. It is said that an article wrapped in it will not be attacked by moths, and for that reason it is assured to be peculiarly fitted for boxes and bags for storing furs and woolen clothing. It is further claimed that a process of bleaching will give the paper a snow white color, and thus make it equal to the best pulp papers for printing purposes, but this claim does not appear to have been established by actual tests on a commercial scale. Wrapping papers, cardboards and paper boxes made from peat possess greater strength than similar articles made from straw.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, NOVEMBER 30, 1907.

It is probable that the proceedings of the Sixtieth Congress, which begins its first session on Monday, will reflect as far as its appropriations are concerned the conditions which have been prevalent for some time in the financial world. Advices from the national capital, where the legislators have begun to gather, indicate that they are impressed with the importance of observing economy in the matter of expenditures. It is felt that in the present condition of public feeling, any tendency to incur expense beyond the actual needs of the government would be in a high degree unpopular. To some extent this feeling will operate as a check on the volume of legislation generally, for many of the measures that in the nature of things will come before the two houses will involve appropriations. Another factor that is likely to operate as a check on the production of legislation is the occurrence of the presidential election next year. It is not usual for the dominant party to encourage the enactment of legislation on any very extensive scale at the session immediately preceding a presidential election. The outlook, therefore, would seem to be for a not very active session, except perhaps along lines such as those touching currency reform, where there seems to be an insistent demand for something to be done, or in directions where the vigorous initiative of the Executive may spur Congress to action.

Probably never before in the history of the country have its waterways received the amount of attention they are getting at the present time. It is less than two weeks ago that the Deeper Waterways Conference was held at Philadelphia to discuss plans for the development of canals and rivers along the Atlantic seaboard. This week the Inland Waterways Commission has been in session at Washington considering comprehensive projects for the development of the country's water highways in connection with the conservation of the country's resources generally. Next week will witness the holding at Washington of the National Rivers and Harbors Congress, whose purpose is announced to be the advocacy of a broad national policy with respect to waterways and harbor improvements without committal to any special project. The reports from the Panama canal, it may be noted, tell of more rapid work than ever before done in the history of that great undertaking. With so much information and discussion upon all phases of waterway improvement, some noteworthy developments may be looked for in that direction.

Haste is being made slowly with the work of the Central American Peace Conference. The first committee appointed to formulate a basis for discussion in the shape of a tentative peace agreement, failed to agree, and another one was appointed, which presented a draft of a general treaty. It is understood that one feature of this treaty is a provision for the establishment of a high court of arbitration to settle disputes between the states concerned without a resort to war. Among the suggestions before the conference is one providing for the negotiation of three separate conventions, dealing respectively with arbitration, commercial relations and extradition, instead of one general treaty. Still another proposition contemplates the joining of the five Central American states into a union. This, which is apparently regarded as a rather radical step, is being discussed in an unofficial and informal way, and it seems unlikely that any definite action can be taken upon it at the present conference.

In round numbers, the manufactures annually produced in the United States have reached a total value of $15,000,000,000, according to a statement made in his annual report by Colonel John M. Carson, the Chief of the Bureau of Manufactures. These figures do not represent finished products alone, but include those in various stages of progress. This total is more than double the value of the agricultural products of the country, which are estimated by the Secretary of Agriculture at $7,412,000,000, and that represented a very considerable increase over the total for the preceding year. In the list of exports for the fiscal year which ended on June 30 last, manufactures led all the rest in value with a total of $1,086,000,000, or over 58 per cent. of the entire exports for the year. There seems to be some overlapping of classifications, for the Secretary of Agriculture reports exports of farm products amounting to $1,055,000,000, and the two totals exceed the aggregate value of all exports. There was an increase of nearly $20,000,000 in exports of completed manufactures, a fact to which special significance is attached by the bureau in view of the decline of more than $21,000,000 in the exports of cotton cloths, a loss due to the falling off in takings from China. It appears that the cottonseed product industry now represents an invested capital of $100,000,000, and that the exports of products of the industry were valued at over $40,500,000, an increase of $9,500,000 as compared with the preceding fiscal year. The bureau has been in correspondence with representatives of transportation companies with a view of securing more reliable and rapid transit for merchandise destined to foreign countries, so as to obviate complaints of the uncertainty of deliveries made by merchants in the Orient.

When Secretary Cortelyou spoke before the Merchants' Association at New York a couple of weeks ago, he urged that hoarded money be put back into the banks and that the exactions of bankers and merchants should be proportioned only to actual business necessities. In consonance with this view, the board of directors of the association has adopted resolutions suggesting that the holding by some banks of reserves greatly in excess of the normal ratio tends to intensify conditions which it should be the general aim to alleviate; that while provision of the settlement of local debts, as by means of checks payable "through Clearing House only," are helpful, provision for the payment of non-local indebtedness is essential, and that the business of large manufacturing and mercantile concerns, being chiefly non-local, cannot go on if local funds are everywhere tied up. The concluding suggestion of the association, that all citizens solicitous for the general welfare should do their best to accelerate the return to normal conditions by assisting in bringing all the money now lying idle into active circulation, is, it needs scarcely be urged here, a counsel of prudence as well as of courage.

It may be recalled that when the French cabinet toward the end of last month agreed with the tariff commissions of the Senate and Chamber of Deputies not to conclude any further commercial treaties until the bill drafted by them should have been acted upon, it made the proviso that the recently negotiated treaty with Canada should be ratified. From information given out at Paris on Thursday, it appears that this treaty when ratified will replace the treaty of 1893, and will be operative for ten years, though either party will have the right to withdraw before the expiration of that time by giving one year's notice. Under the treaty Canada secures the benefit of a minimum tariff on horses, cattle, poultry, salted meats, canned goods, eggs, cheese, butter, fresh and salted fish, wheat, oats, barley, rye, maize, potatoes, fruit, lumber, vegetables, fodder, coal and metals. France, on the other hand, obtains the advantage of an intermediate tariff on meats, poultry and game, cheese, fruit trees, perfumery, medicinal wines, soap, pomade, glass, laces, cotton and linen thread, dress goods, woolens, automobiles and locomotives. The most-favored-nation administrative treatment is secured to both countries in connection with all commerce between them.

A short time ago it became evident that, owing to the condition of the money market, the original plan for the settlement of the Dominican debt by the sale of bonds to a New York firm could not be carried out. This fact was brought to the notice of the Dominican government by Secretary Root, who advised the representatives of the republic to await more favorable conditions. Negotiations have since been in progress, however, as the result of which, it is thought, a feasible plan may be agreed upon. It is suggested that the foreign creditors of the Dominican republic who were recognized in the original project and are willing to agree to the other features of the new plan will receive an immediate payment of part of the money owing to them by a division on a pro rata basis of the fund of $3,500,000, which has accumulated as the result of the segregation of 55 per cent. of the republic's customs revenues for the last two years. It is proposed that in consideration of this payment the sale of the bonds of the republic to some syndicate which will advance the cash to settle the remainder of the debt will be postponed until a more opportune time.

While details of the reciprocity agreement recently negotiated between the United States and Great Britain have not yet reached the State Department, the substance of the matter seems to be sufficiently well understood there. It appears to be the case in general terms that Great Britain agrees to admit free commercial travelers' samples, and that in return works of art originating in the United Kingdom will be allowed entry at reduced rates of duty. The concession thus made is understood to be similar to that made to Belgium about a year ago, under which the deposit of the amount of the duty, or of a bond for the same, is required as a preliminary to the free admission of the samples, but the duty or bond is to be withdrawn at the pleasure of the traveler upon leaving the country.

A CURRENT OF REACTION.

Just at this time the careful observer must be impressed by the fact that there are two opposing currents of political thought making themselves visible in the stream of public affairs. The discovery of one of these has, indeed, not required any great degree of discernment. For some time now the trend of events has made for the vigorous employment of the powers of government generally, and in a particular way for the increase of the domain of activity of the central government. This has been in part the result of conditions bound in any event to make themselves potent in shaping results. The development of the means of communication and of transportation, the growing sense of national consciousness, the extension of the country's control over and employment of the material resources within its territory, the need of concerted or general action on matters having an interest wider than state lines, all have helped powerfully to strengthen the conceptions making for increased governmental action. The operation of these factors has, however, been quickened and accentuated by the influence of vigorous and active personalities, so that for a time the current seemed to set all one way.

Now, however, there are some indications of a reaction. The material development of the country has gone on, and the agencies making for a drift of governmental power and activity to the center have not spent their force, but of late, here and there, individual voices have been lifted to ask whether the influences helping to an augmentation of governmental activity need to be accelerated—whether, indeed, the need is not rather in the other direction. Some expressions of this kind, we notice, were elicited at a discussion on the relation of the Federal Constitution to present day conditions and needs before the Economic Club at Boston on Saturday evening last. Mr. Edward B. Whitney, formerly an assistant attorney-general of the United States, declared that for a long time past the judiciary has been exercising functions which are legislative in their nature, and that this has resulted from the invasion of the statute books by legislation of a kind which formerly would have been called undue meddling, and much of which would have been universally considered socialistic. Dr. Henry Wade Rogers, the dean of the Yale University Law School, said that we are threatened with a revival of federalism, and "a federalism more extreme and radical than the leaders of the old Federal party ever countenanced or would have tolerated." It was argued, he said, that great evils have grown up which the states have not remedied and from which we would have been free if only the federal government had exercised authority, and not the states. Conceding that the states had not done their full duty, Dr. Rogers said that the statement that the federal government would have done better was a mere assumption which he was not prepared to accept. Of a similar tendency is the remark, recently made by President Woodrow Wilson, that increased government control would afford no solution of predatory conditions in corporate affairs, but would merely mean taking the power away from the people and putting it in the hands of political discontent.

These expressions, it will be observed, are from men who are not closely in touch with governmental administration to-day, though Mr. Whitney has acted for the government, and Dr. Wilson has made a noteworthy study of it at close range. One need not, however, look in vain for similar declarations by men who have their finger on the pulse of the machine to-day. Mr. Ridgely, the Comptroller of the Currency, for example, said, in an address in Springfield, Ill., on the same night the Boston club held its meeting, that the government interferes too much with the business of the country. On the same evening, also, a letter was read at the banquet of the National Business League at Chicago from Mr. Root, in which the distinguished Secretary said that while the State Department was actively engaged in many ways and many directions in striving to pry open and hold open the doors for the entrance of American commerce, and to make its progress and extension easy, he did not believe in too much government. The limitations upon what government effort can do and ought to do were, he said, very clear, and he added that the really great things in this country have been accomplished in the true American fashion by the association of individual private enterprise. These words coming from a statesman who is so close to the President, and who has been thought to favor centralizing tendencies in government, have an interest of their own. Taken together, the outgivings noted above, coming form divers sources, constitute an interesting collection of opinions, indicating very clearly that the current of political thought is not all in one direction, but that we may be witnessing an ebb in the tide that until very lately has seemed to run but one way.

THE HARVEST YEAR.

As the representative in the Cabinet of the country's basic industry—agriculture—Secretary Wilson, in the eleventh annual report of that department, gives a glowing account of the year's harvests, this, too, in spite of the fact that the last winter was a hard one, and that the spring was first very warm and later very cold, making all crops late and cutting the yields quite materially, as compared with 1906. The farmer so far has had good prices for his crops, and particular stress is laid upon this feature by Secretary Wilson, who writes so entertainingly of the profits of the farmer, due to higher prices, that one almost loses sight of the fact that the very high price of all food products this year has been a source of complaint to consumers outside of the agricultural sections. As to the matter of the increased cost of living to the rest of the community, involved in the higher prices due to shorter yields, there may be economists who will differ with the Secretary as to the beneficial features to the country as a whole contained therein; but in view of the happenings of a few weeks ago in financial lines and the recession in trade noted since, it is in a high degree encouraging to know that the farmers of the country, according to their able spokesman, never made more out of their crops than they did this year. As already pointed out in these columns, this matter of prosperity of the farmers must have an important effect upon the outlook for future trade in other lines, and if past experience is a guide, the country has a backlog of prosperity, in the shape of prosperous agriculture, which will probably go far to mitigate the severity of the present reaction. Following is a summary in table form of the yields and values of most of the leading crops as given in the Secretary's report, with comparisons of actual yields and values for 1906 (three figures being omitted from each column):

	Bushels, 1907	*Value,* 1907	*Bushels,* 1906	*Value,* 1906
Corn	2,553,732	$1,350,000	2,927,416	$1,166,626
Wheat	625,576	500,000	735,260	490,332
Oats	741,521	360,000	964,904	306,292
Barley	147,102	115,000	178,916	74,235
Rye	31,566	23,000	33,374	19,671
Buckwheat	13,911	10,000	14,641	8,727
Rice	21,412	19,500	17,854	16,121
Total above	4,134,910	2,377,500	4,872,365	2,082,004
Potatoes	292,427	190,000	328,038	157,547
Flaxseed	25,420	26,000	25,576	25,899
Hay, tons	61,420	660,000	57,145	592,539
Tobacco, pounds	645,213	67,000	682,428	68,232
Hops, pounds	48,330	5,000	56,000	7,000
Total value	....	3,325,500	....	2,933,221

The figures of yields are not materially different from earlier estimates which have appeared in these columns, all pointing to quite general decreases in outturn from 1906. Thus the wheat yield fell off 15 per cent., corn 12.7 per cent., oats 23 per cent., barley 17.4 per cent., and rye and buckwheat about 5 per cent. each. The outturn of the seven leading cereals (rice included) is 15 per cent. below 1906; the potato crop is 5.2 per cent. smaller, while the tobacco crop is 5.4 per cent. less than in 1906. It is encouraging, in view of its great value, to learn that the hay crop is 6 per cent. larger than in 1906, that the rice crop is 20.2 per cent. larger, and that the sugar yield is better than a year ago.

When we turn to the matter of values of these crops, however, we find that the Secretary sees only two crops that are likely to turn out less profitably to the farmer than in 1906. These are tobacco and hops, and against this we find an estimate of aggregate value of the seven leading cereals 14 per cent. larger than in 1906, with gains also in the values of the potato, flaxseed and hay crops.

As to other agricultural values, the Secretary places the value of the cotton crop at between $650,000,000 and $675,000,000; he estimates the dairy products of the farms as worth $800,000,000, and thinks poultry and eggs are worth $600,000,000. He also figures that the animals sold from farms or slaughtered in 1907 will aggregate $1,270,000,000, and finally estimates the value of all farm products at $7,412,000,000, a sum 10 per cent. greater than in 1906. As to the beneficial effect upon the country's foreign trade of this large production, it is pointed out that the exports of farm products for the year ending June 30, 1907, were worth $1,055,000,000, a sum $79,000,000 in excess of the high record of the previous year. It is also brought out that for the first time in the history of the world a country (this one) exported agricultural products to a value greater than $1,000,000,000.

Naturally the Secretary is bound to point out that his department has been instrumental in bringing about some of these very good results. Thus he instances the fact that the Department of Agriculture, in 1897 to 1902, made experiments that laid the foundation of the durum wheat industry, which has given a crop worth $30,000,000 to this country at a total cost in the beginning of only $10,000. He also shows that the department has so encouraged beet-sugar culture that 500,000 tons were produced in 1907, valued at $45,000,000, and brings out the fact that the value of the alfalfa crop, another protégé of the department, will this year aggregate $100,000,000.

With the Secretary's report in detail it is not within our space to deal. That the farmer this year and, through the farmer's efforts, the country, have a good deal to be thankful for, is the Secretary's firm idea, and in closing his report on farm yields proper he indulges in the following bit of word painting: "The miner cannot restore the mineral to the mine. With the farmer it is different. The primal forces and atoms of the universe are his. The sun shines and the rain falls, and the farmer applies his art and science to inexhaustible resources, ever adding enormously to the country's wealth, capital, credit and welfare."

RAILWAY VALUATION.

One of the features of the anti-railroad agitation, which has been so rife in various sections of the country, is the demand for a valuation of the roads with a view to determining the extent to which they are overcapitalized. This fact once demonstrated, say the advocates of valuation, a basis will be established for fixing rates on a lower and more reasonable level. The contention of railroad authorities that rates are regulated by competition, either in the charges themselves or in the facilities which different companies offer to shippers and travelers, seems to make no impression upon these people, who assume that the railways have inordinately watered their capital, and that a physical valuation of their plants is the panacea for whatever evils, real or supposed, are inherent in the transportation situation in this country.

The question whether the roads are overcapitalized as a matter of fact is now receiving a good deal of attention and has been made the object of special examination by several authorities. Among the recent contributions to the literature of the subject is a pamphlet by Mr. Slason Thompson, which has attracted not a little attention in railroad circles. His investigations are predicated upon the view widely held by railroad officials, economists and public authorities conversant with the matter, that the true criteria of the value of the roads and the reasonableness of their capitalization are their original cost and the estimated cost of reproducing them. To this end he has made researches of an extensive kind in regard to cost of various roads, showing that in some cases the older railways of the United States, such as the Baltimore & Ohio, or the lines which afterwards became portions of the existing Pennsylvania, New York Central or New Haven systems, cost prior to 1840 from $40,000 to upward of $50,000 per mile to build as single-track roads. The conclusion at which this writer arrives from the data before him is that the total cost of American railroads up to 1906 had been $13,187,232,778, or $1,328,059,351 in excess of the net capitalization in stocks and bonds in 1906, as shown by the statistical report of the Interstate Commerce Commission for that year. This difference, it is assumed, represents improvements and extensions paid for out of earnings.

On the subject of reproducing the existing railways the pamphlet presents an

interesting estimate, which is given in the following form:

Cost of 214,475 miles single track at $35,000 per mile		$7,506,625,000
Cost of 94,743 miles auxiliary track at $10,000 per mile		947,430,000
Equipment—		
Locomotives, 51,672, at $12,000	$620,064,000	
Passenger cars, 42,262, at $6,000	253,572,000	
Freight cars, 1,837,914, at $1,000	1,837,914,000	
Work cars, 78,736, at $600	47,241,600	
Total cost of equipment approximately		2,760,000,000
Block signals, 50,000 miles		60,000,000
Cost of right of way, present location and terminals		3,000,000,000
Real estate, shops, tools and materials		500,000,000
Total		14,773,055,000

According to this the reproduction of the roads would require $1,585,000,000 more than their estimated cost and $3,101,114,385 more than their net capitalization. It may also be remarked that competent authorities incline to the opinion that Mr. Thompson's estimate as to the cost of right of way and terminals, especially those in the larger cities of the country, is too low, and that in many cases, if it were a serious or practical matter, it would be an impossibility to secure the land for terminals, etc., at any price. This investigation by a competent statistical authority is of the highest value, and should act as a corrective to some of the exceedingly rash assertions which have been made by various advocates of the valuation plan, notably Senator La Follette, who has been quoted as claiming that there were $7,000,000,000 of water in the capitalization of the railroads. It is, of course, to be considered that an exact valuation of the country's railroads would be an impossible task, but estimates like the above, based upon specific data, are of the highest value. That capitalization is not the governing factor in connection with rates is, moreover, shown by the fact that although the average net capital of the country's roads rose from $49,948 per mile in 1890 to $54,421 per mile in 1906, the average rate per ton per mile for freight had decreased in that period from .941 cent to .748 cent. It is certainly a remarkable fact that with the increased capitalization per mile, which in a large part represents improvements and better and more abundant equipment, rates should have declined on the average to such an extent.

MONETARY SITUATION IMPROVING.

Developments during the past week, as will be seen from the ensuing summary of the principal events from day to day, have been somewhat varied, but, nevertheless, leave on the whole the impression that the idea which was current last Saturday about the probability of further improvement in the monetary situation was well founded. The most important feature has been the lowering of the premium for currency at New York, while not a little stress is also laid in financial circles upon the fact that the Secretary of the Treasury has made announcement to the effect that there will in all probability be only a small emission of the 3 per cent. one-year Treasury notes. In view of the fact that so much criticism has been forthcoming in regard to the policy of the administration in authorizing $100,000,000 of these securities, both bankers and politicians of financial experience having registered earnest protests against the measure, it is gratifying to have it known that the plan will be restricted in its scope, and an unnecessary inflation of the currency avoided. In the meantime gold engagements have continued to be made in London, and the total amount taken by American interests from European markets now reaches the imposing total of $94,750,000, of which $55,000,000 has already arrived. It may be noted that leading New York bankers have not hesitated to state their opinion within the past few days that a fortnight at the most will end the restricted use of cash in the daily exchanges at the larger cities, it being understood that concerted action is being sought among the Clearing Houses of New York, Chicago and other cities to this most desirable end. The stock market has also reflected these improving circumstances, and despite some decided irregularity, in which what are termed the Gould stocks figured very unfavorably, there has been a general improvement in the stock quotations.

On the other hand, there have been several adverse features which deserve attention, even if they do not outweigh the effect of the good ones. About $2,000,000 of gold was obtained in Paris by American bankers at the end of last week. A report, however, that the Bank of France had relaxed its rules and would permit its stock of American gold coin, amounting to about $60,000,000, to be gradually drawn on for the benefit of the money markets of this country proved to be unfounded. According to the best accounts the authorities of the Bank of France will not depart from their precedents, and insist upon having as security for any advances of gold commercial bills of exchange drawn on London or other centers of Europe, maturing in three months, which would, of course, be tantamount to lending the gold for that length of time, with an ability to call it in if desirable.

November 23.—Stock market strong on short covering. Bank statement shows decreases in loans, $4,012,000; deposits, $9,485,000, and cash, $2,807,900. Deficit in reserve, $54,103,600, an increase of $436,650. Call money 10 per cent.; time, small lots, 12@15 per cent. Chicago reports first demand for commercial paper, and return of some money from interior. Empire City Savings Bank (New York) resumes paying all depositors on demand. Announced that construction work on Union Pacific lines will be resumed December 1. Russia pays $24,302,200 balance of war debt to Japan. Baldwin Locomotive Works deny laying off men or receiving cancellations. Chicago reports 10,000 men on St. Paul extension have wages reduced. New Haven road announces terms of issue of $39,029,600 6 per cent. debentures. Record arrival of gold—$12,500,000 on steamship Mauretania. Congressman Fowler condemns $150,000,000 note and bond issues.

November 25.—Stock market weak on liquidation. New low prices for many stocks. Foreign markets rather better. Price of bar gold reduced in London, and discounts easier. Large shipments of currency from New York to the interior. Money on call, 3@10 per cent.; prevailing rate, 10 per cent. Time, nominally 12@15 per cent. Currency premium, 1½@2 per cent. Sterling exchange ½@1 cent lower. Announced that number of stockholders on Pennsylvania Railroad's books on November 1 was 52,622, an increase of 3,050, or 6 per cent., from October 1. Practically all of Tennessee Coal & Iron Company common stock deposited in exchange for United States Steel 5s. New York Central Railroad creates a $30,000,000 equipment trust. New York banks subscribe for $20,000,000 of new 3s and pay in $10,000,000. Sub-Treasury transfers $5,181,000 to interior. Gold engagements, $5,000,000. United States Exchange Bank (New York) resumes business. Announcement that Bank of France will send New York $4,000,000 gold weekly, till $60,000,000 is sent, denied. Governor Comer (Alabama) signs railroad rate bills. Reports from country that some industrial concerns are resuming or running on longer time schedules. New York City carpenters reject cut of 50 cents per day in wages. Prices of hog products reduced.

November 26.—Stock market strong after early weakness, on reports that banks will shortly resume cash payments, better foreign markets, less active demand for currency at interior and easier money; gains on day of 1@3 points. Call rates, 3@8; prevailing rate, 7 per cent. Time, nominal. Currency market active early at 1¾ per cent., later closing weak at 1 per cent. London discounts drop 1 per cent. below bank rate. Gold engagements, $1,250,000. Grain markets buoyant. Cotton firm. Western reports are that banks will resume cash payments in two weeks. Some central western steel works resume. Western railway traffic falling off. United States Steel Corporation reported buying its own 5 per cent. bonds. Russian 5 per cent. bonds sell at record high prices. New York State Knit Goods Association decides to decline to receive cancellations. Immense number of emigrants leaving for Europe.

November 27.—Stock market generally strong, with advances of 1@3 points on improved tone of domestic markets and higher prices abroad. Foreign markets stronger. London firmer but quiet. Paris firmer. Berlin higher. Call money, 3@6 per cent.; prevailing rate, 6 per cent. Time a little freer, with some business, sixty to ninety days, at 12 per cent. Mercantile discounts better, at 8@10 per cent. Gold engagements, $1,000,000. Currency premium drops below 1 per cent., for first time since October 26. Foreign exchange easier. Wheat and corn slightly higher; cotton also. Treasury makes heavy deposits with banks subscribing for bonds and notes. More cheerful reports from Pittsburgh steel mills. Alabama cotton goods manufacturers agree to restrict production. Curb stock market slightly firmer. Wholesale meat prices lower at the west. Live hogs are $2.50 per 100 pounds lower than November 1, and lowest price since 1900. Great Northern Paper Company's dividend deferred. United States Court at Montgomery restrains operations of new Alabama railroad laws. Secretary Cortelyou closes subscriptions to new 3 per cent. notes.

November 28.—Holiday here. Good Bank of England statement. Reserve increased £1,870,000, or from 38.78 per cent. of liabilities last week to 42.83 per cent. this week.

November 29.—Stock market after early weakness, due to a break in the Gould stocks, rises violently. Activity in bonds at advances. Decline in currency premium and expectations of good bank statement Saturday moving features. New York City 4½s sell up to 107. New Haven road announces it will not reduce wages. Stock exchanges at outside cities active at higher prices. Call money, 6@14; prevailing rate, 6 per cent. Time money a little freer at 10@14 for sixty days. Money premium, ½ to ¾ cent. Delaware, Lackawanna & Western Railroad declares usual 10 per cent. extra dividend, making 20 per cent. for year. Gold engaged $500,000. Total to date, $94,750,000, of which $59,886,000 received. Cotton advances sharply. Wheat and corn lower. New bank circulation taken out since November 1, $42,000,000. Canadian Pacific announces $28,320,000 new stock to be issued. Treasury note allotments reduced; bank subscriptions only considered. Amount estimated at $35,000,000. The copper and gold mining companies cut dividends.

STATISTICS OF THE FEDERAL SERVICE.

An interesting illustration of the growth of the government service in the United States is furnished by the sending to press of the first volume of the Blue Book or official register of the United States for the year 1907, which will be delivered to each senator and representative at the opening of Congress. The earliest issue of the official register was made in 1816, and was prepared under the supervision of the Secretary of State, who continued to publish it biennially until 1861, when the duty was transferred to the Department of the Interior. In 1816 one volume was published containing 176 pages, and names approximating 6,327. No indication of the cost of the publication appeared until the year 1863, when it is given as amounting to $3,681.02. At that time the volume had reached a total of 824 pages, containing the names of 49,212 persons. Between the years 1863 and 1871 the pages in the register increased to 913 and the total names to 53,917, while the cost of getting out the volume considerably more than doubled, amounting to $8,115.98 in 1871.

In a single decade, that running from 1871 to 1881, a remarkable change occurred. The pages necessary in the latter year numbered almost double those found necessary in 1871, the number of names included was more than double, and the cost of getting out the two volumes found to be needed was almost three times as great. As time went on the service expanded, though not again at the rate reached in the decade just mentioned. In 1891 the names were increased to 166,375 and the pages in the two volumes to 2,604, while the cost rose to $33,027.71. The succeeding decade saw the names mount to the number of 256,081, and the number of pages to 3,401, while the cost of bringing out the work rose to $52,894.30. The last year covered by the register is 1905, when 4,219 pages were required to record 349,075 names, at an expense of $70,808.66. It may be noted that in 1906 Congress transferred the preparation of the register to the Director of the Census, under whose direction the present issue is being published.

An economy has been brought about in the present issue by the presentation of the names in alphabetical order instead of classifying them by departments, bureaus and independent offices, as in former years. In the last preceding issue, it may be said, the index alone occupied 869 pages. In all there are 306,141 names presented in the issue for 1907, 125,805 in the first volume devoted to the federal service generally outside of the postal service, and 180,336 in the second volume, which comprises the postal and railway mail services. The aggregate number of pages required in the two volumes for the present year is 1,560, or 2,659 less than the number printed in the 1905 issue, and about 3,000 less than would have been required for this year's issue if it had been prepared on the former basis. An interesting analysis of the class of federal employees, comprising officials and clerks and professional, technical and scientific persons in the service of the government, is presented in the following table, which indicates the number and the percentage of each class:

Grade	*Number*	*P. ct.*
Officials, clerks, etc., receiving $2,000 and over	1,711	6.8
Clerks receiving		
$1,400 to $2,000	3,520	13.9
$1,000 to $1,400	4,295	17.0
Under $1,000	1,928	7.6
Professional, technical and scientific—		
$1,400 to $2,000	714	2.8
Under $1,400	784	3.1
All other	12,357	48.8
Total	25,309	100.0

This table gives the general impression that the salaries paid in the national service in the superior grades are the reverse of

high. It has not been found practicable to analyze the class of sub-clerical, mechanical and miscellaneous employees owing to the great diversity of minor callings in the service.

HAWAIIAN TRADE, CROPS AND LUMBER.

Hilo, Hawaii, October 30.—Trade statistics of the territory with the mainland of the United States show a steady growth in the matter of imports during the last five years. The value of the exports naturally fluctuates with the price of sugar, which is the principal crop product, as the following figures show:

Year ending June 30	*Imports from U. S.*	*Exports to U. S.*	*Total*
1903	$10,943,061	$26,275,438	$37,218,499
1904	11,683,393	25,204,875	36,888,268
1905	11,753,180	36,171,576	47,924,756
1906	12,036,675	26,938,512	38,675,187
1907	14,225,000	29,364,000	43,589,000

Exports to foreign countries amounted to only $183,981 for the year. Imports from foreign countries, on the other hand, aggregated $4,151,709, of which $1,557,441 came from Japan, $658,244 from India for sugar bags, and $325,637 from Chile for fertilizer material (nitrates). The value of the coal imported from foreign countries was $321,543 (137,009 tons), rather more than usual, owing to the scarcity and high price on the Pacific coast. Customs receipts for the year were $1,458,843, all of which goes into the Federal Treasury as a contribution from 150,000 people, in addition to their local taxation, which is heavy. The following per capita figures of Hawaii, on a basis of 150,000 population, of whom 70,000 are Japanese, are of interest:

	Per capita
Imports from mainland	$94.83
Imports from foreign countries	27.68
Imports from Japan	10.38
Exports to mainland	195.76
Exports to foreign countries	1.23
Customs duties paid	9.73

Outside of sugar the principal articles of export during the last fiscal year were: Coffee, 1,098,374 pounds, worth $128,875; rice, 3,324,107 pounds, worth $147,439; fruits, $394,015; hides, $141,883; wool, $54,548, and honey, $26,614. A review of the sugar movement for ten years shows that for the year 1898 the average export price was 3.33 cents per pound, while for the year 1907 it was 3.34 cents. Twice only has the price gone slightly above 4 cents—in 1900 and 1905—while its general range has been from 3.30 to 3.35 cents. Within ten years, with the price of the principal Hawaiian crop practically unchanged, there has been an advance of exactly 50 per cent. in the cost of the labor employed in producing it.

Since 1900 the island sugar crop has steadily increased, the exports being 691,000,000 pounds in that year, up to 811,603,000 pounds in 1905, back to 712,560,997 pounds in 1906, and up again to 803,249,000 pounds for the year ending June 30, 1907. The crop of 1906-07 has all been harvested but not yet shipped. It is expected that its total will be the largest on record, aggregating from 430,000 to 450,000 tons. For the crop of 1907-08 the season has been an extremely favorable one, with an abundance of rain, the cane everywhere appearing to be in excellent condition. Field operations will begin in December on the early plantations.

The largest individual order that has ever been placed in the Hawaiian Islands has just been embodied in the form of a contract between the Atchison, Topeka & Santa Fe Railway Company and the Hawaiian Mahogany & Lumber Company. The order calls for 90,000,000 board feet of Ohia lumber, to be delivered on the mainland within the next five years in the form of railroad ties, the consideration being between $2,500,000 and $3,000,000.

As is known, all the railroads in the United States are experiencing more or less difficulty in securing ties. Samples of the Ohia timber were sent east, where it was submitted to the most severe tests in comparison with the white-oak tie, which is considered the standard in tensile strength, spike-holding qualities and fiber. Taking the oak tie as the standard with a percentage of 100, the Ohia was shown to be of 30 per cent. better quality. This resulted in a visit of the Atchison's representative to Hawaii to inspect the forests, and the placing of the order, which also includes the delivery of 500 sets of switch ties every year, these being heavier and longer than the regular tie. The amount of freight involved is 50,000 tons and the first shipment will be made early in 1908. This lumber comes from forests on the large island of Hawaii, comprising 20,000 acres. The lumber camp is located at an elevation of 4,000 feet, close to the volcano of Kilauea, and within thirty miles of the city of Hilo, whence the lumber will be shipped after reaching here by rail.

Another Hawaiian product for which an entirely new demand has developed in a sample way is "pahoehoe," or the fine, brittle and close-grained lava that has spread over a large part of this island from volcanic eruptions. A lot of 250 tons is being shipped from here this week to San Francisco. For what purpose it is intended is kept a secret. It is easily melted and under the influence of heat turns into a thick black substance resembling tar, but without its odor. Naturally, there is an abundance of pahoehoe available for the mere cost of quarrying, and when it is removed from the surface there is a rich soil beneath to the depth of at least six feet.

Agricultural industries that are being rapidly developed here are the production of rubber and pineapples. There are fully 5,000 acres of land in the territory planted to rubber trees, and tests that have been made by the officials of the Department of Agriculture show the most encouraging prospects, although there has not yet been any rubber available for market. Of pineapples, one factory has alone turned out 2,500,000 cans, or 200,000 cases, and the entire pack of the territory will approximate 300,000 cases, of a value of $750,000. Both climate and soil are especially adapted to the cultivation of pines, and factories are being erected all over the islands, farmers selling their crops from one or ten acre lots to the factories at prices ranging from $20 to $27.50 a ton according to quality, the yield ranging from four to ten tons an acre according to the productiveness of the soil and the intensity of the cultivation.

ENGLISH COTTON GOODS TRADE QUIETER.

Manchester, November 15.—It is a long time since the Lancashire cotton trade experienced such a quiet period as during the past four weeks. No large orders have come for either spinners or manufacturers, and order lists to-day are perhaps lighter than for several months back. Manufacturers are in a decidedly poor way. Certain producers have little work to go on with, and in other directions looms are stopped for want of orders. No free buying has occurred, and the advices coming from markets abroad are discouraging. To buy yarn to-day and sell cloth is undoubtedly a lean business, and, in fact, some orders recently taken have been at a definite loss. If relief does not come before long, it seems pretty certain that organized short time will take place on a fairly large scale. Buyers for our markets abroad are slow in giving out fresh orders. India is badly situated owing to poor crops. It is said that the yield in most kinds of grain will be less than last season. This refers specially to the Punjab and the Northwestern Provinces. China has also been quiet, buyers not being disposed to operate freely in view of the decline in the price of silver. Only a sorting-up business has been done for the Mediterranean markets, and South American outlets have given very little support. All round we have experienced a dragging demand, and at the time of writing there appear to be few signs of improvement. Printing cloths made in Burnley are perhaps worse situated than any other makes on the market.

Although orders received by manufacturers are on a small scale, our shipments of piece goods continue to increase as compared with last year. The following comparative table is interesting:

	October, yards	*Ten mos., yards*
1907	521,680,500	5,304,227,200
1906	509,948,200	5,258,663,300
1905	509,733,400	5,112,879,500

Home trade demand for cloth has been fairly encouraging. Distribution of heavy goods for the autumn trade has compared favorably with last year. Buyers, however, are slow at giving out orders for spring, there being a disposition to expect lower rates later on. Velveteens are experiencing a healthy demand, and flannelettes are moving off better than for some years back.

The demand from abroad for cotton yarns has not been anything like so extensive as a few months ago. Shipments, however, continue on a free scale, the following comparative table speaking for itself:

	October, pounds	*Ten mos., pounds*
1907	19,122,900	172,788,000
1906	14,368,700	140,851,600
1905	16,430,300	134,612,800

A marked feature of our shipments so far this year is the big takings by Germany, the weight for the ten months being over 22,000,000 pounds more than in 1906. The Netherlands are better customers than in 1906, and Russia increased her shipments. Japan is not doing so well, and Turkey is also rather unsatisfactory. Continental buyers for the moment seem to have bought sufficiently to meet their requirements for some time to come, and fresh orders of weight are scarce. Some business for India in single yarns has been offering, but very little has been put through.

Manchester is not inclined to pin its faith to any particular estimate of the American crop. The opinion is gaining ground, however, that the yield will not be equal to last season. Should no short time be worked, however, the consumption in Lancashire will be much larger. In view of the situation, present prices can scarcely be considered abnormal. The outlook, however, is very uncertain. The Egyptian crop is not likely to be much larger than last year, the estimate of the Alexandria General Produce Association being 6,750,000 to 7,000,000 cantars. The growth for last season amounted to nearly 7,000,000 cantars.

EDITORIAL NOTES.

The following figures compare the American and Canadian stocks of wheat on or about the first of each month since January 1, 1905, with those held in Europe on the same date, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,9	83,0	88,1	86,7	163,4	163,5	138,6
April 1	83,5	70,6	46,4	83,6	90,7	89,8	167,1	161,3	136,2
May 1	81,4	55,2	38,5	86,8	87,7	86,2	168,2	142,9	124,7
June 1	73,1	43,7	29,0	82,5	82,7	82,4	155,6	126,4	111,3
July 1	65,5	35,1	19,0	71,3	74,7	80,2	136,8	109,8	99,2
August 1	63,7	43,1	20,9	62,3	62,7	72,1	126,0	105,8	93,0
Sept. 1	66,4	45,6	22,8	63,8	70,7	73,0	130,2	115,9	95,8
Oct. 1	62,8	64,6	38,6	71,2	83,2	80,2	134,0	147,8	118,8
Nov. 1	66,7	73,0	58,2	76,7	90,1	75,9	143,4	163,1	134,1
Dec. 1	....	78,7	68,3	....	89,7	83,8	....	168,4	152,1

The total American and European stock on November 1, 1907, was 143,400,000 bushels, an aggregate 19,700,000 bushels less than a year ago, but 9,300,000 bushels more than on November 1, 1905.

Besides sharing in the general depression which unsettled money market conditions have brought upon the stock market, New York Central shares have been the objects of a good deal of unfavorable comment and active bearish pressure. The fact that at a recent meeting of the directors a special committee, constituted about a year ago to frame a plan making provisions for the financial needs of the company, was reappointed—the deduction being that it had not been able to devise a satisfactory plan—furnished occasion for a great deal of talk about the company's financial position. That a considerable amount of fresh capital is needed by the Central in order to defray the cost of the further improvements in progress or planned for its system of lines is generally conceded. It, however, would seem an unwarranted inference that it could not obtain fresh loans, nor would it necessarily follow from the facts, as far as they are known, that the present 6 per cent. dividend rate on the stock would have to be reduced, as some of the bearish critics of the company intimate. The present week brings the announcement that the New York Central management has effected a financial operation of considerable magnitude and importance, involving the raising of $20,000,000, which is to be supplied by one of the large New York City trust companies. This borrowing, however, takes the form of equipment notes, or a car trust, for the amount in question, bearing 5 per cent. interest and redeemable in yearly installments during a period of fifteen years. The notes are secured by new equipment, embracing an aggregate of some 11,000 new engines and cars for the various roads composing the New York Central or Vanderbilt system, and the arrangement seems calculated to provide in an ample degree for the time being, at least, for the needs of the company in that respect. Whether this foreshadows further emissions of stock, notes or bonds for other purposes when financial conditions will permit the success of negotiations to that end, remains, however, to be seen.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Ordinance—Gas Tank—Consent.

A municipal ordinance regulating the construction of buildings within the city declared that it would be unlawful to erect a gas tank or holder therein without the written consent of the owners of all the property within a radius of 1,000 feet from the site of such building. The Supreme Court of Nebraska held, in the case of State ex rel. Omaha Gas Company vs. Withnell, that this provision was void.

Bank—Check—Telegram—Inquiry.

The Supreme Court of Kansas held, in the case of The First National Bank vs. Commercial Savings Bank, that a telegram stating that a certain person's check was good for a sum named, sent by a bank in response to a telegraphic inquiry as to whether such person's check was good for such amount, did not impart an absolute promise to pay the amount of the check or constitute a contract of acceptance external to the bill.

Insolvent Bank—Territory—Priority.

The Supreme Court of Oklahoma held, in the case of Cherry vs. Territory, that a territory had no right to claim priority over other creditors of an insolvent bank in which a public officer without any authority had deposited money, checks and drafts derived from the leasing of the school lands of the territory, where it did not affirmatively appear by a preponderance of the evidence that the particular money, checks and drafts so deposited, or their proceeds, were turned over to the receiver of the bank.

Contract—Fraud—Enforcement.

The Supreme Court of Kansas held, in the case of Shook vs. Puritan Manufacturing Company, that where inquiry as to the contents of a written contract is lulled by fraud and deceit, and one party is induced to sign the contract by the false representations of the other that it contains the provisions agreed upon, when in fact it does not, the party who procures the signature by fraud is not entitled to enforce such contract, although the one who signed it did so without reading it or having it read to him.

Bankruptcy—Jurisdiction—State Process.

The United States Circuit Court of Appeals for the Fifth Circuit held, in the case of The Linsbroth Wagon Company vs. Ballew, that the institution of a bankruptcy proceeding does not draw to the jurisdiction of the bankruptcy court property which has previously been seized under process from a state court, in a suit to rescind for fraud its sale to the bankrupt, if the title is adjudged by the state court to be in the vendor, and that the bankruptcy court cannot, therefore, properly dispose of the property.

Trade-Mark—Infringement—Quality.

The United States Circuit Court for the Southern District of New York held, in the case of Eiseman et al. vs. Schiffer et al., that after the use by one merchant of a trade-mark on certain selected all-silk fabrics and its registration as a trade-mark for "silk dress goods in the piece," the use of the same mark by others on silk dress goods, though of wholly different kind and of better quality, was an infringement, and that it was immaterial that such later use was without knowledge of the prior use and without any intention to capture the older trade.

Insurance—Homestead—Ownership.

An insurance policy on property provided that it should be void "if the interest of the insured be other than unconditional and sole ownership, or if the subject of insurance be a building on ground not owned by the insured in fee simple." The Supreme Court of Idaho held, in the case of Allen vs. Phoenix Assurance Company, that there is no such failure of title as to defeat the right to recover on such a policy where the property insured is situated on a government homestead owned and claimed by the insured in which the legal title remains in the United States government and on which final proof is not made until after loss by fire.

Georgia Railroad Tax Cases.

The case of The Georgia Railroad Company vs. Wright, decided by the Supreme Court of the United States, involved the right of the state of Georgia to collect back taxes on the stock of the Western Railway of Alabama, a company of which the stock is jointly owned by the Georgia Railroad & Banking Company and the Central of Georgia Railway Company. The taxes sought to be collected ran back to 1895, and the company alleged that they were excessive and discriminating because no such proceeding had been undertaken against any other railroad. The decision of the court was adverse to the state. Another case involving taxes on stock of the same railroad company was that of The Central of Georgia Railway Company vs. Wright et al., but this case was further complicated by the circumstance that the stock was in the possession of a trust company in New York, by which it was held to secure the payment of certain bonds. The decision of the Supreme Court in favor of the railroad company was based on the denial to the latter of the right to be heard, which, it was held, was a denial of due process of law as required by the constitution of the United States.

Bankruptcy—Trustee's Duty—Liability.

The United States Circuit Court of Appeals held, in The Matter of Reinboth et al., that trustees in bankruptcy, like executors and administrators, are bound to use due diligence to get in the assets of the estate, and that a trustee may be charged with the value of assets which never came into his hands if he failed in his duty to collect or secure possession of them. In this case the court held that the referee erred, upon the accounting of a trustee, in refusing to admit in support of exceptions to the account evidence tending to show that the trustee had been remiss in his duty of acquiring possession of property belonging to the estate.

Bank—Pass Book—Gift.

The Kentucky Court of Appeals held, in the case of McCoy's Administrator vs. McCoy, that there may be a gift of money on deposit in a bank by a delivery of the pass book, whether the money is in a savings bank or an ordinary deposit bank. In this case it appeared that a mother who was ill called her son to her and asked him to go to the cupboard and get her pass book, which he did and handed it to her. Thereupon she handed it back to him, saying, "This is yours," and requested him to pay her debts and not squander it. The next day she became unconscious and remained so until she died. The pass book contained a deposit account in a savings bank of $1,209, and a note for $402. The court held that the transaction amounted to a complete delivery of both money and note, whether it be treated as a gift inter vivos or causa mortis.

Trade-Mark—Removal—"Chartreuse."

The United States Circuit Court for the Southern District of New York held, in the recent case of Baglin vs. Cusenier Company, that the word "Chartreuse" was a valid trade-mark and not a place name; that it indicated a liqueur manufactured by the order of Carthusian monks, "Peres Chartreux," and was personal in its significance; that the Carthusians having carried their business with them to Spain when expelled from France by the French government, the receiver of their deserted factory and other assets appointed by the French government was not their successor but their competitor, and that the trade-mark accompanied the business and continued as the exclusive property of the order. The court said that a business does not inhere in a place or building, but the same business may be carried on after removal to new quarters, and that a trade-mark does not depend for its validity upon the continuance in one location or country of the business which gave rise to the trade-mark.

Married Woman—Note—Surety.

The Kentucky Court of Appeals held, in the case of Black vs. McCarley's Executor, that under section 2127 of the Kentucky Statutes of 1903, providing that no part of a married woman's estate shall be subjected to the payment of any debt of her husband contracted after marriage, a married woman cannot be held liable on a note signed by her as surety for her husband. This case arose out of an action by the executor of one McCarley against the widow of one Black on a note signed by the latter and the widow, who was then his wife, dated March 30, 1898, payment of which she resisted on the ground that she was only a surety thereon. On the trial a witness identified a check dated March 29, 1898, on a banking company payable to the order of McCarley and indorsed by him to Black, followed by the indorsement of the latter. The court held that this was some evidence that Black was the beneficiary of the note and that Mrs. Black was merely surety, and that in the absence of any other evidence this was sufficient to authorize a peremptory instruction to the jury to find for the defendant, Mrs. Black.

BUSINESS NOTES.

Vessel Tonnage of Japan.

This table, taken from an article contributed to the London *Economist* by M. Masuda, gives the registered vessel tonnage of Japan:

	Ships less than 1,000 tons		*Ships over 1,000 tons*		*Total*	
	No.	*Tonnage*	*No.*	*Tonnage*	*No.*	*Tonnage*
1906	1,171	214,770	321	826,540	1,492	1,041,310
1905	1,098	189,160	292	743,580	1,390	932,740
1904	983	159,140	241	631,910	1,224	791,050
1903	891	145,070	197	511,670	1,088	656,740
1902	850	134,760	182	469,860	1,033	604,620
1901	799	133,550	170	443,640	969	577,190
1900	700	123,700	159	410,540	859	534,240
1899	605	115,970	148	382,400	753	498,370
1898	530	107,160	144	357,080	674	464,240

This increase in ships naturally contributed to a great increase in commerce, and the value of cargoes carried in Japanese ships advanced by leaps and bounds.

	Japanese ships, yen	*Per cent.*	*Foreign ships, yen*	*Per cent.*
1903	224,200,000	37.0	380,600,000	63.0
1900	148,300,000	33.7	334,200,000	66.2
1896	33,700,000	11.8	250,800,000	88.1
1892	15,600,000	9.7	144,500,000	90.2

World's Output of Coal.

In the last forty years the world's annual production of coal has increased from 221,035,230 tons to 1,106,478,707 tons, an increase of 885,443,277 tons, or 400.58 per cent. The production of coal in the United States in the same period has risen from 31,648,960 tons to 414,157,268 tons, an increase of 382,508,308 tons, or 1,208.59 per cent. Below will be found a table giving the production, in net tons, of coal in the United States, compared with the production of the world for a number of years. The percentage of the United States of the world's production is also given:

	Production of U. S.	*World's production*	*Per cent. of U. S.*
1887	130,650,511	481,412,743	27.14
1888	148,659,657	521,225,803	28.52
1889	141,229,513	531,797,039	26.56
1890	157,770,963	563,693,232	27.99
1891	168,556,669	587,554,583	28.69
1892	179,329,071	593,497,904	30.22
1893	182,352,774	582,638,296	31.30
1894	170,741,526	610,487,368	27.97
1895	193,117,530	644,177,076	29.98
1896	191,986,357	644,004,718	28.02
1897	200,229,199	697,213,515	28.72
1898	219,976,267	738,129,608	29.80
1899	253,741,192	801,976,021	31.63
1900	269,684,027	846,041,848	31.88
1901	293,299,816	870,711,044	33.69
1902	301,590,439	888,644,787	33.94
1903	357,356,416	973,142,329	36.72
1904	351,816,398	978,087,741	35.98
1905	352,694,000	929,683,000	37.93
1906	414,157,268	1,106,478,707	37.43

In the past twenty years the world's output of coal has increased practically 130 per cent., and in the same time the output of this country has advanced 218 per cent.

The Production of Common Brick.

Of the long list of mineral products of the United States concerning which statistics are collected by the National Geological Survey, only three—pig iron, copper and bituminous coal—exceeded in value in 1906 the products of the clays; and of the clays themselves the product ranking highest in value was, as heretofore, the common brick, of which more than ten billions—to be exact, 10,027,039,000—were marketed during the last year, says the Geological Survey. The value of this great product amounted to $61,300,696, an increase of $93,687 over the value for 1905, and constituted 47.30 per cent. of the value of all the brick and tile products and 38.07 per cent. of the value of the entire product of the clay industries. The largest production of common brick in 1906 by any one state was reported by New York, whose output amounted to 1,535,579,000 brick, valued at $9,205,981, or about $6 per thousand. This quantity represents 15.31 per cent. of the entire output of the country, and the value is 15.02 per cent. of the total. The greater part of New York's common brick comes from the Hudson river region. Next to New York, the largest producer of common brick in 1906 was Illinois, which reported an output of 1,195,210,000 brick, valued at $5,719,906, or $4.79 per thousand. The great common-brick producing region of Illinois is Cook county, and it was the decline in price in this district that brought the average price per thousand for the state to $4.79, the lowest for several years. The only other state reporting more than a billion common brick was Pennsylvania, whose marketed output amounted to 1,027,541,000 brick, valued at $6,586,374, or $6.41 per thousand. While third in quantity the product of this state was second in value, and the average value per thousand was greater than that for either New York or Illinois. Ohio's production of common brick in 1906 was fourth in quantity and value—550,422,000 brick, valued at $3,243,157, or $5.89 per thousand—and New Jersey's was fifth, amounting to 413,258,000 brick, valued at $2,610,686, or $6.32 per thousand. The other states range from Kansas, with 314,371,000 brick, valued at $1,376,552, or $4.38 per thousand, to South Dakota, with 6,064,000 brick, valued at $54,175, or $8.93 per thousand. California's 278,780,000 common brick were valued at $1,962,866, or $7.05 per thousand. The average price per thousand for common brick in 1906 was $6.11.

New Freight Rates.

The Trunk Line Association of Railroads, which takes in all the carriers in the eastern territory, together with their connections, have announced a winter schedule of freight rates on imported goods, to become effective December 2. The rate for transportation is substantially increased on almost all commodities—from 2 to 10 cents. The complete list, giving the old and new rate from New York to Chicago in cents per 100 pounds, in carload lots when not stated otherwise, is as follows:

	Old rate	*New rate*		*Old rate*	*New rate*
Ale, ginger	16	22	Oil, cocoanut	16	22
Alum	14	18	Oil, creosote	16	22
Arsenic	21	27	Oil, olive	18	24
Barytes	14	18	Oil, olive, in glass	32	42
Beans, castor	16	22	Oil, palm	16	22
Bottles	16	22	Oil, peanut	18	24
Chalk, crude	15	18	Olives	18	24
Champagne, l. c. l.	37	53	Paint, earth	14	18
Cherries in brine	16	22	Pebbles, flint	13	16
Crockery	18	24	Pepper	16	22
Dolls	32	45	Pipes, clay	21	27
Feldspar	16	20	Porter	16	22
Fish, canned	16	22	Preserves	16	22
Glass, plate	21	27	Pulp, wood	18	22
Glass, window	16	22	Rags	16	22
Glycerine, crude	14	17	Roots, except hops	23	30
Granite	16	22	Saltpeter	18	24
Herbs	23	30	Salts, aniline	23	30
Hides, green	18	24	Salts, Epsom	12½	15
Hides, dry	23	30	Seeds	18	24
Ink, bottles	28	38	Sheep dip	18	24
Ink, cans	21	27	Tar	16	22
Iron, bar	18	22	Tiles	16	22
Junk, old rope	16	22	Tiling	16	22
Linoleum	21	27	Tinplates	18	22
Liquors, in glass	28	38	Toys	32	45
Liquors, in wood	23	30	Toys, l. c. l.	42	59
Majolica ware	37	40	Vegetables in brine	16	22
Macaroni	16	22	Vinegar	16	22
Matting	23	30	Wire, iron or steel	16	20
Oil, china wood	16	22	Wire rods	16	20

About the only important items in the list remaining unchanged are bagging, burlap, gunny and barium chloride.

World's Shipbuilding in Fiscal Year 1907.

Lloyd's Register has completed its annual report of British and foreign shipping for the fiscal year ending June 30, 1907. At the close of the year 10,285 merchant vessels, registering about 19,750,000 tons gross, held classes assigned by the Committee of Lloyd's Register. During the year 789 new vessels were classed by the committee. Their registered gross tonnage amounted to 1,484,722 tons. Of these vessels 747, of 1,470,312 tons, were steamers, and forty-two, of 14,410 tons, were sailing ships. These vessels were all constructed, in accordance with approved plans, under the special supervision of the surveyors to Lloyd's Register. Of the total, 1,033,300 tons, or 70 per cent., were built for the United Kingdom, and 451,422 tons, or 30 per cent., for foreign countries and the British colonies. The present return of nearly 1,500,000 tons represents the greatest amount of tonnage classed during any one year in the history of the society. As compared with the figures for the preceding twelve months, which, with the exception of those for 1901-02, were the highest on record, those for the year under review show an increase of 61,733 tons as regards steamers and of 10,344 tons for sailing vessels. The following table sets forth the new tonnage classed by the society during the last ten years:

	Steam	*Sail*	*Total*
1897-98	827,132	24,463	851,595
1898-99	1,302,329	20,357	1,322,686
1899-1900	1,236,831	18,908	1,255,739
1900-01	1,328,395	26,916	1,355,311
1901-02	1,381,750	43,666	1,425,416
1902-03	1,182,265	68,155	1,250,420
1903-04	1,051,960	27,085	1,079,045
1904-05	1,189,769	11,058	1,200,827
1905-06	1,408,579	4,066	1,412,645
1906-07	1,470,312	14,410	1,484,722

Thus it will be seen that the increase scored in the decade covered amounts to more than 74 per cent.

NEW YORK BOSTON CHICAGO

CURRENT BUSINESS NEWS.

Commercial.

A law has just been enacted that provides that customs duties may hereafter be paid in the currency of Chile instead of gold, as heretofore. The director of customs is to announce, the first of each month, the rate of exchange that is to govern for the month. For September, 1907, the premium on gold was fixed at 47.8 per cent

Broomhall's weekly foreign crop summary, published Tuesday, said seeding was making good progress under good weather conditions in the United Kingdom and Italy. In France seeding was about finished and supplies were liberal. The outlook for seeding continued favorable in Spain. Barcelona estimated the import requirements at 20,000,000 bushels. Various complaints were heard over Germany as a result of drought, vermin and cold weather, and supplies were only fair. As a result of recent rains the outlook in Austria-Hungary was more favorable. The weather in Roumania was mild and rainy, which was favorable for wheat. Stocks at the ports and on barges were large, but in the interior they were practically exhausted. There was no change in the outlook in Russia. Ports continued to sell wheat to the interior. Conditions in the north of Argentina were less favorable, as dry weather was wanted. From Australia came reports of a marked improvement in districts where wheat was planted late.

The following is a statement of the variations in the London *Economist's* index number for each month of the current year, and at intervals since the end of 1902:

End of	*Index No.*	*End of*	*Index No.*
October, 1907	2414	November, 1906	2501
September, 1907	2457	October, 1906	2458
August, 1907	2519	September, 1906	2355
July, 1907	2571	June, 1906	2362
June, 1907	2594	March, 1906	2306
May, 1907	2601	December, 1905	2342
April, 1907	2549	June, 1905	2163
March, 1907	2516	December, 1904	2136
February, 1907	2521	June, 1904	2130
January, 1907	2494	December, 1903	2197
December, 1906	2499	December, 1902	2003

The revised Chilean tariff will go into effect January 1 next. Under the new tariff the President is authorized to reduce by 50 per cent. the import duties on woolen and flaxen textiles, footwear, galvanized iron, and sugars.

A plan to reduce the acreage of cotton next year, in an effort to control its price, was arranged Saturday last by the board of directors of the Farmers' Educational and Protective Union of America at New Orleans. A meeting was called, to be held in Memphis on January 7 next, to lay this plan before the cotton farmers of the south. The proposed reduction in acreage of cotton is to fix the minimum price of cotton at about 15 cents a pound.

The following was the value of French foreign trade in the first ten months of the last two years:

Imports	1907	1906
Food	F814,535,000	F731,993,000
Raw materials	3,164,509,000	3,039,277,000
Manufactures	955,116,000	811,210,000
Total	4,934,160,000	4,582,480,000
Exports		
Food	F602,550,000	F575,417,000
Raw materials	1,266,565,000	1,200,930,000
Manufactures	2,384,714,000	2,201,355,000
Post parcels	319,084,000	308,851,000
Total	4,572,913,000	4,286,553,000

The post parcels comprise 32,590,000 francs of silk goods, against 26,825,000 francs in 1906.

The French government on Thursday gave out the text of the Franco-Canadian treaty, which, when ratified by the respective parliaments, will replace the treaty of 1893 and will operate for ten years. Either party, however, has the right to withdraw on one year's notice. By the treaty France gives to Canada a minimum tariff on horses, cattle, poultry, salted meats, canned goods, eggs, cheese, butter, fresh and salted fish, wheat, oats, barley, rye, maize, potatoes, fruits, lumber, vegetables, fodder, coal and metals. Canada gives an intermediate tariff on meats, poultry and game, cheese, fruit trees, perfumery, medicinal wines, soap, pomade, glass, locomotives, automobiles, laces, cotton and linen thread, dress goods and woolens. The signatories reciprocally agree to extend the most favored nation administrative treatment in connection with all commerce between the two countries.

Argentina's exportable surplus of wheat is officially estimated at about 148,000,000 bushels. So far this season the exports have amounted to 101,072,000 bushels. It was recently estimated that Argentine would be required to supply 120,000,000 bushels during the next thirty-two weeks. Latest advices report that wheat in the north has been slightly damaged by hail.

Latest advices report the crop outlook in India as being worse than heretofore reported. It is probable that there will be no wheat for export during the season of 1908. So far this season exports have amounted to about 30,000,000 bushels.

A reduction of 2 cents a gallon has been made in the price of linseed oil.

The wheat crop of south Australia is officially estimated this season at 15,750,000 bushels, against 17,100,000 bushels last year and 20,100,000 bushels in 1905.

A. Sauerbeck, in the London *Times*, gives the following index numbers of prices of forty-five commodities, the average of the eleven years 1867-77 being 100:

Average		*Monthly numbers*	
1878-87	79	February, 1895	60.0
1887-96	68	July, 1896	59 2
1890-99	66	July, 1900	76.2
1897-1906	70	December, 1901	68.4
	—	October, 1906	78.5
1883	82	December, 1906	79.7
1896	61	March, 1907	80 0
1900	75	April, 1907	86.7
1901	70	May, 1907	82.4
1902	69	June, 1907	82.0
1903	69	July, 1907	81.1
1904	70	August, 1907	79.4
1905	72	September, 1907	79.1
1906	77	October, 1907	78.8

Crop estimates of 146 members of the New York Cotton Exchange range from:

	Bales
Highest	13,200,000
Lowest	10,750,000
Average	11,973,000

Last year's estimate by 161 members are here given for comparison:

	Bales
Highest	13,650,000
Lowest	11,250,000
Average	12,457,000

The 1906-07 cotton crop, according to Superintendent King's annual report, was 13,539,948 bales.

An official report places the total yield of wheat in the Canadian northwest at 64,675,000 bushels on an acreage of 5,013,544, an average of 12.9. Some experts figure that this would mean not more than 50,000,000 bushels of milling wheat, from which must be taken the seed for next season's sowing. The official report included about 93,000 acres of winter wheat.

Broomhall's agent at Sydney estimates the exportable surplus of the commonwealth of Australia at a minimum of 15,200,000 bushels. The latest estimate of this year's crop in the commonwealth was 34,700,000 bushels. In 1906 the crop of the commonwealth was officially placed at 65,000,000 bushels, and during the subsequent twelve months 34,000,000 bushels were shipped for export.

The Alabama Cotton Manufacturers' Association, representing 810,000 spindles in that state, met at Birmingham, Tuesday, and unanimously adopted the following resolutions: "Resolved, That in view of the financial depression now confronting the business interests of the country, and the numerous and peculiar difficulties affecting the manufacturing of yarns and cotton goods, it is the sentiment of the Alabama Cotton Manufacturers' Association, composed of nine-tenths of the Alabama cotton mills, that the production of all goods at all mills be curtailed until normal conditions are reëstablished."

Secretary Taft predicts a future development for Siberia as great as and similar to that of the American Western States.

The Russian delegates to the International Sugar Conference announced Thursday that their government has decided upon important concessions. The admission of Russia to the Sugar Convention now appears to be assured.

Financial.

The United States Exchange Bank of New York reopened Monday.

The Northern Pacific Railway now has 9,000 stockholders, against 4,200 six month ago; in the same time the number of Chesapeake & Ohio stockholders has increased from 1,200 to 2,200. In the six months previous to November 15 there were 1,200 stockholders added to the transfer books of the Chicago, Milwaukee & St. Paul.

The Empire City Savings Bank, New York, which on October 24 informed its depositors that a month's notice would be required before depositors could withdraw their money in sums over $50, began Saturday morning last to pay all amounts on demand.

The Quincy Mining Company, producing copper, cut its quarterly dividend Monday to $2. The last dividend paid by the company was $2.50 per share, in September. The dividend is payable on December 23.

The United Copper Company at New York, Saturday last, by authorization of its board of directors, passed without action the semi-annual dividend of 3 per cent. on the $5,000,000 6 per cent. cumulative preferred stock, due the 15th.

When the books of the Pennsylvania Railroad closed on November 4 the number of stockholders was 52,622, as compared with 49,572 on October 1. This is an increase in thirty-five days of 3,050, or a little more than 6 per cent.

The directors of the Butte Coalition Copper Company, at a meeting Tuesday, declared a quarterly dividend of 15 cents a share, which compares with a dividend of 50 cents a share in the preceding quarter.

The Twelfth Ward Bank of New York, which was closed on October 24, reopened for business Wednesday. One of the officials said when the day's business was over that something more than $100,000 had been deposited.

Postal savings banks were established in New Zealand in 1867. On December 31, 1906, the 540 post offices doing a savings bank business had 298,746 accounts, covering deposits aggregating $48,766,325, an average of $166.50 for each account, and representing a sum equal to $56 a head of the entire population of the colony. On this basis a United States post office savings bank system would have 27,400,000 accounts and $4,600,000,000 in deposits.

It was announced Tuesday that the United States Steel Corporation had purchased enough of its 5 per cent. sinking fund bonds to be able to take up with the bonds all the stock of the Tennessee Coal and Iron Company. Since the issue of the bonds was created the company has reserved $30,000,000 in its treasury to convert into cash or purchase other property, and at the time of the Tennessee Coal and Iron deal it was supposed that these bonds were all that were held by the company available for such a purpose. The amount of bonds needed to acquire all the Tennessee Coal and Iron stock was $38,500,000. The remaining $8,500,000 have been purchased in the open market, the company's charter giving it a right to purchase its own stock and bonds.

With two exceptions, every leading bank in Philadelphia has signed a petition asking the Comptroller of the Currency to designate Philadelphia as a central reserve city for the deposit of national bank funds. It is necessary under the law to have the assent of three-quarters of the banks in any one city in order to get this privilege.

W. H. Newman, president of the New York Central, was reported Tuesday as saying that none of the $30,000,000 equipment trust certificates, creation of which was announced on Monday, would be sold in the immediate future. The certificates, it was explained, will be held in the company's treasury and be used to reimburse it or subsidiary companies for equipment expenses whenever a favorable occasion arises to dispose of them. It is said that the Guaranty Trust Company simply acts as trustee in the matter, and is under no obligation whatever to supply any money.

The first sale of Chase National Bank stock in more than twenty years occurred Wednesday, when 400 shares were sold at auction. The price received was only 181, a low record, comparing with a bid quotation of 225 Saturday last, and 310 a little more than a month ago. The stock of the Chase Bank has been closely held for many years, five of the directors being credited with having all but a few shares. Last December the capital was increased from $1,000,000 to $5,000,000, accompanied by a stock dividend of 400 per cent. The last sale of stock of this bank is said to have taken place in 1886.

Hugh Kelly has been elected president of the Oriental Bank, vice R. W. Jones, Jr.

The directors of the Great Northern Paper Company met Wednesday and deferred action on the dividend. The company usually pays 1½ per cent. quarterly.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

The banking house of Speyer & Co. announced Wednesday that a plan was under consideration for the "extension and conversion" of the notes of the Underground Electric Railways Company of London, Ltd, and "the provision of further moneys for the requirements of the company." The notes are an issue of $35,000,000 sold in 1904, and they mature June 1 next.

The Copper Range Consolidated Company has declared a quarterly dividend of $1 a share. The previous disbursement was $1.50 and an extra dividend of 50 cents on October 1 last.

Industrial.

It is stated that the H. C. Frick Coke Company has closed down every coke oven in the Connellsville and adjoining region, throwing 15,000 men out of employment and leaving 30,000 ovens idle. Independent producers are following suit, so that about 20,000 men in the coke region are out.

Announcement was made Wednesday that orders on the books of the Republic Iron & Steel Company warranted a resumption of operations in its plants, which were recently shut down. Another plant of the company at Youngstown will start next week. It is also reported that the Shenango Iron & Steel Company's plant at Wheatland, Pa., which has been closed for some time, has reopened.

According to the *American Federationist*, 1,649 labor unions, with a membership of 127,500, had 1.4 per cent. of that number idle in October. In September the ratio was 2.2 per cent., and in October the percentage was about three-fourths of 1 per cent.

The building of automobiles in the leading industrial countries of the world has advanced at an astonishing rate since 1898. Then France, England and Germany were about the only countries in which these machines were manufactured. The figures for 1906 show that six countries turned out 185,000 automobiles. The record of each of these countries, from 1898 to 1906 inclusive, is given below:

	France	*Engl'd*	*Germ'y*	*Belgium*	*Italy*	*U.S.*
1906	55,000	28,000	21,003	12,000	9,000	60,000
1905	47,302	20,048	15,682	7,927	8,870	23,877
1904	37,322	14,170	11,370	5,020	3,080	11,374
1903	30,204	9,437	6,904	2,839	1,308	2,722
1902	23,711	6,253	4,738	1,700	350	314
1901	16,486	4,112	3,209	600	300	....
1900	10,030	2,481	2,312	400	....	....
1899	4,914	1,143	1,478	....	....	....
1898	1,631	682	894	....	....	....

Railroads.

Samuel M. Felton has resigned from the presidency of the Chicago & Alton. It is stated further that Theodore P. Shonts will be elected in his stead.

A subway train went from the Bowling Green station to the station at Borough Hall, Brooklyn, at noon Wednesday in just fifteen minutes. It was the first train to be run through the new tube under the East river connecting the borough of Manhattan with Brooklyn.

Logan G. McPherson presents in an article in the *North American Review* for November data based upon statistics compiled by the Bureau of the Census which show that the average net return upon manufactures in the United States in 1900 was 19.4 per cent., in agriculture 9.2 per cent., and in the railway business 4.1 per cent., and that in 1905 the net return in manufactures was 15.1 per cent, in agriculture 9.8 per cent. and in the railway business 4.4 per cent.

On Wednesday the United States Court of the Fifth Circuit granted an order restraining any officer or individual from putting into force any of the rate or regulation laws passed by the recent extraordinary session of the Alabama legislature.

Miscellaneous.

The preliminary estimate of the Cuban census places the total population of the island at 2,000,000, of whom 400,000 are foreigners.

It is reckoned that upward of 50,000 emigrants left this country from the port of New York this week.

It is figured that if less than one-half of the swamp lands of the United States should be reclaimed they would afford homes and support to 12,000,000 persons by giving each family a 40-acre farm. The increase in the value of 50,000,000 acres by drainage would be $5,000,000,000, and it is estimated that a like sum would be spent upon them for improvements.

STOCK EXCHANGE CLOSED. (Thursday, November 28)

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The improvement in tone of financial affairs has become more widespread, so notable, indeed, as to give a much more cheerful appearance to the entire situation. For one thing the security markets have displayed more evidences of healthy strength than for a long time past, the money market has shown signs of loosening up, the currency premium has dropped quite materially—close to the vanishing point, in fact—and the expectations are widely entertained or expressed that the country will be back upon a cash payment basis in a few weeks. But trade is still quiet the country over, and new buying, owing partly to holiday observances, and also to mild weather, which is still a check on retail trade, is small, while industrial operations are still being restricted.

With the easing in the money situation has come a more liberal marketing of the country's products, and grain receipts at interior markets are certainly larger, part of which is due no doubt to the greater strength exhibited by cereals and cotton, which in turn primarily reflect the better feeling at money markets. The prices situation as a whole, however, shows signs of readjustment to the changed conditions of demand, and live animals, provisions and meats and other food products have declined quite sharply. The labor situation, too, shows evidences of the slowing down of industrial operations. Railroad traffic is appreciably smaller than for many weeks past, and the car shortage evil has disappeared just as the close of water navigation approaches. Large numbers of men employed in railway construction work have been laid off and building is apparently much less active, two features not uncommon as the winter season approaches. The movement of emigrants from Atlantic ports to Europe is reported unprecedented, these people leaving the country by thousands. Some of this is, no doubt, the normal movement seen every autumn, but much of it is explained as showing that a quiet spell is looked for in industry here, and that living abroad is cheaper till activity is resumed.

The features in distributive trade are the conservatism in buying for immediate necessities and the disposition to postpone future buying till later. Still there is, as predicted last week, less nervousness as to the business already booked, and while cancellation talk is quite common, still there is a disposition on second thought to reinstate some of the orders canceled earlier in a stampeded way. Many manufacturers have aided in restoring confidence by giving notice that cancellations will not be accepted, though deliveries may by delayed to suit conditions. The iron and steel, knit goods and cotton goods lines especially report this. On the other hand, there is no disposition to accumulate stocks, and factories are suspending or curtailing where necessary. All this is in the direction of ultimate improvement.

Collections are still very poor, with numerous extensions being asked and in many cases granted. While the banking situation is improving, loans are not being made with any degree of freedom, and rates are still prohibitory. At the same time the system of inland exchange, which has been in disordered shape for over a month past, seems to be again tending toward normal, although there is still much room for improvement in that respect.

The detailed telegrams point to the wave of recession in demand reaching some sections just as things have begun to improve at other points. Things are rather quieter at Pacific coast and far western points, but, on the other hand, there is an accession of cheerful feeling and some reinstatement of orders at the east. Retail trade the country over still reflects the mild weather as a brake upon current demand for winter-wear goods. Southern reports as a whole are quiet, though the financial feeling is better, in keeping with advices from the east and the advance of ½ cent per pound in cotton. Reports of especially quiet trade come this week from lumber, prices for which are easier, and production is being restricted. The cotton yarn, leather, wool, iron and steel and coal trades also note quietness beyond the normal. The less active movement on the railways is reflected in decreases in weekly gross receipts from this date a year ago. Bank clearings returns are also much smaller than a year ago, but failures are no more numerous than last week, which was, however, a full period of six business days.

Commodity prices have been irregular this week, the cereals and cotton advancing, while provisions, meats and other food products are lower. Cereals and cotton largely reflect the more confident feeling in financial markets and the abatement of liquidation forced by the stringency of money. Wheat has been additionally helped by the issuance of poor crop reports, especially from India, Australia and Argentina, and the fact that, at the low record prices touched at the close of last week, a heavy export business developed. Canadian final crop reports point to a yield of 84,000,000 bushels, 25 per cent. below that of 1906. Prices are 3@4 cents higher on the week.

Corn was weak until about the middle of the week on the sharp drop in hogs, which are $2.50 lower than on November 1, and lower than since 1900, and the sympathetic ease in provisions and meats generally, the latter being 10 per cent. lower at all western markets. At a decline of 2 cents, however, corn steadied and advanced late in the week on poor husking returns, and provisions steadied later on reaction from the recent sharp decline. Oats are 2 cents up and wheat-flour is 10 cents higher on the week. Lowered prices for meats, poultry, eggs and butter were an incident of Thanksgiving week. Spot coffee is ⅛ cent lower on the week, and raw sugar is slightly lower, while refined is unchanged.

Cotton has been helped by the improved situation of affairs financial and gained steadily throughout the week, with a net advance of 50 points on spots and most futures. Aside from the financial situation the news has been irregularly balanced, with, if anything, bullish features slightly in the lead. Thus there has been a tendency to pare down crop estimates, and 12,000,000 bales is now the maximum estimate. The movement also continues very light, even with the stringency in money. The easing of the premium in this line was a supporting feature, as was the report that a strike in the English mills was unlikely. On the other hand, the tendency to curtail production of cotton goods, and consequently the consumption of the raw material, was a check on really bullish tendencies. Reports of short time in New England and southern mills were, perhaps, the most prominent bearish feature. Cotton yarns were very weak, but there is said to be more life in export trade in cotton goods, and the stampede to cancel orders for domestic use seems to have been checked.

While there is a better feeling as regards the future in the iron and steel trade, new business is very light and curtailment of production continues, although it is reported that a few plants have resumed operations. Nevertheless, the leading interest is operating only 50 per cent. of its blast-furnace capacity. Prices for pig iron are weaker all around, and little business has been done within the week outside of a small lot of basic pig, which was purchased in eastern Pennsylvania at a concession. It is noteworthy that pig-iron quotations are now from 14 to 29 per cent. lower than they were at this time last year, these ratios being predicated upon the basis of nominal or list prices, which in all probability could be shaded if desirable business developed. In fact, southern grades at Birmingham are quoted at $15, while $18 appears to be the ruling price for No. 2 Northern in southern Ohio. Finished lines are dull, and outputs are being adjusted in keeping with the volume of specifications appearing. Wage reductions that average about 10 per cent. are being made. The volume of new business in structural material is very small, transactions in standard steel rails are dull, and business in light rails is unimportant, prices on the latter tending to become weaker. In fact, it is said that some railways are using old rails. Scrap iron is very weak, and it may be said that the trade is in a demoralized condition. Little or no interest is displayed in ore for next year, the situation in this respect being in marked contrast to that prevailing at this time last year, when producers had practically disposed of all their higher grade ore. Price reductions are talked of, but shippers may be expected to firmly resist any such tendency. Cast-iron pipe is inactive, tinplate is dull and demand for wire products is very light. Coal is bought less freely and prices are weaker. Demand for coke is light, but prices have not declined materially, because production in the producing regions is being greatly restricted. Demand for copper from domestic consumers is probably lighter than it has been at any time this year, but the market is firmer, in sympathy with the advance in standard warrants at London. Exports for November are expected to score another new record.

Stock market sentiment and prices at New York have both tended to improve this week on the decreased money market pressure and the indications of a return to normal conditions in that respect. Much irregularity, however, has prevailed, and certain portions of the share list, notably the Gould group, exhibited weakness and recorded new low-record prices in the face of a stronger tone elsewhere. The bond market also has displayed, on the whole, a tendency to recover. Foreign exchange is still irregular, but was inclined to ease off on better monetary conditions at London and decreased pressure to obtain gold for New York.

Demand for shoes from eastern manufacturers has been restricted to hand-to-mouth orders for immediate shipment and there is no disposition to order for spring. Curtailment of factory products is reported spreading because of fear of cancellations. Leather is quiet, with high grades firm but lower grades inclined to weakness. Shoe shipments for the week are 12½ per cent. below a year ago, and for the year to date are 5.6 per cent. below 1906.

The markets for wool are quiet, many mills are taking stock, others shut down for the entire week, and sales are light. The London sales show prices 10 per cent. below the last close, and rather lower than expected. Even at the decline, however, London is still above a parity with Boston.

Bank clearings for the week ending November 28 (a holiday period) aggregate $1,730,564,000, 24 per cent. below last week and 32.7 per cent. under this week last year. Outside of New York exchanges amount to $749,276,000, a loss of 29 per cent. from last week and of 20.6 per cent. from the week last year.

Business failures for the week ending November 28 number 256, against 265 last week, 174 in the like week of 1906, 188 in 1905, 184 in 1904 and 239 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending November 28 aggregate 5,459,324 bushels, against 5,103,143 bushels last week, 4,204,917 bushels this week last year and 5,117,478 bushels in 1901. For the first twenty-two weeks of the fiscal year the exports are 90,482,819 bushels, against 78,794,693 bushels in 1906-07 and 127,081,273 bushels in 1901-02. Corn exports for the week are 710,182 bushels, against 560,629 bushels last week and 1,040,970 bushels in 1906. For the fiscal year to date the exports are 20,477,073 bushels, against 18,353,265 bushels in 1906-07.

IN CANADA.

Canadian trade reports are fairly cheerful, despite the continued stringency in money. As regards this latter matter, however, the feeling is that an improvement may be looked for shortly. As regards trade, it is noted that reorder business for winter-wear goods is not as brisk as expected, possibly because the weather has not been cold enough to stimulate demand. Also, it is noted that trade in the northwest and on the Pacific coast is rather quieter. This is probably due to the money stringency affecting the movement of grain to market, but eastern centers report collections from the west rather better than previously. Montreal reports navigation practically closed, groceries moving well, textile prices firm and repeat orders for woolens good. Toronto reports a good trade in holiday specialties at wholesale, an improvement in collections, and dry-goods paper has been well met. At Winnipeg trade is not up to last year, scarcity of money retards grain movement, but the holiday trade outlook is good. In British Columbia there is now an abundance of labor, as mining and lumbering are quiet. Trade, however, is fairly well, and there is little complaint about collections. Failures for the week number 46, as against 35 last week and 25 in this week a year ago. Clearings aggregate $82,832,199, a decrease of 9.8 per cent. from last week and of 6.9 per cent. from this week a year ago.

TRADE REPORTS.

At New York business in dry goods is only of moderate volume. Actual sales from stock have been limited to requirements, and a great many requests for cancellations of orders have been received. Many of these have not been accepted, goods being held for later delivery. Lower prices of wool in Europe tend to reduce prices for the manufactured article, the profit on woolen goods, it is thought, will be small for some time to come, and it is feared that there will be a further reduction in prices. Collections are not bad and are indeed much better than was expected, but money is not coming in when due, and extra time has been allowed to some of the best houses in the country. These requests were anticipated, and in cases where they were granted remittances have been received before the expiration of the time asked for. While the distressing conditions that have prevailed in financial circles have extended to commercial lines, it is thought the depression in dry goods will be quickly followed by a resumption of business and confidence, but during 1908 conservatism will be the policy of most houses in the trade. Cotton yarns continue irregular in price. Demand is light, and cancellations of orders numerous. Woolen and worsted yarns are, however, in brisk demand, and prices are high and firm. Raw silk market is featureless, buying being only spasmodic. Considering present conditions payments in the millinery business have been generally satisfactory, but they have further demoralized the fur trade, and many manufacturers are sacrificing stocks in order to be able to meet maturing obligations. In shirts, gloves, neckwear, etc., there has been a falling off in orders, and in these lines, too, requests for cancellation of orders placed earlier have been asked for. Collections continue slow. Receipts of fresh eggs are light and prices have advanced considerably, but storage eggs dropped 2 cents. Butter declined 2 cents on a dull market. Receipts of turkeys were large, and prices opening at 20 cents dropped to 14 cents to clear the market. The retail grocery trade has been up to the average for the season, but complaints are heard as to payments, in many instances buyers being unable to get cash. The stringency of the money market does not appear to have affected the coal trade, a good volume of business being done. In cordage business is quiet and prices have sagged. Manufacturers are fairly busy, but business with jobbers is not active. In freights and charters business

and demand are lighter than usual. Rates, however, are fairly steady. Leather is quiet, and while manufacturers are not doing very much, it is said collections are good. Prices of hides have fallen, but calf skin is in good demand. Boot and shoe dealers have plenty of stocks on hand, and buying is limited. The hardware and cutlery trades show a considerable falling off in orders. Collections have become more difficult, and the situation is rendered more complex by the refusal of bankers to cash checks given them for collection. Manufacturers of tin and enameled ware are running full time on orders already booked, but new orders are coming in slowly, and it is a question if they will be able to keep their full force employed when they have completed the work on hand. Complaint is heard among manufacturers of difficulty of obtaining cash for pay rolls. Pig iron and copper are both quiet, spelter is lower, and there is little doing in old metals. In the diamond and jewelry trade business is slack. Few sales of real estate have been reported, but a better feeling prevails; money for mortgage loans appears to be plentiful, and a larger number of loans have been made during the week than at any time since the monetary troubles set in and exceed those for the corresponding week of 1906. A very fair business is being transacted in wholesale paper at steady prices, though there is some falling off in sales. Collections are slow, and some former short-time buyers are now taking full time.

The following telegrams show trade conditions at the cities mentioned for the week ending November 29:

BOSTON.— Dry-goods jobbing trade continues more than seasonably quiet, although retail business has continued very fair. Uncertainty still checks transactions beyond present needs. Requests for cancellations of orders with commission houses and jobbers have been numerous, and while, as a rule, the attitude taken by sellers is that of holding buyers to contract terms, exceptions are made and concessions arranged. Cotton goods demand has declined and jobbers' stocks are increasing. To steady the market, mills are curtailing production by shutting down or by running on reduced time. Increasing strength of raw cotton is expected to help in holding values from falling to low levels. Men's-wear worsteds for spring have sold well to both clothing manufacturers and tailors, at prices about the same as a year ago, and there has been few cancellations of orders. Woolen goods, as for a long time past, continue in slow demand. Manufacturers of clothing report the present season only a fair one in business, duplicate orders not having come in as anticipated. The men's furnishing trade at wholesale has continued good, and retailers appear doing satisfactory business. The leather market is extremely quiet. Prices hold good on No. 1 goods, but are wavering and uncertain on less desirable grades. Shoe manufacturers' orders are almost entirely of the hand-to-mouth class for immediate shipment, and the purchases are on the same basis. Curtailment of factory product is spreading, and will probably continue to do so until demand for spring goods becomes imperative. Fear of cancellations and uncertainty as to the trend of the leather market have caused shoe manufacturers to keep their floors bare of surplus supplies, except for immediate use. Shellac is weak and lower, with substantial concessions being obtained from current prices for shipment after January 1. In drugs, demand is limited to jobbing quantities and is only fairly active. In the furniture trade the volume of business for the month is behind last year, and collections continue slow. Lumber continues quiet in all lines owing to shutting down of mills. Anthracite coal is in good demand, while bituminous, owing to mild weather and other causes, is quiet. Retail trade is fair. Metals of all kinds continue dull. Painters' supplies are in fair demand. Wholesale liquor dealers report a satisfactory trade during the past week. All grades of liquors are in reasonable demand and collections are fairly good. Leaf tobacco dealers report only ordinary demand. Cigar makers are quite busy and general conditions are favorable. Confectionery manufacturers are very busy and report good business throughout New England. They are filling holiday orders as fast as possible. Wholesale poultry dealers report a restricted Thanksgiving trade, owing to high prices. The recent move of the packing houses in shortening terms of credit has caused considerable trouble for many retailers, who have been unable to make their own collections.

PROVIDENCE.—Fancy goods are reported fairly active, especially holiday specialties, but in the general retail trade dealers are buying more closely to actual needs than usual. Machinery and tools are quiet and a reduction in hours of labor per week is noted. Collections in general are slow.

PORTLAND, ME.—Conditions in banking circles are improving, and little disposition is shown to hoard money. Shoe factories are running light crews and some other manufacturers are reducing help and output. Retail trade is fairly good, but wholesalers report country trade buying light.

PHILADELPHIA.—Money is easier. Currency is quoted at 1½ to 2 per cent. premium, and demand much lighter. New York exchange is quoted at $2 to $3.50 per thousand, this being mainly based on demand occasioned by settlements for subscriptions to government securities. Commercial paper sold shows an increase, with rates 7½ to 10 per cent. for best names. Banks are renewing customers' paper freely, but not disposed to increase lines. General business is of much lighter volume, orders for future delivery being canceled to some extent, and requests for deferred dates of shipment by other buyers. Collections generally are slow, bills payable being reduced at the expense of open accounts. The effects of the stringency in the money market are probably most pronounced in the iron and steel trade, and caution and curtailment seem to be the order of the day. Some furnaces claim to be sold several months ahead, and it is declared that buyers are clamoring for deliveries. The anthracite coal market is more active, and quotations are firm, with a disposition to still further advance the price on "pea" grades. Wool market continues quiet. The textile trade generally is dull, manufacturers curtailing production and buying nothing that is not imperatively needed. Collections in all lines are more or less affected by the money stringency, and there is a disposition to extend terms when the solvency of the debtor is not questioned. Jobbing dry-goods trade is quiet. The larger retailers report a fair trade. The past season has been a fairly good one for retail dry goods, notions and men's furnishings, but at present the inclination is to buy cautiously. Trade in cloaks and suits has been good, but the season closed early, and manufacturers are only filling duplicate orders. Orders for spring of 1908 suits and shirtwaists are considerably lighter than one year ago, some cancellations of orders have been received and instructions to delay shipments are numerous. Cement manufacturers are overstocked and demand has fallen off. These plants have therefore shut down. Demand is fairly active in china, glassware. etc., the holiday season giving an impetus to buying. Jewelers report sales at this time nearly equal to that of one year ago, although the total year's business may not foot up the same as 1906. Little money is passing, fall purchases being payable January 1. There is at this time absolutely no market in hides and skins, and several houses have recalled salesmen, there being no buyers. Conditions are weak and dull, the anticipated improvement having failed to materialize. The leather market shows less activity, with full supplies and concessions in prices for purchases of moment. Shoe dealers report a falling off in the volume of business. With the advent of seasonable weather an improvement is anticipated. Prices remain unchanged. Flour is firm in sympathy with wheat, and millers are disposed to advance quotations, but jobbers and consumers are buying sparingly in the hope of a decline in the near future. Paints and glass are moving quite freely at firm prices and the market rules steady. Collections are slightly improved. The lumber market is fairly active, but prices are inclined to droop owing to small southern manufacturers unloading in order to realize quickly. This condition, however, is believed only temporary, a permanent reduction in quotations not being looked for as supplies are not over-abundant. Paper remains firm. The cost of raw material for finer grades is somewhat lower, but prices for the product are unchanged. Some mills have materially increased their plants in order to keep pace with the demand, which in some lines exceeds the supply. White or print paper consumers complain of the radical increase of prices, and some daily newspapers contemplate an increase of 1 or 2 cents. Collections are fair to poor, a tendency to defer payments being manifested. Tobacco sales are small. Manufacturers of cigars are using up closely stock previously purchased. There is some shading of prices on sumatra as well as domestic goods, probably more on Pennsylvania than others, and principally by smaller dealers. Liquor distillers are not pushing sales, withdrawals from bond are small, as few have, or can get, cash to make purchases. Some weak holders are shading prices to realize, but on goods from other localities, and this has a tendency to soften prices, making sales by any one harder.

PITTSBURGH.—The iron and steel market has assumed a waiting character. Except that there has been a still further curtailment of production by both furnaces and mills, conditions remain the same as last week. There has been a suspension of new business all around, and cancellations on existing contracts continue numerous. No sales of pig iron are reported, and present quotations are nominal. Coke is in the same position, there being no new business coming forward, and curtailment of output is in progress. A hopeful feeling, however, prevails, and with an improvement in financial conditions it is thought business will assume fair proportions in the not distant future. Present quotations for pig iron for immediate delivery at valley furnaces are nominally as follows: Standard Bessemer, $20; chilled basic, $19; gray forge, $19, and No. 2 foundry, $19. Standard Connellsville furnace coke is quoted at $2.50, and foundry coke at $3.25 to $3.50, at the ovens.

BUFFALO.—Trade is fairly active, but collections are slow in most lines, and money is tight. Since a week ago, some of the manufacturers who were shut down have opened their plants, while others continue running on short time,

BALTIMORE.—The banks are extending every aid to their customers for the legitimate requirements of their business and freely renewing their paper, thus maintaining the reputation heretofore enjoyed by Baltimore firms for promptness in meeting their obligations. While payments on open accounts have been somewhat tardy, there seems to be no uneasiness expressed relative to the general standing of the business community. There is felt a growing tendency to improvement, and, while quiet is noted in all lines—a fair volume of holiday trade excepted—it is believed that with the easing of the currency situation a healthy improvement will occur. Canned goods are weaker than last week. Flour is quiet, mills not making offers as formerly and don't appear anxious to sell, but collections are slow. Spirits are active and collections are fair. Turpentine is firm and about steady. Oils are steady, with demand quiet. Ohio tobacco is quiet. Seed leaf is getting dull, but collections are fair. Maryland leaf arrivals are larger than last week, containing a large proportion of old crop. The latter, when of good quality, sells readily. Sumatra leaf is plentiful, with demand fair. Old Havana tobacco is scarce, with receipts sufficient to supply demand. Trading in harness is of fair volume, manufacturers being well employed on old business, and new business very limited. Some weakening in raw material is apparent, but the decline is light; collections are slow. While collections with brush manufacturers are still under normal, they are considered satisfactory in view of general trade conditions. Factories are working the usual force, with ample orders on hand, but new business is not up to expectations. With manufacturers of fertilizers this is between seasons. Contracts are being made for next season in rather liberal amounts in view of a weakening in prices of raw material. Woodenware manufacturers report a moderate volume of business for the week, confined mainly to nearby points, and distant business being quiet. General collections are slow.

CINCINNATI. — General trade has shown some improvement, largely along the lines of cheap and medium priced holiday goods. Factories are arranging to reopen after the holidays. Banks report a better feeling in checking and express the belief that within a week banks will begin to replace Clearing House checks with currency. Banks are now issuing little, if any, additional Clearing House checks other than those already circulated. Very little discounting is being done, and rates of interest are a matter of barter largely in each particular case. Eight per cent. interest is said to have been paid in some cases.

CHICAGO. — Financial conditions are steadily improving. The banks are paying out and loaning more money. Most of the Chicago banks are prepared to resume on a currency basis and are only awaiting the action of others. Gold receipts by local banks aggregate over $8,000,000. Scrip issues to date are $7,000,000. Over 33 per cent. of the notices of withdrawal of savings deposits that were given thirty days ago have been canceled. One of the largest savings banks sent out 1,000 notices to those asking for withdrawals of funds under the thirty and sixty day rule, but thus far very few calls for the money have been received. In fact, within the past two days savings deposits have increased 25 per cent. Local and western banks that have large holdings of paper have extended over 60 per cent. of it for three to six months on the showing being made that the falling off in business has made it impossible for creditors to meet their obligations unless leniency is shown. A southwestern bank that was over-extended has been helped out by a local and eastern syndicate to the extent of over $400,000. The disposition is to assist merchants and manufacturers who are solvent though short of money. New York exchange is $1 premium. A better feeling without a material enlargement in sales is noticeable in wholesale trade, but orders are for small lots. Cancellations continue to a fair extent. Retail trade is fair, all things considered. While prices are easy, there is little pressure to sell, as such action would necessitate material reductions. Railroads and steel interests continue to reduce their forces, and over 15,000 men have been laid off. New buying of, as well as specifications for, iron and steel continue light, and the failure of the latter to materalize is curtailing operations of the steel mills. The largest mills are refusing to accept cancellations of orders. Weakness prevails in prices, but no material shading is noted on finished products, although buyers have the advantage of dictating terms to a greater extent. Lighter buying of coal is noticeable and cars and labor are abundant. Trading in lumber is down to a minimum both on local and interior account, and building operations have largely decreased. Stocks are larger than the average and prices are shaded to make sales. Salesmen are in from the road and there is little effort being made to do business. Buying of groceries is confined to actual necessities. Produce business is fair, with easier prices on most lines, especially poultry. Fresh meats are also lower. Live stock has declined heavily. Hogs are selling at the lowest price since 1900, touching $3.75 the 100 pounds. A partial reaction from the extreme decline has come as receipts decreased. Net arrivals of cattle and sheep increased. The grain movement is below the average. Collections are slow.

PEORIA.—Trade is quiet in all lines and collections are slow. Banks are still issuing cashiers' checks, but in financial circles it is thought thnt money matters will soon be in a normal condition. Prospects for holiday trade are only fair.

LOUISVILLE.—Business in all retail, wholesale and manufacturing lines continues dull. The street-car strike, which ended Wednesday, hurt retail trade considerably, although practically all the lines were running during the day. Wholesale houses report business dull and collections still very slow. Banks report financial conditions brighter and believe the stringency in money matters will before long be over.

ST. LOUIS.—General conditions throughout this section and the southwest are somewhat improved. Railroads report handling more cotton. The jobbing trade reports better collections and a better feeling. Orders are being placed freely for future deliveries, but there is little or no improvement in orders for immediate shipment. Lumber is extremely dull and prices are very much lower than they were a few months ago. A large number of saw mills, especially in the yellow pine district, have closed down indefinitely. Building material is moving very slowly and there is little demand for it. The banking situation has materially improved, either on account of more currency or the fact that people are becoming accustomed to credit instruments. Nevertheless, there is a feeling that we must necessarily have some liquidation in stocks and securities of all kinds. New York exchange is quoted from $4 to $5 premium. Banks are loaning small amounts of money at from 6 to 8 per cent. Some currency is being shipped to interior points for the purpose of handling crops.

KANSAS CITY.—A better feeling is noticeable in jobbing circles, the cancellations of orders have not been large. Some orders have been held up, but there is evidence that request for shipment will soon follow. The volume of trade is fully up to expectations in most lines. Groceries and provisions are active. Retail trade shows a slight falling off, but demand for seasonable merchandise is good. Collections are only fair. There is an improvement in financial circles. Banks, however, are maintaining a conservative policy in making loans.

MILWAUKEE.—The volume and tone of trade are satisfactory and improving under the influence of the approaching holidays. Collections are still

hampered but are becoming better. The money market is improving, and currency payments are expected to resume shortly.

SIOUX CITY.—Jobbers in all lines still report a falling off in business. Retail trade is below normal, owing partly to warm weather. Banks still refuse to make large cash payments. Grain and live stock receipts are far below the normal.

DAVENPORT.—Merchants report business gradually growing smaller in volume, with collections slow. Manufacturers continue to reduce their forces. It is the general opinion that conditions will gradually grow worse until such a time as the banks resume cash payments. The weather is warm for this season, and this affects business in some lines.

ST. PAUL.—Trade conditions are encouraging, and a hopeful feeling prevails. Salesmen are getting more business than last year. There have been some cancellations, occasioned by personal feeling rather than a lack of demand for the goods, and hurry-up orders are looked for to renew sales. Money has come in better than any one looked for under the circumstances. As much has been received as last November. The increased volume of business outstanding is about 25 per cent. greater than last year. Collections have fallen off to that extent. The resumption of currency circulation is looked for soon, the banks being prepared for the occasion, but New York must give the word.

MINNEAPOLIS.—Wheat is moving much more freely than for three weeks past, and receipts at centers are becoming more nearly normal. Improvement is noted in country collections, and jobbers report satisfactory orders for immediate shipment. Orders for future delivery are not yet coming in freely, marked conservatism being noted in that direction. Flour manufacturers report sales improving, and production is increasing.

OMAHA.—Jobbers report improvement in trade. Exceptionally mild weather retards retail trade. Grain is moving more freely. Live stock business is quiet, with prices tending downward. Local banks are well supplied with currency and are becoming more liberal in meeting demands for cash. Collections are only fair.

LINCOLN. While trade and collections are somewhat below the corresponding period in 1906, conditions on the whole are fairly satisfactory and are believed to be improving.

CHARLESTON.—Wholesale trade continues quiet in all lines. Money is exceedingly scarce. Several banks are demanding ninety days' notice of withdrawals of savings deposits. Merchants threaten to hold cotton. Collections are slow.

SAVANNAH. — Collections are still bad, though the currency situation is easier.

AUGUSTA. — Little improvement is shown in trade. Collections are dull.

ATLANTA.—Retail trade is stimulated by cut prices. Collections have materially improved, although extensions are being freely asked and generally granted. Cotton is still being held for higher prices. Manufacturers report curtailment of orders and numerous cancellations. A more optimistic view is being taken of the financial situation, although banks still adhere to extreme conservatism in making advances.

MOBILE.—Business in all lines is exceedingly quiet. Collections have improved but little. An excessive rainfall has damaged unpicked cotton considerably. The local financial situation is somewhat improved.

MONTGOMERY.—Trade is very quiet, all lines of wholesale and retail showing a decrease. Manufacturers and wholesalers in some instances have decreased their working forces. Banks continue to issue Clearing House certificates. Collections are very poor.

CHATTANOOGA.—Local houses do not appear to have suffered greatly by the recent scarcity of money. In all lines confidence is expressed. Manufacturers remain quiet and forces are temporarily reduced, but it is the general impression that the present situation will be of short duration, and business will resume its normal condition by spring. Building is still active. Weather conditions are good. Collections continue unsatisfactory.

MEMPHIS —Trade, wholesale and retail, is quiet. Collections are slow. Merchants are gradually readjusting affairs to meet new conditions.

LITTLE ROCK.—Retail business continues to improve, and a fairly good holiday trade is anticipated. Cotton is moving more freely, which is helping collections.

NEW ORLEANS.—Retail trade is fair. Jobbers are receiving some filling-in orders, but otherwise trade is dull. Collections are poor. Sugar making is going on fairly, but the fields are heavy on account of the recent excessive rainfall. Rice shocked in the field has been considerably damaged. Cotton picking is nearly finished in this section.

WACO.—Trade conditions show no improvement. Collections are very slow. Financial conditions seem easier and confidence is being restored. Some little cotton is being marketed.

SAN FRANCISCO.—Conditions show a slight improvement. Remedial legislation has been passed, and good results are anticipated. Money is a little easier.

SEATTLE. — While business has fallen off collections have improved, and money seems a little easier. Banks have not resumed their usual loaning policy. The stringency has severely inconvenienced larger houses in meeting fall obligations.

SPOKANE.—Cold, rainy weather has helped the dry-goods business. Wholesale business is fair to good. Collections are coming in. Wheat is beginning to move.

TACOMA.—Business is assuming a more normal condition, and a better feeling prevails. Collections are only fair. Preliminary work has been started on the Union Pacific tunnel.

PORTLAND, ORE.—Wholesale trade in mostly every line shows a marked decrease and collections are only fair. Wheat is beginning to move again from the interior and exports are heavy. Retail trade shows some improvement over last week.

TORONTO.—Tight money continues the dominent influence in trade here. Some comfort, however, may be taken from the fact that bankers now speak rather more confidently of the immediate outlook. It is to be expected that money will continue tight for some time, but it appears there are signs of slight improvement. Wholesale trade is moving briskly, and an excellent trade in holiday goods is going forward. The weather has favored an excellent clearing up of fall lines in retailers' hands. Reorders for heavy lines are fair, but await cold weather to be really brisk. Deliveries of textiles are still slow. Cotton prices hold up well, despite lower prices elsewhere. The demand for cotton prints is heavy and mills are well oversold. There is an excellent tone to the trade in groceries. Demand for staple lines is heavy from all parts of the country and holiday goods are moving well. Some trouble has been caused by the delay in the arrival of dried fruits. Values are steady to firm. Farmers are now well through fall plowing, and country retail trade is showing a better tone. There has been improvement in collections during the past week or so. Dry-goods men report that paper was surprisingly well met early this month, and that, too, from the west, where payments have been very slow for some time. There continues an excellent business in furs and in all lines of ready-made clothing. Receipts of produce are light and prices firm. Hides are quiet and unchanged. Tallow is scarce and high in comparison with other markets. Wool is dull, and demand for provisions is quiet.

MONTREAL.—The main activity here is in preparation for holiday trade, which in some lines has already opened out. Prospects are bright for an excellent business. Sorting orders for fall and winter lines have been fairly good, although there has been but a moderate demand for winter goods owing to the non-arrival of really cold weather. Navigation at this port has practically closed. Shipments of goods are much lighter. The wholesale dry goods trade is reported active. Owing to the indications of further advances in many lines of textiles, the buying for retail account has been heavy. Repeat orders for all lines of woolens have been heavy. The business in Christmas novelties has been large. Values generally hold firm. Staple and holiday lines of groceries are moving well. Collections are generally fair, with some improvement noted from districts about which there has long been complaint. The scarcity of money continues a trouble, although bankers are already talking of slight improvement in this regard. Country produce is slow in coming forward and prices are firm. Butter and cheese prices are steady to firm. Butter cannot go any higher without laying the market open to importations from abroad. The hide market is weak and prices are expected to drop. Farmers complain of lack of feed. Receipts of cattle of poor to medium grade are heavy and prices easy.

VANCOUVER-VICTORIA.—Reports say trade conditions along the coast are not so good as they were a month or even a fortnight ago. The main factor in this is the oversupply of labor, which has been brought about by different causes. The reductions in metal prices have acted against the mining trade, and the lumber trade is quiet owing to the lull in building operations in other parts of Canada. In the meantime wholesale and retail trade is moving fairly well and there has been little complaint about collections. The scarcity of money is also affecting general conditions.

WINNIPEG.—In some lines business is brisk, but taken as a whole the volume is hardly up to that of last year. Country trade is improving, as farmers are finishing up their fall plowing, and wholesale business is expected to show more activity. Collections are in most cases fair. Grain prices still hold high, but scarcity of money has retarded the crop movement. Elevator companies also have been conservative in their buying, owing to the uncertainty of the market. The outlook for holiday trade continues bright.

FINANCIAL.

Money Market.

Not only has sentiment in connection with the financial situation improved during the week, but the New York loan market has exhibited an appreciable lessening of tension under which it has been laboring. The lowering of the premium for currency from 2 per cent. early in the week to ½@¾ of 1 per cent., and the increased readiness of banks to furnish cash to depositors for pay rolls and other legitimate purposes, was naturally hailed as a favorable symptom, and much satisfaction was caused by statements on the part of bankers that the full restoration of cash payments by the banks was to take place in a fortnight or less can be relied on. The conferences at Washington at the end of last week between the President and the Secretary of the Treasury and representative bankers, though not productive of immediate results, had a good effect, which was also true of the announcement on Wednesday that no further tenders for the 3 per cent. Treasury notes will be received, the inference being that the administration has limited their issue as far as is now practicable. The gold engagements in London this week amounted to $7,250,000, making a total of $94,250,000, of which $59,880,000 has been received, but London apparently believes that the movement is ending, and there was a decided improvement in the London money market, and the Bank of England rate was left unchanged. These various factors, together with the indications that the monetary strain at interior points was lessening, were reflected by a relaxation of loaning rates in New York, the quotation for call money receding from 10 per cent. to 6 per cent., at which latter figure renewals were made on Wednesday. Time money is still scarce, but the offerings were a little better, though 15@12 per cent. was asked for sixty to ninety day arrangements, those being about the only periods for which there was any inquiry. Commercial paper remains practically stagnant, only very small scattered amounts being taken, in spite of the fact that the nominal rates are 10@8 per cent.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending November 28 shows an aggregate of $1,730,564,000, as against $2,285,928,000 last week and $2,575,095,000 in the corresponding week last year. Canadian clearings for the week aggregate $82,832,000, as against $91,848,000 last week and $88,988,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	November 28	Inc.	Dec.	November 21
New York	$981,288,000	....	39.7	$1,316,177,000
Chicago	153,285,000	....	18.9	197,626,000

† Not included in totals because containing other items than clearings. § Not included in totals because comparisons are incomplete. * Last week's.

New York Banks.

Last Saturday's New York Clearing House statement was regarded as satisfactory. In fact, it was held by Wall street to represent a gradual return to normal conditions. The decrease in the cash item of $2,807,900 was less than half the estimated actual loss of money through shipments to the interior and the return of government deposits, so that there was room for the deduction that a considerable amount of hoarded currency had come back to the banks. The decrease of $4,012,000 in loans was also looked upon as an encouraging feature. The decrease of $9,485,000 in deposits was not in agreement with the changes in the two first mentioned items, this being, however, the result of the system of averages. It, however, reduced the reserve requirements by $2,371,250, so that the surplus reserve deficit decreased $436,650, making the deficit $54,103,600. Omitting the government deposits, the deficit was reduced $1,400,875, the total figures being $36,986,250. The statement compares as follows with that of the preceding week:

	Nov. 23	*Nov.* 16	*Changes*
Loans	$1,187,998,400	$1,192,010,400	D. $4,012,000

Foreign Exchange.

During the past week the foreign exchange market at New York has tended toward a return to normal conditions. The inquiry for cable transfers in connection with gold-importing arrangements was less pressing, and that class of exchange eased off from 4.89½ to 4.88½, while demand sterling, though irregular in its movements, inclined toward a lower level. Another feature was the reappearance of a market for long sterling bills, which have been higher in consequence. There was also a fairly liberal offering of commercial bills. In addition to the effects of the better condition of the New York money market, foreign exchange was also affected by the corresponding improvement at London, where open market discount rates declined sharply on the practical certainty that no further raising of the Bank of England rate would be necessary, and the general belief that the drain of gold to this country was nearing an end. The gold engagements actually made in London this week were to the amount of $7,250,000, raising the aggregate from the beginning of the movement to $94,250,000, of which $59,880,000 has been received.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.80; commercial bills, 4.78½@4.78¾; francs, 5.23¾ less 1-32@5.18¾ less 1-32; reichsmarks, 94⅜@94⅜ less 1-32.

The Bank of England's rate is unchanged at 7 per cent. Its weekly statement on Thursday showed a gain of £1,759,222, while the proportion of reserve to liability increased from 38.78 per cent. to 42.83 per cent. In the London open market on Friday call money was 4½@5 per cent., and discount 6@6¼ per cent. The Bank of France this week reported a decrease of 8,825,000 francs in gold. Its rate remains at 3½ per cent.

Imports for October decreased $6,313,366, and exports fell $6,932,815. For the year to date importations increased $153,601,889, and exports increased about $86,821,457. The following table presents an outline of our foreign trade in October:

IMPORTS.

	1907	1906
Foodstuffs, crude, and food animals	$13,469,911	$13,433,418

Total	180,420,533	187,353,348

New York Securities Market.

While stock market transactions are of restricted volume, there has been an improvement in tone, with moderate but general advance in prices. In fact, the developments gave rise to a more or less pronounced feeling that Wall street is reversing the process which was witnessed in the week ending October 26, when the demoralization in the share list foreshadowed the breaking of the financial storm. The present tendencies, it is argued, are based upon a proximate return to normal conditions in connection with money and domestic exchanges throughout the country. The various developments which could be construed as indicating restoration of confidence are detailed elsewhere, but the factor which may be deemed to have most directly influenced sentiment and action of the stock market was the decreased strain in the loan market, the recession of the call money rate at New York to 6 per cent., and the hope thus aroused that funds will soon be obtainable in liberal proportions and at rates which are not prohibitory to buying of stocks. It cannot be said that there is a disposition as yet to encourage speculative purchasing on a large scale. Banking authorities would doubtless promptly check any decided tendencies of that kind by withholding the needed financial accommodation. On the other hand, the extensive short interest has been plainly covering its contracts, and the repurchasing of holdings which were sold out in order to lighten brokerage houses of their loads has been an influential factor in determining the market's course. The improvement, it is true, has afforded room for considerable further supplementary liquidation of accounts and loans which it would have been impracticable to dispose of heretofore, but such offerings were not sufficient in volume to create more than temporary irregularity, and as an effect there has been a continuance of buying by investors, particularly of "broken lots" or small amounts of stock for cash, a process which has already resulted in an unprecedented increase in the numbers of the stockholders of many of the dividend-paying railroad and industrial companies. The improvement in the position in London was also not without an effect, and for the first time moderate buying from that quarter has been observed.

As already mentioned, there has been no lack of irregularity. In fact, the market is still sensitive to the varying developments. Last Monday, for instance, reactionary tendencies reasserted themselves for the greater part of the day, due to renewed liquidation and to disappointment that the conference in Washington at the end of last week between the President and Messrs. J. P. Morgan and George F. Baker had not resulted in any specially favorable developments such as the street had assumed would follow, and had proceeded to discount on Saturday by a general advance in prices. There have also been weak spots in the market, notably the Gould group, headed by Missouri Pacific, which reached its lowest price—44½—in the face of the strength elsewhere, and falling to 54½. There was likewise pressure in connection with Pennsylvania and New York Central, the latter being still the object of unfavorable talk as to its financial position and capital requirements. On the other hand, a variety of favorite trading stocks developed strength, especially on Wednesday and Thursday, Reading, Union Pacific, the Hill group and Amalgamated Copper being prominent in the trading. In the case of the last named issue, a reported improvement in the copper market situation was the reason assigned. The United States Steel issues have been irregular, and it is claimed that there was renewed selling by western interests. In the bond list one of the chief features was the recovery in the Rock Island collateral trust 4s, which rose to 60 on large transactions.

Boston Stock Market.

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*Nov. 22, 1907*	*Nov. 15, 1907*	*Nov. 23, 1906*
American	2,928,360	2,737,485	3,260,336
Other kinds	798,876	785,876	776,000
Total	3,727,236	3,523,361	4,036,336

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Nov. 22, 1907	*Nov. 15, 1907*	*Nov. 23, 1906*
Great Britain and continent	2,027,000	1,900,000	1,859,000
Egypt	167,000	150,000	171,000
India	285,000	297,000	322,000
United States	1,248,000	1,176,000	1,684,000
Total	3,727,000	3,523,000	4,036,000

Boston Shoe and Leather Market.

Leather dealers report the market extremely quiet. Prices on No. 1 stock in both upper and sole leather hold firm in spite of conditions. No. 2 stock has weakened and lower grades are practically unsalable at any price just at present. Shoe manufacturers find orders small and mostly for goods wanted immediately. Shipments are holding their own, but are over 12½ per cent. behind those of the same week of 1906. This is naturally a between-seasons period, but most manufacturers ordinarily have enough orders on hand at this time to start their shops on full time. At present production has been curtailed to immediate shipments, and very little is being done on orders for shipment after January 1, 1908, for fear of cancellations. The *Shoe and Leather Reporter's* statistics this week are as follows: Last week, 85,146 cases; preceding week, 85,503; last year, 97,235; total for 1907, 4,390,360; total for 1906, 4,654,475; decrease, 264,115.

Wool Markets.

The market has been extremely quiet during the past week, mainly on account of the holiday, and many of the mills have taken advantage of this to take stock, while several have shut down entirely for the whole week. The volume of sales, therefore, was less than for the previous week, and was not heavy enough to have any effect upon prices, which are being well maintained on the level established two weeks ago. The only news of interest was the opening of the London sales on Tuesday, when all grades were 10 per cent. lower — a little lower than was expected. The offerings were smaller than anticipated, owing to delayed shipments. This decline in London, following the decline in the Australian markets on the withdrawal of orders, owing to financial conditions, will probably have little effect upon the local market, as even at the decline London is not on a parity with the Boston market. For this reason, therefore, American dealers are strengthened in their position by the removal of fear of foreign competition. Purchases for America in Australia this year were less than one-quarter of last year's total, and while several American buyers are attending the London sales, it is not expected that they will purchase very heavily. There is absolutely no speculative buying, the mills only taking small lots for immediate shipment, and current prices are being paid without question. Staple wools are in very short supply, and the bulk of the stocks are of clothing grades, the trading of the past week being mostly clothing territories, fall Texas and clothing fleeces. The fall Texas wools are being for the most part consigned to Boston dealers, though the San Angelo and Kerrville wools are still in the country, where little is being done. There will probably be little done in California wools until after the first of the year, but the new California wools are arriving, baled and scoured, and are selling in a small way at 50@52 cents for choice, 45 cents for average, and 34@35 cents for defective.

NEW YORK—THE GREATEST PORT IN THE WORLD.

A writer in the *Broadway Magazine* describes the port of New York in these words: "Kurd and Polack and Lett and Hun, Wallachian gypsies in their red sashes, strange people babbling a hundred languages; cargoes of spice from the Indies, sugar and coffee and ivory from the hot, lazy ports to the south, teas from China, milk from Denmark, rugs and drugs and silks from Singapore, fully one hundred million dollars worth of merchandise a month—all cast in heterogeneous confusion and tumult by a thousand ships into that hungry, eager mouth, the port of New York! Warships, heavy with menace, steam slowly up the Narrows; visitors from Russia, Germany, France, from the yellow Eastern seas; ferryboats splashing their smooth way across river and harbor; tugs plying crisscross like clucking, crazy hens in the choppy waters; a string of freight cars, ten strings, fifty strings, go floating by; a big liner, black with travelers, docks at its North river pier; oyster boats bob in the Gansevoort market basin; Massachusetts fishermen in the East river cluster about the Fulton street slip; coastwise steamers back away from their moorings and float outward; there, on the Brooklyn shore, the greatest warehouses in the world welcome the commercial booty of the earth—thirty million tons of it a year!

"And wheat from the great western prairies moves through the Narrows to supply the whole world with energy, and cattle by the tens of thousands and provisions by the tons! Oil from the Texas and Kansas fields, bound for London and Amsterdam; machinery for digging ditches in Arabia and Panama; typewriters for Persia; phonographs for the idle lords of Mozambique; cash registers for the Boers; threshing machines for Cape Town. Here is the sallyport of the American invasion!

"For this, the port of New York, is the greatest in the world. More than twice as many vessels clear the port of London, to be sure—one every fourteen minutes, as against one every half hour for New York—but the average cargo value is only $47,242, whereas that of New York is $92,307. In point of tonnage New York exceeds London by one million. This is due to a difference in the character of the ports that must be borne in mind in comparing them. London is England's one commercial centre, and aside from Liverpool its only great place of export and import. It has, too, practically a monopoly on the coastwise trade of the kingdom, for practically all manufactured articles come to London either for export or for distribution to other parts of the kingdom. Cotton goods are shipped by water from Birmingham to London; from London they are shipped by water to other parts of England, Ireland and Scotland, or to foreign ports.

"On the other hand, New York is not the commercial center of America. When the manufacturer of shoes in Boston sends his goods to Baltimore he either sends them by rail or by vessel direct, without entering New York. If he wants to send his goods to France or Germany he sends them from the port of Boston. That is, the chief ports of the Alantic seacoast, New Orleans, Charleston, Mobile, Norfolk, Philadelphia and Boston, engage a coastwise and foreign trade in entire independence of New York. Less than 28 per cent. of New York's tonnage is represented in coastwise trade, whereas fully 50 per cent. of London's is coastwise. In other words, of London's commerce, amounting to $1,370,000,000 annually, only $685,000,000 represents foreign trade, whereas of New York's $1,200,000,000 annual commerce $864,000,000 represents foreign trade, or an actual excess over London of $179,000,000.

"To accommodate this enormous trade New York has 404 miles of improved water frontage; that is, 404 miles of docks. This is half the distance between New York and Chicago. London has less than 200 miles of similar water frontage; Liverpool has less than 100 miles, while Hamburg,

Antwerp, Rotterdam and Havre have each less than Liverpool. Practically all the available water frontage of these foreign ports has been absorbed by their docks, while New York has improved only a little more than one-half of its available shore line."

DECLINE OF OCEAN FREIGHT RATES.

The causes of the marked decline in ocean freight rates during the last thirty years are explained in Bulletin No 67 of the Bureau of Statistics of the Department of Agriculture, prepared by Frank Andrews, Assistant Chief of the Division of Foreign Markets, entitled, "Ocean Freight Rates and the Conditions Affecting Them,"

Instances of great reductions in ocean freight rates are noted in the case of grain, provisions and cotton. In 1876 wheat was carried from New York to Liverpool for an average of 16.8 cents (gold) per bushel, and the rate in 1906 averaged only 3 cents per bushel. On salt beef the mean rate from New York to Liverpool by steamers was $1.42 per tierce in 1876, while in 1906 it was but 54 cents. The average ocean rate charged thirty years ago on wheat from San Francisco to England was more than double the present rate. Reductions in the case of cotton rates were also large, amounting in twenty years to more than 50 per cent. in a number of instances.

The causes of reductions in ocean freights are largely connected with the increase in size of ocean vessels and with economies in the handling of ships and their cargoes. Ocean vessels may be divided into two classes, liners and tramps. The first consists of ships belonging to a regular line—that is, a group of vessels plying over the same route, voyage after voyage, and having more or less regular times of sailing. Vessels of the second class, commonly called "tramps," have no regular routes or times of sailing, but go from port to port seeking cargoes, usually for a single voyage at a time. Both liners and tramps are now built much larger than in former years. The cargo of a tramp ship not infrequently includes the product of 15,000 acres of average wheat land or the cotton yielded by twice that area, and it would take two such cargoes to fill the hold of one of the larger freight liners.

The cost of operating a ship does not usually increase in proportion to its size, while the earning power does increase with every additional unit of cargo space. The vessel of 10,000 tons dead weight capacity does not necessarily have twice the operating expenses of a vessel of 5,000 tons, but the earning power of the larger vessel may be double that of the former. The big ship may reduce rates by 25 per cent. and still earn a larger percentage of profit than its smaller competitor. This applies especially to vessels of similar construction engaged in similar traffic.

In the competition of passenger liners with tramps the large ships of the former class are able to secure cargo at rates far below what the tramps can accept with profit. The tramp ship, on account of its slower speed, requires but a small part of the coal used by the fast passenger liner, and hence spends much less for fuel and for wages in the engine room than does the liner. But the earnings from passenger traffic and from mail contracts, as well as from its greater cargo capacity, help to give the liner the advantage.

While the direct interest of the producer or consumer may be in the rate of freight he pays rather than in carrier's cost of performing the service, the latter cost and the elements of which it is composed determine the lowest level of the rates for any considerable period of time. The rates prevailing at any one time are largely influenced by the demand for and supply of ships and cargoes.

Changes are taking place in the construction of sailing vessels as well as steamships. The former are not only built larger than in past years, but their sails are so altered as to require fewer seamen to operate them, and besides manual labor is being supplanted by machinery for handling sails, anchors and cargo. However, in spite of the progress of economy in building and operating sailing vessels, they are being crowded out by steamers. The capacity of all sailing vessels, both home and foreign, carrying the exports and imports of the United States, has declined 50 per cent. in thirty years. Prior to 1881 the capacity of sailing vessels in this trade exceeded that of steamships, but in 1906 the tonnage of steamships was nearly eleven times that of sailing vessels.

Good harbors and low ocean freight rates are closely connected, since large ships are usually able to accept less for a given quantity of freight than are small ones, and large ships can float only in deep water. One of the chief benefits of deepening a harbor and its approaches is to make the port accessible for larger ships. Vessels are being built larger and larger as time goes on, and the ports which are to accommodate the traffic of the leading steamship lines will be ports having deep water in their harbors and in the channels leading to them.

HIGHER COST OF LIVING IN GERMANY.

Consul H. L. Spahr, of Breslau, reports that the Association of Prussian Office Holders has published statistics showing the increase in the prices of family necessaries in that German city in 1906 as compared with 1896, from which publication the consul has compiled the following table:

	Increase, p. ct.
Men's wear—	
Hats and footwear	10 to 15
Underwear—Linen	33.3
Cotton	20 to 25
Woolen	16.7 to 21.4
Outerwear—Suits	20
Overcoats	25
Woolen in general	60
Cravats, umbrellas and gloves	10 to 28
Footwear	10 to 15
Women's wear—	
Hats	30
Underwear—Linen	33.3
Cotton	20 to 25
Woolen	28
Outerwear—Woolen in general	60.3
Ready-made clothing	50
Footwear	10 to 15
Umbrellas and gloves	25 to 28
Children's wear—	
Hats	10 to 25
Underwear—Linen	33.3
Cotton	20 to 25
Woolen	16 to 28
Outerwear—Suits	20 to 50
Overcoats	20 to 35
Woolen in general	60.3
Footwear	10 to 15
Cravats, umbrellas and gloves	10 to 28
Food and drink—	
Butter	13 to 36
Eggs	28
Potatoes	22
Meal and beer in bottles	10
Fruit	14
Beans	43
Peas and rolls	27
Lentils	85
Rice	16
Grits	11
Oatmeal	21
Millet	45
Zwieback	17
Herrings and onions	20
Pepper	53
Bread and meat	10 to 20
Miscellaneous—	
Coal, summer and winter prices	15 3 to 22.2
Briquets, summer and winter prices	12.5 to 17.7
Kindling wood	21.4
Kitchen utensils, iron and wooden	15 to 20
Bedsteads, mattresses, wardrobes, tables, chairs, etc	15 to 20
Hair cut and shave	50
School tuition	20 to 20.4
Schoolbooks, through withdrawal of rebate	5 to 10
Workmen's wages	50 to 66.7
Workwomen's wages	50
Servants' wages	25
Charwomen's and washerwomen's wages	33.3
Soap	60

In addition to the foregoing, noteworthy increases are visible for doctors' fees, medicines, church and other taxes, ecclesiastical services, cost of burials, care of graves, etc. The principal cause of all this, in the opinion of the association, is the strong and rapid advance of wages in all branches of trade. Employers naturally raise their prices to meet the higher wages and dearer raw materials in order to prevent curtailment of profits. The salaried man, however, whose income does not keep pace with the advance, finds it necessary to alter his mode of living or run into debt.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, DECEMBER 7, 1907.

As is natural, Secretary Cortelyou, in his first report as the head of the Treasury Department, gives prominence to considerations arising out of the condition through which the country has recently passed. He brings into relief the fact that while he is given wide discretion in many matters wherein he is rarely called upon to exercise it, he is given little, if any, in others where it is needed daily, particularly as to certain of those having to do with the vitally important subject of the currency. In times of emergency, he says, his hands are virtually tied, and if at such periods he is obliged to resort to unusual methods in an endeavor to avert calamity, criticism is in many instances directed not to the inadequacy of the system, but solely to the effort to give relief, even though it be successful. The Secretary refers to the need for a substantial and permanent improvement in the country's monetary system. If no action is thought advisable at this time fully to meet the need, he deems it important at least that something be done as speedily as may be consistent with thorough consideration to provide, under government guaranty, a greater elasticity in the currency—something which shall be automatic in its operation, and which shall tend to equalize rates of interest not only in different sections of the country, but also at different periods of the year. No specific recommendation is made by the Secretary beyond the suggestion that the matter be given prompt attention, and that it be not laid aside until some definite means of relief shall have been enacted into law.

One suggestion regarding the regulation of reserves is thrown out by the Secretary in a tentative way which seems deserving of attention. He says that it might be regarded as worth while to consider the effect of amending the laws so that the country might be divided into geographical or commercial sections, with provision for the retention within each section of a larger proportion of the bank reserves required to be held against deposits in the national banks of such section. The result of this, he explains, would be, under present conditions, that the banks in the three central reserve cities would lose a considerable amount, which would be transferred to banks in the reserve cities located in the different sections and would necessarily be held by them as cash. This addition to the available and actual cash in banks outside of the central reserve cities would, the Secretary urges, constitute an element of strength which in times of stress might materially aid in diminishing the violence of financial disturbances. Such a provision of law would not, he adds, affect in any way the depositing by national banks of their unemployed capital outside of their reserves, wherever they could best use it. The matter touched upon here by the Secretary should under a properly flexible system be one of administration, though of course, as things are, legislation of a permissive kind would be necessary to render such administration possible or at any rate effective.

It is pointed out by the Secretary that the last fiscal year was by far the greatest in the customs history of the country. The total value of imports of merchandise during the year was $1,434,421,425, an increase of more than $200,000,000 over the preceding year, and the customs duties collected amounted to $333,230,126, an increase of $33,000,000 in round numbers over the year before. Mr. Cortelyou suggests that there is need of legislation that will give to the Secretary of the Treasury such power as will enable him to remedy mistakes made by importers whose transactions are in good faith, and who have no intent to evade the law or defraud the revenue. The Secretary of the Treasury, it is suggested, should be authorized to remit additional duties when in his opinion an unintentional error has been committed. The receipts of the government from all sources for the last fiscal year amounted to $846,725,339.62, while the total expenditures amounted to $762,488,753.32, or excluding the postal service, $663,140,334.05 and $578,903,747.75 respectively. There was, therefore, a surplus amounting to $84,236,586.30. For the current year the Secretary estimates revenues amounting to $844,625,581.10 and expenditures amounting to $802,025,581.10, showing a surplus of $42,000,000 in round numbers. It may not be amiss to note that the five months' period ending with November closed with a deficit of something over $800,000, which at the close of business on Thursday had increased to a little over $3,000,000.

This has been a busy week at the national capital. Congress met on Monday, and in accordance with general expectation Speaker Cannon was chosen to succeed himself. The Speaker on the following day appointed the Committee on Banking and Currency, the only changes made being the substitution of Mr. Burton, of Ohio, for Mr. Shartel, of Missouri; of Mr. Crawford, of North Carolina, for Mr. Legaré, of South Carolina, and the addition of Mr. McHenry, of Pennsylvania, to the minority. Chairman Fowler subsequently appointed a sub-committee, with himself as chairman, to draft a currency bill. It is not expected that any measure will be ready for presentation in either house until after the holiday recess.

Further and notable progress toward a return to the normal in financial affairs was made this week, and the stock market was quick to discount the various developments, which pointed to the financial situation clearing with increasing speed as the week advanced. Chief among these features were the easing of call money, reports that the issuance of Clearing House certificates was being suspended at many cities, and that a return to a cash basis of payments was very near; a drop in the currency premium from nearly 2 per cent. to three-quarters of 1 per cent., and a very favorable showing as to the bullion reserve of the Bank of England. A diary of the week's events, given elsewhere, shows a number of other favorable happenings in detail, and from these we might select as additionally favoring features the further large engagements of gold, statistics regarding the large increase of the country's circulation in November, and the evidences that, succeeding the decline in call money rates, a considerable easing in, and increase in the volume of, time money offerings are to be expected. Of course, in the elements favoring an advance and presenting themselves this week, mention should be made of the fact that a large and rather extended short interest was evidently present, and the exigent covering by this element was a moving feature of great technical strength. Gold engagements for the week were the smallest for any week on the present movement, being only $4,000,000, but the total amount engaged now aggregates $96,750,000, of which about $75,000,000 has actually arrived.

It might be observed, however, that not all of the events of the week presented a favorable appearance. The rise of the money premium early in the week rather disturbing, despite the explanation that this was due largely to bidding for currency by banks which wished to fortify their position pending the call of the Comptroller of the Currency as to national bank conditions. Some effort was made to attach a disturbing appearance to the return of the Japanese ambassador, Aoki, to his own country, a change later announced to be followed by the appointment of Baron Takahira as his successor; but the really unfavorable news of the week, that regarding the suspension of large banks at Kansas City and Pittsburgh, had so little effect that it was aptly stated that the market advanced most rapidly on bad news. The responses to the call of the Comptroller of the Currency, which in addition to the routine requirements asked for a statement of the amount of Clearing House certificates outstanding, were, on the whole, regarded as encouraging, though they showed, as expected by many, that the banks at most large cities of the country were carrying cash reserves far in excess of their legal requirements, ranging from 30 to 55 per cent. It might be added that the banks of New York constitute a conspicuous exception to this policy. While the stock market was strong, however, the bond market was even more active, and the present advance may indeed be said to have been largely led by the latter.

One of the interesting gatherings of the week at Washington was the conference of representatives of commercial organizations called by Secretary Straus some time ago. After listening to an address by Secretary Root, who dwelt upon the importance of perfecting organization among American business men if they are to push their wares in the world's markets, the conference organized by the election of Mr. Gustav H. Schwab, of New York, as chairman. President Roosevelt welcomed the members at the White House with a brief address in which he commended as necessary to secure the best results, such coöperation between the government and private bodies as seemed to be foreshadowed by the conference. Another meeting of wide interest, of which the pressure on our space precludes a more extended notice at this time, was the National Rivers and Harbors Congress, which convened at the national capital on Wednesday, and was addressed by Secretary Root, Ambassador Jusserand, Chairman Knapp of the Interstate Commerce Commission, several governors of states and other men of note and consequence. The point was made by several of the speakers that the railroads are at present unequal to the task of carrying the commerce of the United States. Such men as President Hill, of the Great Northern, and President Finley, of the Southern Railway, welcomed the improvement of the waterways as affording a needed relief to the railways.

THE PRESIDENT'S MESSAGE.

One of a quick-witted race said centuries ago that a great book, meaning a large one, is a great evil, and it may turn out in the experience of modern statesmen that a long message may be an ineffective document. A reflection of this nature cannot fail to recur to the mind of a citizen who takes sufficient interest in the matter to note the size which the Presidential Message has now attained. The great length of Mr. Roosevelt's last message could not fail to attract attention; this year, unless we are mistaken, a new record has been set in the expansion of the document.

The opening paragraph has a direct reference to existing conditions. In it the President condemns the hoarding of money as the immediate occasion of monetary stringency. He then quotes at some length from his message of two years ago regarding the need of governmental regulation of corporations, and goes on to advocate either a national incorporation act or a law licensing railway corporations to engage in interstate commerce upon certain conditions. He recognizes that under modern conditions combinations and agreements between corporations are inevitable, and he suggests that the anti-trust law should be so amended as to forbid only the kind of combination which does harm to the general public, such amendment to be accompanied by, or to be an incident of, a grant of supervisory power to the government over the big concerns engaged in interstate business.

Touching the question of the currency, he urges that provision be made for emergency issues, which should be made with an effective guarantee and upon conditions carefully prescribed by the government. Such emergency currency, he suggests, must be based upon adequate securities approved by the government, and must be issued under a heavy tax. As to the question of the tariff, he says that the country is definitely committed to the protective system, and that the principle of the present tariff law could not with wisdom be changed. He thinks, however, that every dozen years or so the tariff laws should be carefully scrutinized so as to see that no excessive or improper benefits are conferred thereby, that proper revenue is provided, and that our foreign trade is encouraged. There must always be as a minimum, he urges, a tariff which will at least make good the difference in the labor cost of production here and abroad. The subject of tariff revision cannot, he holds, with wisdom be dealt with in the year preceding a presidential election, but should be discussed immediately after such election.

President Roosevelt again recurs in his message to the projects of an income tax and an inheritance tax, which have been discussed by him in preceding communications to Congress. He is still strongly in favor of a graduated income tax which will avoid constitutional objections. He urges upon Congress the extension of the principle of the eight-hour law, and the consideration of the question of providing for compulsory investigation of industrial controversies of sufficient magnitude to warrant the federal government in taking action, and of devising some way of limiting the abuse of injunctions in labor disputes. In several passages he urges the importance of conserving the natural resources of the country. He commends to the favorable consideration of Congress the plans of the Postmaster-General for a postal savings bank system, and for the extension of the parcel post, especially on the rural routes.

One of the most notable suggestions in the report is that Congress should provide an appropriation for the legitimate campaign expenses of each of the great national parties; an appropriation ample enough to meet the necessity for thorough organization and machinery, which requires a large expenditure of money. This is a suggestion which it will take some time to commend to the people at large. The President thinks that four new battleships should be provided for this year, and that the existing deficiency in coaling stations and docks on the Pacific should be remedied. He heartily recommends such legislation as will provide in generous fashion for the representation of the government and the people of the United States at the National Japanese Exposition to be held at Tokio in 1912.

MORE FAILURES BUT SMALLER LIABILITIES.

There were 1,108 failures reported to BRADSTREET'S for the month of November, with liabilities of $31,409,845 and assets of $20,040,157. There is here shown an increase in the number of failures of 14.2 per cent. over October, and of 36.8 per cent. over November a year ago. It is also the largest monthly total reported since January, 1906, and the heaviest total of November failures recorded since 1896. The liabilities, however, are less than one-fifth of those of October, which have been partially revised, while three and one-half times those of November a year ago. Reference to back records shows that, excepting October, 1907, there has not been so large a total of liabilities as that recorded in November, since October, 1903. The October total of liabilities was, of course, the greatest recorded in any one month since BRADSTREET'S failure reports were first compiled. This was due to the inclusion of a number of large bank and trust company suspensions, which enormously swelled the item of liabilities. Thus about twenty financial suspensions, some of them since resuming, revealed $120,000,000 liabilities in October, while the suspensions of thirty-one large commercial and manufacturing concerns accounted for liabilities of $25,504,140. In November, however, there were only a few large bank suspensions, furnishing $10,000,000 in liabilities, while there were thirty-six large suspensions of commercial and manufacturing concerns, with liabilities of only $12,000,000. It is easily evident, therefore, that October saw the greater stress, and that the November suspensions of large financial institutions were relatively fewer and far less important, indicating that the crisis of the late disturbance really passed during the month of October.

The following table gives the number, liabilities and assets of those failing during November, as compared with the same month of preceding years for fourteen years past:

	Number	*Assets*	*Liabilities*
1907	1,108	$20,040,157	$31,409,815
1906	810	4,199,577	8,587,366
1905	816	4,040,703	8,320,268
1904	809	4,187,312	8,610,996
1903	885	6,804,438	12,574,600
1902	818	3,075,651	6,548,808
1901	879	4,460,837	10,101,874
1900	837	6,408,510	13,480,524
1899	794	5,596,442	12,544,207
1898	936	7,086,965	13,788,982
1897	1,058	5,487,572	10,394,545
1896	1,226	13,034,018	23,104,052
1895	1,248	7,965,374	14,801,667
1894	1,188	7,325,193	12,666,907
1893	1,423	7,969,444	15,996,199

The failures, assets and liabilities monthly and quarterly since January 1 follow:

	Number	*Assets*	*Liabilities*
January	1,112	$8,637,164	$17,119,459
February	775	5,560,793	10,092,877
March	741	6,010,043	11,192,550
First quarter	2,628	20,208,000	38,404,886
April	733	5,626,601	9,888,052
May	755	5,290,090	10,546,963
June	675	10,869,132	17,706,398
Second quarter	2,163	21,785,823	38,141,413
Six months	4,791	41,993,823	76,546,299
July	733	8,716,782	13,931,290
August	673	5,014,826	9,375,992
September	694	5,580,098	11,384,483
Third quarter	2,100	19,311,706	34,691,765
Nine months	6,891	61,305,529	111,238,064
October	970	143,906,070	164,580,060
November	1,108	20,040,157	31,409,815

The results for eleven months of this year compare with eleven months of the eight preceding years as follows:

	Number	*Assets*	*Liabilities*
1907	8,969	$225,251,756	$307,227,939
1906	8,480	55,299,143	100,847,422
1905	9,049	56,578,551	109,062,376
1904	9,368	71,051,292	133,739,834
1903	8,685	75,381,374	136,599,319
1902	9,080	44,187,522	92,419,176
1901	9,589	55,695,341	118,428,207
1900	8,833	50,038,945	109,913,257
1899	8,687	37,061,409	84,325,135

Owing to October's immense liabilities the eleven months' total is nearly three times as large as in 1906, and the heaviest aggregate reported for fourteen years.

There were 152 failures, with liabilities of $1,693,553, in Canada in November, as against 121 failures, with liabilities of $944,852, in November a year ago. There is here indicated an increase of 25.6 per cent. in the number of failures and an increase of 79 per cent. in liabilities as compared with November, 1906.

CURRENCY REFORM—A CENTRAL BANK.

Judging from the advices that have thus far come from Washington, Congress is not in a mood to be hurried into the enactment of a law dealing with the general subject of currency reform. This is particularly true of the Senate, whose leaders in matters affecting financial legislation are determined to take time to canvass thoroughly all the plans before the country. It seems likely, therefore, that by the time the national legislators are ready to act, the various plans that have been evoked or revived by the recent experience of the country will have had a thorough discussion. Among the plans which have engaged the attention of bankers and public men in a marked degree lately, and which will doubtless receive the careful consideration of the national legislators, is that of a central bank of issue.

As our readers know, this plan is not a new one. It was advocated in a report of the special currency committee of the New York Chamber of Commerce last year, though owing to the belief that public sentiment might not be found favorable to the project, the committee proposed as an alternative plan the issue of additional currency by the banks under proper regulations. The proposition has lately been revived, and, as seems to be indicated by the reports of public discussions, it seems to have gained considerably in popular support. It has not been a singular thing for a public man to advocate the establishment of a central bank as an abstract proposition and then to express the opinion that such a plan could not secure the support of Congress or of any considerable part thereof. It would be interesting to learn whether recent happenings have done anything to commend the idea to our legislators.

As an indication of how the notion is regarded outside of Congress, it may not be amiss to direct attention to the discussion had on currency reform measures at the Academy of Political and Social Science, at Philadelphia, on Monday evening last. Mr. Isaac N. Seligman, of New York, strongly advocated the establishment of a central bank, holding that the United States might very profitably be guided by the example of European countries. He suggested that the Secretary of the Treasury and the Comptroller of the Currency should be represented on its board of directors, that the Treasury funds should be deposited with it, and that the bank should have the power to issue notes in a certain proportion to its gold reserve or capital. Mr. Jacob H. Schiff urged that the issuance of any circulating medium based upon assets should be governed by some central authority, whether it be a central bank or a central association of national banks. He personally favored a central association of national banks as against a central bank, for the reason that, in his view, at the present time the country is not prepared to sanction so far-reaching a plan, which would revolutionize the entire national banking system.

Another voice lifted up in favor of the central bank plan was that of Comptroller Ridgely, who said that the experience of the rest of the world in every important country had shown that the best way to meet the demands of the currency system was by means of a strong central government bank which would handle the finances of the general government, act as reserve agent for other banks, and have the sole right to issue credit bank notes, all under government control and subject to severe government supervision and inspection. Still another advocate of the central bank was Mr. William A. Nash, of New York, who declared that the most venerable and senseless prejudice that obstructs the national well-being is the dread of a great central bank. It will be seen that the advocates of a central bank now speak with a more assured and confident tone than they did a year ago. Their plan may not be adopted, but that will not be for lack of energy in supporting it. It may be, too, that in the country at large there may be less of a disposition to shelve the project without discussion than has been the case at any time since the passing of the second United States bank.

November	*No.* 1907	*Assets* 1907	*Liabilities* 1907	*No.* 1906	*Assets* 1906	*Liabilities* 1906
New England	136	$1,656,483	$3,292,639	119	$662,345	$1,238,153

BANK CLEARINGS DROP NEARLY ONE-THIRD.

November bank clearings totals reflect a combination of poor trade, reduced industrial activity, backward collections, dislocated domestic exchanges, lessened speculation at leading financial centers, and the passing of the banks of the country from a cash to a credit basis, in a total of clearings at all cities the smallest for three years. In addition, every group of cities in the country shows a decrease both from October this year and from November a year ago.

The total clearings at ninety-four cities for the month of November, twenty-four business days included, aggregated $9,568,632,733, a decrease of 30.1 per cent. from October, and of 29.2 per cent. from November a year ago. Of the total clearings New York furnished $5,500,742,162, a decrease of 32.8 per cent. from October, and of 36 per cent. from November a year ago. Outside of New York, the clearings at ninety-three cities fell to $4,067,390,571, a decrease of 24.8 per cent. from October, and of 17.3 per cent. from November last year.

Following are the aggregates of clearings monthly at all cities, compared with the same periods in five preceding years:

[Six figures omitted.]

	1907	1906	1905	1904	1903	1902
Jan	$14,911	$16,245	$11,785	$9,364	$11,032	$10,576
Feb	11,692	12,390	10,599	7,664	8,420	8,328
Mar	14,533	12,923	12,855	8,335	9,533	8,884
April	12,536	12,814	12,672	8,267	9,530	10,881
May	12,276	13,145	11,988	8,171	9,073	10,348
June	11,077	12,166	10,756	8,016	9,386	8,177
July	12,257	11,579	10,806	8,625	9,724	10,139
Aug	11,561	13,015	10,846	7,968	7,888	8,906
Sept	10,448	12,413	10,804	8,785	7,625	10,106
Oct	13,609	14,413	12,538	11,439	9,111	11,207
Nov	9,568	13,528	13,057	12,443	8,105	10,032
Dec	....	14,182	14,361	12,738	9,225	9,810

The monthly clearings at New York and at all other cities reporting compare with preceding months of 1906, 1905 and 1902 as follows:

[Six figures omitted.]

	New York City				Outside New York			
	1907	1906	1905	1902	1907	1906	1905	1902
Jan	$9,638	$11,238	$7,735	$6,929	$5,273	$5,007	$4,050	$3,634
Feb	7,331	8,324	7,118	5,348	4,362	4,066	3,480	2,977
Mar	9,562	8,377	8,731	5,506	4,971	4,545	4,124	3,377
April	7,667	8,543	8,681	7,352	4,869	4,271	3,991	3,526
May	7,335	8,793	7,884	6,805	4,941	4,352	4,104	3,541
June	6,369	7,816	6,735	4,967	4,709	4,350	4,020	3,207
July	7,312	7,256	6,839	6,503	4,945	4,322	3,967	3,546
Aug	6,890	8,833	6,980	5,816	4,670	4,182	3,865	3,087
Sept	6,039	8,314	6,859	6,804	4,418	4,099	3,944	3,300
Oct	8,196	9,344	8,026	7,496	5,413	5,069	4,512	3,799
Nov	5,501	8,608	8,542	6,539	4,067	4,021	4,514	3,495
Dec	....	9,228	9,689	6,166	....	4,954	4,671	3,668

New York City's clearings in November were the smallest recorded since September, 1904, and the total outside of the metropolis was the smallest since February, 1906.

Following are the gains or losses by groups, in percentages, shown in November and the eleven months, as compared with the same periods a year ago:

	November	Eleven months
New England	Decrease 21.9	Increase .7
Middle	Decrease 34.1	Decrease 12.9
Western	Decrease 17.3	Increase 8.0
Northwestern	Decrease 13.4	Increase 13.8
Southwestern	Decrease 7.0	Increase 14.7
Southern	Decrease 12.8	Increase 3.3
Far-western	Decrease 33.9	Increase 13.2
Total, United States	Decrease 29.2	Decrease 7.0
New York City	Decrease 36.1	Decrease 14.2
Outside New York	Decrease 17.3	Increase 6.9
Canadian	Decrease 3.7	Increase 7.9

It is worth noting that the southwestern group shows the smallest decrease from a year ago reported by any, and in that section, by the way, is located Kansas City, the only large city of the country reporting a gain over November a year ago. The decrease in that group is only 7 per cent. Against this are to be noted losses of 34 per cent. in the middle group and of 33.9 per cent. in the far-western group, while New England reports a decrease of 21.9 per cent., the northwest a loss of 13.4 per cent., the south a loss of 12.8 per cent., and the western group a decrease of 16 per cent. For the eleven months the only group showing a decrease is the middle group, containing New York, but the gain in New England is close to the vanishing point, and that in the south is only 3.3 per cent.

Canadian clearings for November aggregate $389,839,301, a decrease of 3.7 per cent. from November a year ago, while the eleven months' total is $3,855,798,035, a gain of 7.9 per cent. over 1906.

BANK CLEARINGS AT 117 CITIES FOR NOVEMBER AND ELEVEN MONTHS, 1907 AND 1906.

CLEARING HOUSES.	November		Eleven months	
	1907	1906	1907	1906
Boston	$578,929,122	$754,233,613	$7,574,018,595	$7,565,313,127

A PHENOMENAL INCREASE IN CIRCULATION.

The increase in the money in circulation for the month of November largely exceeded even the heavy gain for the month of October, amounting as it did to the remarkable sum of over $131,800,000. The month was also notable for the large increases in gold coin and in national bank notes. The former showed a gain of over $66,100,000 as compared with the preceding month, while the latter exhibited an increase of over $53,700,000. The other items showed comparatively little change. Gold certificates showed a decrease of over $1,600,000 and Treasury notes of 1890 one of a little over $64,000, but the other items exhibited gains. Silver certificates increased over $4,600,000 and subsidiary silver over $5,500,000, while United States notes exhibited a gain of over $1,400,000.

The general stock of money coined or issued, the amount held in the Treasury as assets of the government, and the money in circulation on December 1, are set forth in detail in the following table:

	General stock of money	Held in Treasury	Money in circulation
Gold coin, including bullion in Treasury	$1,561,714,710	$173,917,898	$540,577,952
Gold certificates	....	71,582,660	675,636,209
Standard silver dollars	562,703,982	37,433	90,979,549
Silver certificates	....	2,733,880	468,953,120
Subsidiary silver	136,201,145	3,221,533	132,979,612
Treasury notes of 1890	5,545,000	8,033	5,537,076
United States notes	346,681,016	1,998,059	344,682,957
National bank notes	656,28,196	7,323,079	648,805,117
Total	3,269,065,058	260,823,475	3,008,241,583

In the following table are given statistics of the amount and kind of currency in circulation December 1, outside the United States Treasury, compared with November 1, 1907, and December 1, 1906:

	Dec. 1, 1907	Nov. 1, 1907	Dec. 1, 1906
Gold coin	$540,577,952	$574,459,086	$685,974,422
Gold certificates	675,635,209	677,295,909	572,972,119
Stand. silver dollars	92,979,549	88,822,959	84,211,919
Silver certificates	468,953,120	464,349,568	470,118,583
Subsidiary silver	132,979,612	127,461,229	122,261,710
Treasury notes, 1890	5,537,067	5,601,926	6,811,576
United States notes	344,682,957	343,254,153	343,260,322
National bank notes	648,895,117	595,123,866	583,463,604
Total	3,008,241,583	2,876,368,696	2,869,074,255

Money circulating in the United States on December 1 for a series of years compares as follows, according to the official figures:

1907	$3,008,241,583	1899	$1,978,528,733
1906	2,869,074,255	1898	1,886,879,504
1905	2,662,134,539	1897	1,721,034,538
1904	2,573,888,367	1896	1,646,444,746
1903	2,449,168,418	1895	1,594,195,479
1902	2,352,710,158	1894	1,637,226,451
1901	2,250,256,280	1892	1,614,790,266
1900	2,158,761,361		

It will be seen from a glance at the figures given above that the officials have not yet revised the statistics for the corresponding date last year, so that comparisons between the totals cannot be readily made. The total for December 1 last year is retained, though the figure as to the amount of gold coin in circulation has since been reduced in accordance with the revised estimate of the Director of the Mint. Leaving this out of account, we find that there was for the twelve months an

increase of over $102,600,000 in gold certificates and one of over $65,400,000 in national bank notes. Standard silver dollars showed a gain of over $6,700,000 and subsidiary silver one of over $10,700,000, while silver certificates decreased a little over $1,100,000. Treasury notes of 1890 showed a decrease of over $1,200,000, while United States notes showed a gain of a little over $1,400,000. The per capita circulation, calculated on the basis of a population estimated at 86,666,000, is put by the Treasury experts at $34.71. This represents an increase of $1.48 for the month, but upon the face of the official figures an increase of only $1.05 as compared with the corresponding date last year. For reasons which have heretofore been given in these columns, however, the estimate of per capita circulation for this time last year should be reduced, so that the gain for the year should be larger than appears on the face of the figures.

NEW ENGLAND CAR CHARGES.

Not only are the disputes which have arisen between the New York, New Haven & Hartford Railroad Company and the other railways of the country of much importance to transportation interests, but they have a direct bearing upon the position of shippers by rail in other sections of the country to and from New England points. The decision of the New Haven's management to withdraw from the per diem agreement of the American Railway Association involves complications of no ordinary kind, but this has been supplemented by a further exhibition of aggressiveness on the part of the New Haven, which has this week announced that it will cancel all joint rates through Jersey City with other roads than the Pennsylvania system.

To arrive at a full understanding of these matters it is necessary to explain the origin of the per diem controversy. Prior to 1902, where the freight cars of one railway company passed from its own lines to those of other roads, the company which owned them received an allowance for their use of three-quarters of 1 cent for each mile that they were hauled by any other company or companies. This mileage basis for the use of foreign cars, as they are termed, was, however, objectionable in many respects. If the cars were not being actually moved, the company to which they belonged received nothing, even though they remained idle on sidings or in terminal yards. The system also encouraged the detention of cars through the tardiness of consignees with regard to unloading them, the demurrage charge of $1 a day, after forty-eight hours, being insufficient to prevent the use of cars practically as warehouses for indefinite periods. Furthermore, each road in the country was dependent upon the account kept by the other roads on which any of its cars happened to be for the mileage they made, which resulted in more or less suspicion that some managements of the old style developed carelessness, or worse, in keeping the statistics as to the mileage of foreign cars and the amounts payable therefor.

After long consideration the American Railway Association, which comprises all the principal roads in the country, arrived, in July, 1902, at an agreement abrogating the mileage system, and substituting for it a payment of 30 cents per diem to the owning company for each day any of its cars were upon the lines of another company, to be paid by the latter. The new system worked well, but there nevertheless was complaint that the 30 cents per day charge was too low, and after a good deal of agitation it was decided last summer to increase the amount to 50 cents per day. In the deliberations of the association the New Haven vigorously opposed the increase, and when it was decided by the other companies to put it in force the New Haven promptly gave the necessary three months' notice of its withdrawal from the agreement. This was tantamount to giving that company the use of any foreign cars which were on its lines free of all charges, and, as was natural, other companies endeavored as far as possible, in making shipments to New England points, to see to it that their cars were routed over the Boston & Albany or the Boston & Maine systems, which remained faithful to the agreement. Very recently, however, the Boston & Maine and the Boston & Albany have both given three months' notice that they, too, would no longer consent to the 50-cent per diem charge, which, of course, brings the question to a crisis. On behalf of the New Haven it is urged that it is a peculiarly situated system, the New England centers which it reaches being terminal points, which adds to the expense of handling freight. Also that the bulk of the freight consigned to such places is heavy raw material, while the outward freight comprises to a great extent, finished products, which are light, so that a large proportion of the cars which come to it loaded from other parts of the country go out empty. Furthermore, a Connecticut statute obliges railroads in that state to allow consignees ninety-five hours to unload cars, instead of the forty-eight hours of grace before demurrage begins, prevalent in other parts of the country. For prudential reasons the New Haven has found it advisable to extend the Connecticut time allowance to other parts of its system in the different New England states, which constitutes an additional reason for its opposition to the increased per diem charge, which, it sets forth, renders the handling of freight too expensive to stand such an exaction.

To add to the complications which this has created in the situation with regard to freight passing to and from New England points to other parts of the country, the New Haven management has this week announced that in thirty days it will cancel the joint rates for carload lots with the Baltimore & Ohio, Jersey Central and Reading on freight passing through Jersey City. This would in effect leave the Pennsylvania system as the only direct connection at that point of the New Haven. This has naturally created much commotion, not only among the roads involved, but also among shippers at points on the lines which would thus be cut off from making through rates to New England points, and vigorous protests have already been lodged by such interests. On the part of the New Haven it is stated that there is great congestion in its yards at its Harlem river terminals, and much difficulty in transferring cars by floats from that point to Jersey City. Furthermore, it is intimated that its plan is to divert as much through New England traffic as possible to its own Poughkeepsie bridge route and its lines west of the Hudson river. The controversy is, to all appearances, a rather serious one, not only for the railroads, but for shippers in all parts of the land, and it is not at all improbable that the matter will be made the object of an investigation and action by the legislative and other authorities in the eastern states, or by the Interstate Commerce Commission.

THE WEEK'S FINANCIAL HISTORY.

The synopsis here inserted of events of the week having a direct bearing on the financial situation is continued as forming a convenient chronological record which may be found of interest in the future:

November 30.—Stock market advances 1@2 points on heavy short covering. Currency premium drops to ½ per cent. Protests before Supreme Court at Albany against permanent receiverships for suspending Brooklyn banks. Bank statement shows deficit of $52,989,425, decrease of $1,114,175 for week. Loans increase $10,080,100, and cash increases $1,980,300.

December 2.—Congress meets. Stock prices weak early, but closed strong at the highest of movement. Call money higher on shifting of loans. Rates, 5@13; prevailing rate, 11 per cent. Time, slightly more cheerful; rates unchanged. Boston reports no Clearing House certificates issued week ending November 30. Gold engaged, $1,500,000. Currency premium slightly higher at ½ to 1¼, closing at 1 per cent. Savings banks reported redepositing money with other banks. Calumet & Hecla dividend cut from $15 to $10. Chelsea (Michigan) Savings Bank closed. November copper exports, 33,700 tons, largest recorded. Wheat irregular. Cotton fairly steady.

December 3.—Stock market irregularly lower on President's message, departure of Japanese minister, higher currency premium, and liquidation on late heavy advances. Call money easier. Rates, 4@8; prevailing rate, 7 per cent. Time, scarce. Mercantile paper dull. Sharp rise in Standard Oil stock. Good demand for bonds. Money premium up to 2 per cent., said to be due to "window dressing," in anticipation of Comptroller's call. London still sells stocks on balance. Armenian bank at Constantinople fails with liabilities of $1,000,000. Copper prices decline ⅛ cent per pound. Wheat irregular. Cotton heavy.

December 4.—Stock market weak early, but strong later on Hill-Harriman deal rumors, decline in currency premium on report that Comptroller of Currency would call for national bank statement, easy money, and large increase in circulation in November. Call money, 3@7 per cent.; prevailing rate, 6 per cent. Time, inactive. Small loans by out-of-town banks at 10@12 per cent., sixty to ninety days. Mercantile paper bought sparingly. Premium on currency, ¼@1¼, closing at ¼. Railroad earnings indicate continued decreases in earning power. Restriction in iron production continues. Copper reduced ⅛ cent. American Smelting Company declares regular dividends. Interborough Rapid Transit declares regular dividends. Gold engagements, $1,500,000. Northern Pacific Railroad reported laying off 25 per cent. of clerical and operating forces. Wheat active and lower. Cotton one fifth cent higher early, loses some of advance later. Circulation statement shows $66,000,000 increase in gold coin and $54,000,000 in bank notes. Alabama railroads apply for additional injunctions against new state laws. Erie Railroad withdraws from Central Passenger Association. Emigrant east-bound rates cut.

December 5.—Stocks open easy on western bank failures, but advance rapidly later, and, despite late reaction, close 1@3 points higher. London buys freely. Bonds continue to advance sharply. Bank of England shows increase in gold holdings. National Bank of Commerce at Kansas City suspends with liabilities of $24,276,000. Money on call not above 6 per cent. Time, scarce and unchanged. Currency premium, 1½ early, closed at ¼. Stock sales, 1,000,000 shares, largest volume since October 22. Gold engaged, $500,000. Cotton strong early, but loses most of advance on bearish crop estimate of 12,100,000 bales. Wheat up on better export demand and reported Argentine damage. Western national bank reports show ratios of reserve to liabilities of 30 to 55 per cent.

December 6.—Stock market continues to advance. Convertible bonds lead in strength. Short covering still a feature. Fort Pitt National Bank of Pittsburgh suspends. Regular troops sent to Goldfield, Nev. New York City board of estimate suspends contemplated public improvements valued at $122,000,000. Secretary Cortelyou decides to issue only $25,000,000 of Panama bonds. Standard Oil advances 20 points on curb. Money on call, 5½@9; prevailing rate, 6 per cent. Time, inactive. Mercantile paper quiet, but feeling better. Gold engaged, $500,000; total for week, $4,000,000; total to date, $96,750,000. Receipts on movement, $75,000,000. Banks gain in cash $7,300,000. Money premium 1 per cent. early, closing at ¼ per cent. Cotton 25 points up early, later losing slightly. Wheat irregular. Chicago reports increasing bank deposits and Christmas trade. Wheat exports (BRADSTREET'S statement) close to record of year.

EDITORIAL NOTE.

Among what have been considered the significant developments in the securities market of late is the renewed activity in the bond dealings and the more or less decided tendency of such values to appreciate. It cannot be said that this movement has been of a general character. The largest transactions and the greatest advances were mostly confined to issues which are usually objects of attention at times when stock market activity at large is assuming increased proportions, or in those which partake of a speculative character. Still the change from total stagnation in the bond dealings at the New York Stock Exchange, and from liquidating tendencies in that portion of the market, to dealings running up to more than $5,000,000 of par values per diem, with rises of as much as 10 points in certain issues, has been taken as a healthy sign, indicating that recuperation in the financial position is asserting itself and that holders of capital are being attracted by the low quotations for securities of this description. The extent of the decline which had taken place in various prominent active bonds, and the subsequent recovery, are shown by the following table giving the high prices of the year, the low points touched on the decline, and the quotations attained in the recent rally:

	High	*Low*	*Rally*
Atchison convertible 5s	102	89½	95¼
Burlington joint 4s	98⅞	82¼	92
Rock Island collateral trust 4s	77	49¾	61
United States Steel second 5s	99¼	74½	84⅞
New York Central gold 3½s	94⅝	85	90
Pensylvania convertible 3½s, 1915	95	83¼	87¾
New York City 4½s	107¾	102⅞	108½

It cannot be said that the demonstration has extended to the inactive part of the bond list or to high-grade investments as a class. Bond dealers, while reporting that there is a better inquiry, do not seem to find any great improvement as yet in the over-the-counter demand. It is, however, held that with further relaxation in the money market, active dealings will develop in all classes of bonds, and that there will be a considerable absorption of them at advancing prices.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Insurance—License—Revocation.

The Insurance Commissioner of Kentucky cannot without statutory reasons revoke the license of an insurance company to do business in the state, according to the decison of the Court of Appeals of the state in the case of Mutual Life Insurance Company of New York vs. Prewitt, Commissioner.

Accident—Insurance—Dog Bite.

The Supreme Court of Pennsylvania held, in the case of Farner vs. Massachusetts Mutual Accident Association, that the bite of a dog is an accident and should be classed under the "accident provisions" of an accident insurance policy, and that where a person was bitten in the thumb by a dog and the use of the hand was interfered with from the moment of the bite, and so continued until death ensued two weeks later, he was "immediately disabled" within the meaning of an accident insurance policy.

Employers' Liability—Superintendent.

The New York Court of Appeals held, in the case of Guilmartin vs. The Solvay Process Company, that in an action brought under the Employers' Liability act, chapter 600 of the Laws of 1902, for personal injuries to a factory workman occasioned by the negligence of the superintendent, the fact that the accident was caused by the superintendent while he was engaged in the performance of a mere detail of his work, namely, the stopping of machinery, did not relieve the employer from liability. The court held that the question of assumed risk by the employee was, under the act, primarily a question for the jury.

Corporation—Capital—Increase.

The Supreme Court of Indiana held, in the case of Marion Trust Company Receiver vs. Bennett et al., that a special act by which a corporation, previously chartered by special law with an authorized capital of $100,000, was empowered to increase its capital to any amount determined upon by the stockholders was void as in violation of section 13 of article 11 of the state constitution, forbidding the creation of corporations by special act. The court further held that a subscription to void stock issued under such pretended authority could not be enforced by the corporation nor by a receiver for such corporation, neither of which could assert any estoppel against such subscriber, and that an unconstitutional law affords no basis for action creating a de facto corporation.

Contract—Procuring Insurance.

The Supreme Court of Wisconsin held, in the case of Rainor vs. Schulte, that one agreeing to procure insurance on the building of another in consideration of the latter agreeing to pay the premium therefor was bound thereby whether he had or did not have authority to represent and bind some unnamed insurer or insurance agent. The court further held that one agreeing to procure "forthwith" insurance on the building of another was entitled before becoming liable for a breach to a reasonable time within which to procure insurance, and that where the building, on the morning of the second day after the agreement, was destroyed by fire, no insurance having been procured, the submission to the jury of the question whether the delay was or was not reasonable would be approved.

Municipality—Franchise—Regulations.

Section 164 of the Kentucky constitution provides that no county, city or other municipality shall be authorized to grant any franchise or privilege, or make any contract in reference thereto, for a term exceeding twenty years, and that before granting such franchise for a term of years, such municipality shall first, after due advertisement, receive bids therefor publicly and award the same to the highest and best bidder. In the case of Hilliard vs. George G. Fetter Lighting & Heating Company, recently decided by the Court of Appeals of Kentucky, an action was brought by a citizen and taxpayer of the city of Louisville to enjoin the Board of Public Works of the city from granting a permit to construct conduits, manholes and other permanent structures in the streets of the city, for carrying electric wires or steam pipes therein, under a city ordinance, for a term of one year. The court held that the municipal authorities could not grant a franchise or privilege for a use intended to be permanent, except in the manner pointed out in the section above mentioned; that that section could not be evaded or its purposes nullified by making the grant for an indefinite period, or for less than a term of years, or by any other scheme or device, and that if a person or corporation desired to obtain for a year, or for less than a term of years, a franchise or privilege for a use intended to be permanent, and the city authorities were disposed to grant the request, the forms prescribed in the section mentioned must be followed.

Real Estate—Contract—Performance.

The New York Court of Appeals held, in the case of Rosenberg vs. Haggerty et al., that in an action for specific performance of a contract to convey real estate, the relief granted must generally be with respect to the facts existing at the close of the trial; that if it appears that, without culpable conduct on the part of the grantor, there is then pending an action affecting his title and disabling him from performing, the court should only decree a return of the deposited moneys and such further sum as will cover the vendee's expenses and damages, and that a decree postponing the fulfillment of the contract until the determination of an action affecting the grantor's title, in the absence of any evidence of fraud or neglect on his part, is unauthorized.

Alien Sailor—Immigration Law.

Section 18 of the Immigration act of 1903 makes it the duty, under penalty, of any officer in charge of a vessel bringing an alien into the United States to adopt due precautions to prevent the landing of such alien at any other place than that designated by the immigration officers. The Supreme Court of the United States held, in the case of Taylor vs. The United States, that that section does not apply to the ordinary case of a seaman deserting while on shore leave, and does not apply to seamen who are carried to an American port with a bona fide intent to take them out again when the ship goes on, where there is no evidence that the seamen were making the voyage as a pretext to come to this country and desert. The court further held that an alien who had been refused leave to land from a foreign ship and had been ordered to be deported might subsequently be accepted as a sailor by the master of the ship even if bound for another American port.

Special Ticket—Consideration—Forfeiture.

The Supreme Court of Indiana held, in the case of Baltimore & Ohio Southwestern Railroad Company vs. Evans, that where a twenty-ride ticket was purchased for $8 over a route for which the regular fare was 69 cents a trip, and a special agreement that it should only be used by the purchaser and dependent members of his family, under penalty of forfeiting the ticket was a part of the consideration for the reduced fare, and where the purchaser allowed strangers to use coupons from the ticket in violation of his contract, the ticket thereby became forfeited, and the purchaser had no right of action for a subsequent refusal of the railroad company's conductor to honor his ticket nor for his expulsion or refusal to pay fare. The court further held that the fact that the conductor did not know of such forfeiture, and gave an insufficient reason for refusing to honor the ticket, did not enlarge the plaintiff's right against the carrier.

Contract—Advertisement—Illegality.

A section of the Baltimore city charter requires that all proposals for bids for public work costing over $500 be advertised in two or more daily newspapers published in Baltimore city "unless otherwise provided for." In the case of Bennett et al. vs. Mayor and City Council of Baltimore, recently decided by the Court of Appeals of Maryland, the appellant sought to restrain the appellee from performing a contract made for paving a street because the advertisement did not comply with the law, in that it was inserted in a German and an English newspaper instead of two English papers. The court held that in the absence of a direction to the contrary it was well settled that the publication of a notice required by law to be made must be in the English language and in a newspaper printed in that language, and that in the case before it the law required that the advertisement should be published in two English papers "unless otherwise provided for," and that property holders and taxpayers had the right to enjoin the performance by the public authorities of contracts which did not meet the requirements of the law.

BUSINESS NOTES.

Growth of Postal Service.

The annual report of Postmaster-General George V. L. Meyer calls attention to the enormous expansion of the postal service during the past fifty years. In 1857 the receipts of the postal service were $8,053,952, the expenditures $11,508,058, and the deficit $3,454,106. Since then the receipts have nearly doubled every ten years and the expenditures have increased correspondingly. In the year 1897 the receipts had risen to $82,665,462, the expenditures to $94,077,242, and the deficit to $11,411,779. Ten years later, June 30, 1907, the receipts for the fiscal year had doubled, being $183,585,005, with expenditures of $190,238,288. The deficit, however, had dropped to $6,653,282. Consequently, if one may judge by the figures of the last fifty years, every indication points to the probability of the postal receipts passing the $350,000,000 mark in 1917.

Manufactures in Oklahoma.

While the new state of Oklahoma is properly classed as an agricultural state, yet manufactures play an important part in its progress and have largely conduced toward its present prosperity. These figures are from the special census of manufactures, 1905: Establishments number 1,123, with $16,124,417 capital; officials, clerks, etc., to the number of 816, earn in yearly salaries $718,420; wage earners number 5,456, and their yearly wages are $2,809,402; general expenses amount to $1,471,555; the value of the materials used is $16,393,952, and the yearly product is $24,459,107. In order of importance as to capital and yearly product the six leading manufacturing industries are flour and grist mills, cotton-seed oil and cake, printing and publishing, artificial ice, brick and tile, and lumber and planing mill products. There are 108 flour and grist mills, 413 printing and publishing establishments, twenty-two ice factories, fifty lumber and planing mills, twenty-four cotton-seed oil mills and twenty-three brick and tile establishments.

Cost of Work on Panama Canal.

The *Engineering News* says: "It is common enough nowadays to hear people remark that the government is certainly going to build the canal; and that the work is going ahead rapidly and well; but that the cost will be 'out of sight,' 'because government work is always so costly, you know!' While it is too soon yet to say what unit prices will be reached for the bulk of the work, when the whole plant is in place and the operating force is 'tuned up,' the figures for cost of excavation in the Culebra cut for the past year are certainly interesting. It appears that the average cost of excavating about 5,500,000 cubic yards, three-fifths of it rock, hauling it some ten miles by train, and distributing it on the dumps, was 82½ cents per cubic yard, which figure includes an arbitrary allowance of 12 cents per cubic yard for the cost of the plant used. Remembering the tropical conditions, the heavy rainfall, the eight-hour day, the high cost of labor, fuel, materials and everything else, this indicates that they are not only 'making the dirt fly' at Panama, but making a dollar do the most work possible—which has been set down by high authority as a proper function of the engineer. Again, in dredging work, we learn that at La Boca, on the Pacific end, an old French ladder dredge excavated during the past year 1,213,000 cubic yards, at an average cost per cubic yard of about 10⅓ cents, the material being towed out to sea in hopper barges. Certainly figures like these deserve consideration by those who make rash generalizations as to the extravagance of government work."

New National Banks.

Conditions existing during the past few weeks are reflected in the limited number of national banks organized during November, only nineteen charters having been granted, the capital of the associations being $965,000. Twelve of the banks organized during the month were with individual capital of less than $50,000, and seven with capital of $50,000 or over. Two state banks, with capital of $25,000 each, were converted into national banks; five state banks were reorganized, leaving twelve as the number of primary organizations. The work of the month brings the total number of charters granted from March 14, 1900, to November 30, 1907, up to 3,692, of which 2,401, with total capital of $62,627,500, were organized under the act of March 14, 1900, and 1,291, with capital of $153,767,800, under the act of 1864. Of the number of banks started in this period, 428 were conversions of state banks, 1,188 reorganizations of state or private banks, and 2,076 by primary organization. The number of active national banks on November 30, 1907, was 6,655, with authorized capital of $910,609,775; circulation outstanding, secured by bonds, $610,156,008; circulation outstanding, covered by lawful money, $46,062,188, and total circulation outstanding, $656,218,196. Number of national banks in existence, authorized capital stock, bonds on deposit to secure circulation, circulation secured by bonds, and by lawful money, on March 14, 1900, and November, 30, 1907:

	March 14, 1900	*November* 30, 1907
Number of banks	3,617	6,655
Authorized capital	$516,308,095	$910,609,775
Bonds on deposit	244,611,570	618,394,610
Circulation, on bonds	216,374,795	610,156,008
Circulation, lawful money	38,027,935	46,062,188
Total circulation	254,402,730	656,218,196

The New West's Expansion.

"It is noticed that the Trans-Mississippi Congress, recently in session at Muskogee, was the largest convention in the whole history of such gatherings. This was the eighteenth annual session. It had 2,500 delegates, which was a much greater number than ever before. All this is a tribute to the expansion which the trans-Mississippi region has been scoring in recent times," says the St. Louis *Globe-Democrat*. "There are now twenty states west of the big river, Oklahoma adding one to the list a few days ago. There will probably be twenty-two states here in a few years, as New Mexico and Arizona will ultimately be let in, and very likely as separate states. When, in 1889-90, half a dozen states were created in the northwest, that section made a big advance in population and wealth in the next few years. It is now the southwest which is making the largest gains, and the gains are only beginning. In the ten years ending 1900 the population center moved only fourteen miles west, but it also moved three miles south. This southward swing of the population center was due to the pull which was given to it by the inrush of population into Oklahoma, Indian Territory and Texas. That stream is still at its flood stage. The census of 1910 will undoubtedly show a longer westward stride of the population center in the decade than the latest enumeration revealed. The trans-Mississippi west is growing faster in the present decade than it did in the one which closed with 1900. Our Pacific trade is increasing, and this means a large expansion in the population and the business of the states on the Rocky mountains' sunset side. The newer and greater west—that which stretches from the Mississippi to the Pacific—is the part of the country which is to score the biggest growth of the future.

Transactions on New York Stock Exchange.

Transactions in stocks on the New York Stock Exchange for the month of November aggregated 9,647,483 shares, a decrease of 7,662,698 shares as compared with the previous month, and of 9,764,462 shares as compared with the corresponding month last year. Trading in stocks and bonds by months follows:

	Stocks	*Bonds*
January	23,014,797	$53,266,000
February	16,483,152	31,941,500
March	32,250,842	53,958,500
April	19,220,048	43,254,400
May	15,755,363	33,950,500
June	9,734,359	21,666,500
July	12,797,738	25,348,700
August	14,502,813	30,152,500
September	12,142,239	36,415,500
October	17,310,181	62,697,500
November	9,647,483	70,555,750
Total	182,858,923	463,216,350

Comparisons on sales of stock follow:

	November	*Eleven mos.*
1907	9,647,483	182,858,923
1906	19,411,945	263,449,226
1905	26,884,07	231,532,093
1904	31,960,929	158,353,934
1903	10,744,781	145,572,190
1902	17,115,723	172,601,439
1901	18,360,459	248,905,011
1900	22,646,898	114,934,640
1899	13,579,247	153,028,347
1898	10,935,020	96,939,842
1897	5,763,641	70,773,847

Bond dealings for the month and the eleven months of this year make the following showings as compared with preceding years:

	Bonds (par value) *November*	*Eleven mos.*
1907	$70,555,750	$463,216,350
1906	41,821,800	631,976,500
1905	78,203,500	945,480,420
1904	216,853,500	918,657,560
1903	50,385,600	620,166,550
1902	54,511,700	830,663,550
1901	90,895,500	923,827,620
1900	79,266,500	474,042,960
1899	48,279,720	783,042,310
1898	109,191,820	766,102,540
1897	33,701,750	483,331,990

CURRENT BUSINESS NEWS.

Commercial.

Consul-General John P. Bray, of Melbourne, reports that present indications would imply that the wool production of Australasia during the forthcoming season (1907-08) will be about that of last season, viz, 2,900,000 bales. It is anticipated that the quality, price and number of bales (100,000) of the wool purchased for the American market will also show very little alteration.

Not in years have the incorporations filed in the eastern states been as small as they were last month, when the charters for $1,000,000 or over involved only $44,300,000, or $34,800,000 less than in the previous month and $183,650,000 behind the November total a year ago. The nearest approach to last month's low-water mark in regard to the output of new concerns was in July, 1905, when the figures were $61,315,000. Following are the comparative figures, compiled by the *Journal of Commerce*, of companies incorporated in the eastern states during November with an authorized capital of $1,000,000 or more:

	1907	1906	1905
January	$267,340,000	$411,945,000	$116,250,000
February	210,700,000	202,650,000	98,600,000
March	195,050,000	105,374,000	192,645,000
April	134,250,000	232,080,000	183,111,111
May	122,250,000	135,300,000	249,250,000
June	165,450,000	242,240,000	232,150,000
July	85,300,000	69,200,000	61,315,000
August	64,250,000	109,153,000	86,125,000
September	76,000,000	167,750,000	167,400,000
October	79,100,000	138,350,000	120,950,000
November	44,300,000	227,950,000	50,000,000
Total, 11 mos	1,443,990,000	2,041,980,000	1,554,796,111

The following table shows the quantity and values of crude cacao, coffee and tea, respectively, imported into the United States in each fiscal year from 1900 to 1907, three figures being omitted:

	Crude cacao		*Coffee*		*Tea*	
	Pounds	*Values*	*Pounds*	*Values*	*Pounds*	*Values*
1900	41,746	$5,657	52,467	$787,901	84,845	$10,558
1901	45,924	6,472	63,004	857,018	89,806	11,017
1902	51,379	6,656	71,125	1,092,344	75,579	9,390
1903	63,351	7,820	60,146	923,253	108,574	15,659
1904	72,277	8,873	69,988	998,677	112,905	18,229
1905	73,815	8,577	84,710	1,046,028	102,705	16,230
1906	80,117	8,697	73,514	853,799	93,621	14,580
1907	92,249	13,376	78,382	986,505	86,368	13,915

Kansas farm products, including wheat, corn, oats, hay and live stock, in 1907 show a net increase of nearly $40,000,000 in value over any previous year. In only one year since 1890 have Kansas wheat growers received so much a bushel for their wheat as in 1907, when it averaged 76 5 cents, the whole amounting to $56,787,512, or $1,608,801 more than that of any preceding year. Not in twenty-five years, excepting 1901, has Kansas corn been worth so much a bushel. This year's farm products, including live stock, reach the unprecedented value of $463,648,606, or $39,313,739 in excess of the best prior year, which was 1906. This increase is chiefly from live stock, which were worth $15,752,000 more than a year ago. The value of the state's live stock on hand is nearly $20,000,000 greater. The value of Kansas farm products apportioned equally among the state's inhabitants would make a credit for each of $280.

By the conditions under which Russia is admitted to the sugar convention that country is empowered to export a maximum of 300,000 tons from December 1, 1907, to August 31, 1909, and 200,000 tons during each succeeding year until August 31, 1913, with the understanding, however, that the total exportation during the whole period must not exceed 1,000,000 tons. Russia agrees not to export into Germany or Austria-Hungary, as the supply in those countries is in excess of the demand, but as an offset to the loss of this market is authorized to export any amount into Finland and Persia. Russia is permitted to retain her fiscal and tariff legislation relating to sugar on condition that she does not give her producers advantage in the nature of a bounty.

The Ohio crop report makes the condition of wheat December 1, 80, against 82 in November, and 98 in December, 1906. Low condition is due to late seeding and unfavorable weather. Corn crop 102,200,000 bushels, being 25,000,000 less than in 1906. Quality below average. Much of it is soft and unmerchantable. Report says 43 per cent. of 1907 wheat crop sold from threshers.

The N. K. Fairbank Company gives the following estimates of the stocks of lard held in the United States, Europe and afloat therefor on December 1, with comparisons: December 1, 1907, 134,483 tierces; November 1, 1907, 198,439; December 1, 1906, 189,981; December 1, 1905, 185,751; December 1, 1904, 189,690; December 1, 1903, 130,005.

The London *Economist*, after an investigation as to the outlook for British trade in 1908, reports that "there is a feeling that the boom is passing, and that 1908 will be a less prosperous year than 1907. Almost every industry is hampered by dear money, and unless the strain is soon relieved, the industries which depend most on credit are likely to be subjected to a severe depression. Trades that are connected with the United States are already feeling the pinch, and others whose relations with America are less direct are certain to be affected in the future."

According to Beerbohm's last estimate of the world's wheat crop, the probable yield is put at 383,850,000 quarters, or 3,070,800,000 bushels, as compared with 441,580,000 quarters, or 3,532,640,000 bushels, last season.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News*: United Kingdom and Spain—The outlook for seeding is generally favorable, but there are occasional complaints heard. Supplies are fair. France and Italy—Seeding is about finished and the outlook is favorable. Supplies are liberal. Germany—The outlook is mostly favorable and supplies are increasing. Austria-Hungary—The outlook has been more favorable until the advent of cold weather yesterday, which caused apprehension. Prices are very firm and near an import level. Roumania—The weather is mild and favorable, and the outlook for the seedings is thought generally to be all right. Arrivals of wheat from the interior are moderate, and of corn fair. Russia—The weather in the south is rather more favorable. The crops in the east are bad, as much frost has occurred and there is no snow covering. Arrivals from the interior to ports of shipment continue very light, as the interior continues to bid liberally for wheat. Turkey—Good rains have fallen, which were beneficial to the crops. North Africa—The outlook is favorable. India—Latest advices are that drought continues, no rains having fallen. Argentine—In the northern districts the quality is only medium, while elsewhere the quality is favorable. Offerings of new wheat are liberal.

The French government has extended until January 1 the decree which permits Porto Rican coffee to come into France upon payment of the minimum rate of duty. This step is taken in order to make possible the continuation of the negotiations between France and the United States for the conclusion of a definite commercial arrangement.

The average estimate of the cotton crop, made by 115 members of the Memphis Cotton Exchange, places the number of bales at 11,992,500.

A special commissioner of the American Humane Association has made a report of his investigations, extending over a year, into the condition of live stock on the ranges in the west. His report has been prepared for the purpose of "arousing the American people to the necessity for action to stop this wanton slaughter of thousands of domestic animals each year." Government reports are cited to show that for the year ending March 31, 1905, there was a loss of 2,687,027 cattle on the western ranges, due largely to starvation and exposure. The commissioner asserts that the losses each year are at least 2,500,000 animals, representing an estimated value of $24,000,000.

The first snow map of the season showed a line of snow covering at 8 o'clock Monday night general throughout New England, New York, Pennsylvania, western Maryland, northern Ohio, Indiana and Illinois, and general in the lake region; the depth of snow in New York state was from three to six inches, and in the lake region from three to nine inches. There were about two inches of ice at Duluth. No ice was reported at the Soo or at Alpena, Michigan.

The government report on the condition of the new wheat and rye crops and the acreage of the new crops will be issued Monday, December 9, at 1 o'clock. On December 20, at 1 o'clock, the final estimate of the principal grain crops of the United States, acreage and value, will be issued.

Financial.

According to the Richmond *Times-Dispatch*, "the banks of that city have more money on deposit than they had sixty days ago. The deposits in some of the banks, if not all the banks, are larger than ever before in the history of Richmond banking. The Richmond banks are meeting all demands in cash. Farmers who bring their tobacco and other products to this market will be paid for them in cash."

The *Journal of Commerce* estimated that the interest and dividend disbursements paid on December 1 called for about $73,200,000, as against $75,000,000 in December, 1906. Of the grand total this year interest payments call for $36,000,000 and dividends for $37,551,775.

The net debt of the city of Boston at the close of the last fiscal year was $111,848,735, an increase of 111 per cent. within the past twelve years. The debt now amounts to 8½ per cent. of the assessed valuation and to $183 per capita of the estimated population.

The Calumet & Hecla Mining Company has reduced its quarterly dividend to $10 a share, payable on December 24 to holders of record on December 3. The last disbursement amounted to $15 a share, on September 28 last.

Governor-General Smith, of the Philippines, on Wednesday cabled Major McIntyre, acting chief of the insular bureau of the War Department, to the effect that the last $1,000,000 of Manila sewer and water works bonds will not be offered for sale on January 1 next as was originally contemplated. They will not be put on the market until July 1, 1908. Already $3,000,000 of the $4,000,000 authorized have been disposed of, but the work has not progressed sufficiently to demand the sale of the remaining $1,000,000 at the present time.

The directors of the Newhouse Mines & Smelters have deferred action on the quarterly dividend. Last July an initial quarterly dividend of 50 cents per share was declared.

Bank clearings at Peoria, Ill., in November amounted to $7,104,000, which compares with $13,300,000 in November, 1906, the decrease being 46.6 per cent. The shrinkage was caused by the fact that the distillers, who had heretofore paid their internal revenue taxes with certified checks, were under a recent ruling of the government compelled to pay such taxes in cash. Under the existing condition of affairs the distillers were unable to get sufficient currency, hence internal revenue payments in the first part of November fell to practically nothing.

On Tuesday the directors of the Granby Consolidated Mining, Smelting & Power Company, Ltd., postponed action on the quarterly dividend. The company has been paying quarterly dividends of 2 per cent. and 1 per cent. extra.

The returns from the stock-transfer tax law during the month of November amounted to $219,173, a loss of $152,047, or 40 per cent., from October, and a loss of $320,547, or 59 per cent., from November, 1906. The amount received for the eleven months ended with November is $3,604,755, against $5,984,120 for the similar period last year, a loss of $2,379,365, or 39 per cent. The monthly average is $327,705, against $571,721 last year.

The value of the coins executed at the mints of the United States during November, 1907, was $35,963,260, of which $33,840,060 was gold, $2,002,000 silver, and $121,200 minor coins.

It is stated that some of the large savings institutions in New York are waiving the full notice of withdrawals. Some depositors who gave notice on November 1 of a desire to withdraw their savings have been notified that the money is available for them. There has been no general official notice of the change in policy, but where it is shown that the funds are needed for legitimate and urgent needs, and are not concerned in any plan to obtain premiums from currency brokers, they can be obtained. It is also understood that a considerable amount of funds hastily withdrawn from national banks by savings banks officers to meet the extraordinary demands of the panic period, have been restored to the banks.

Industrial.

According to statistics published by the United States Geological Survey, the total value of the pottery products of the country for 1906 amounted to $31,440,884, a gain of $3,521,990, or 12.62 per cent., over the figures for 1905.

The Labor Department of the British Board of Trade reports that employment in October was, on the whole, not quite so good as in September. In the 272 trade unions, with a net membership of 638,788, making returns, 30,079, or 4.7 per cent., were reported as unemployed at the end of October, 1907, compared with 4.6 per cent. at the end of September, 1907, and 4.4 per cent. at the end of October, 1906.

Lloyd's Register states that during the quarter ending with September there were 450 vessels of a gross tonnage of 1,080,100 tons under construction, compared with 1,264,000 tons in 1906. There is also a decrease in the average tons per ship.

A Berlin (Germany) report to the New York *Sun* says there is some alarm lest the hordes of returning emigrants without money will critically glut the already overcrowded labor market in Germany. Labor organizations are greatly troubled over the prospect of an influx at a time when the question of employment is acutely difficult. Commodities, even the barest necessities, are rising to almost famine prices. It was stated at a meeting of the municipal council of Schoeneberg, a suburb of Berlin, Tuesday, that there were 30,000 skilled and 35,000 unskilled workmen idle in Berlin alone. A proportionate number are idle in other industrial centers and in the farming regions. The trades unions have already been compelled to cut in half their doles to the unemployed. Similar conditions prevail in Austria, to which country more American emigrants have returned in a fortnight than departed. The prices of food are rising and troubles are feared.

A summary from nine southern and southwestern states shows that on November 29, 328 lumber mills had reduced their production by 203,070,000 feet. Stock on hand was 1,216,960,000 feet, and the net amount of stocks above normal was 207,888,000 feet. These returns, though not complete, may be taken to represent the general condition of the lumber industry in the territory from which reports were received. The figures are in thousands of feet, with three figures omitted:

	Mo. dec. in prod.	*Stock Nov. 1, '07*	*Above normal*	*Below normal*
Ark., Mo. & Okla.	36,187	302,338	54,550	20,454
Texas	55,524	299,656	56,000	17,846
Louisiana	80,111	435,172	117,866	25,846
Alabama	10,174	60,123	13,455	3,115
Mississippi	16,299	96,645	24,843	3,325
Georgia & Florida	4,770	28,034	4,700	30
Total	203,070	1,216,968	271,504	63,616

Trade conditions, as compiled from 133 replies, show that inquiries for lumber products are generally light.

Railroads.

J. J. Hill states that, in the opinion of competent judges, probably 50 per cent. more money than his estimate of a year ago would have to be spent annually by railroads for the next five years to come. Mr. Hill's former estimate was $1,100,000,000 a year for five years.

Consul-General William H. Michael, in the following report from Calcutta, shows the desirability of the American railway train system in India: "In consequence of recent murders, robberies and other outrages on trains in India, the Eastern Bengal State Railway has ordered electric alarm bells to be installed in the cars of their line, so that passengers may communicate with the guards on the train. It would appear that the only effectual and practical remedy is the substitution of cars built on the American plan, with open ends and vestibule connection, for the side-door arrangements used in India. The English passenger cars, or carriages as they are called, which open at the side, are not suitable for India."

Miscellaneous.

The population of the world in 1800 is estimated at 640,000,000, as compared with 1,600,000,000 in 1906, an increase of 150 per cent. in a little more than 100 years.

The Mutual Life Insurance Company will write no more policies in Wisconsin after December 31. The new insurance laws of Wisconsin are responsible.

During November the total excavation on the Panama canal amounted to 1,838,486 cubic yards, as compared with 1,868,729 cubic yards in the previous month. The rainfall for November was 10.73 inches and there were only twenty-four working days in the month, which partly accounts for the decrease in excavation. The total excavation in November of last year was 389,407 cubic yards. The average daily excavation for November was 76,600 cubic yards, as compared with 68,314 cubic yards in October.

In the census report on cities of 30,000 population and over, the sources of general revenue are analyzed and the exhibit shows to what extent American cities still depend upon general property taxes and other sources for their income. General property assessments in 154 cities furnish 80.5 per cent. of the general revenues. The portion derived from these and other sources is compared in the following classes of income:

Source.	*Per cent.*
General property taxes	80.5
Special property and business tax	2.6
Poll taxes	.03
Liquor licenses and taxes	7.7
Other licenses and permits	1.9
All other receipts	7.0
Total	100.00

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Improvement is still largely confined to financial matters, notable in this respect being the increased ease in call money, some lifting of the embargo on time loans, advancing prices for both bonds and stocks, and a lowering of the currency premium after a sudden advance, due to "window dressing" necessities on the part of some banks. Accompanying these developments, however, has come an accentuation of the more confident feeling noted in general trade lines and in a few industries, further reinstatement of orders canceled in a panicky way some time ago, some renewal of buying for quick shipment from jobbers, and, where more seasonable weather has permitted, as in the northeast and south, some stimulation of the demand at retail for winter apparel and for holiday specialties. At best, however, trade as a whole is still very quiet, and industrial activity is below the normal for this season of the year.

As to banking matters, the situation has undoubtedly improved greatly, and this is said, too, with full appreciation of the fact that two large interior banking concerns were this week forced to suspend. This latter development is, however, regarded largely as a case of wreckage coming ashore after a storm known to have been very destructive, but actually past and gone. Favorable sides to the situation are many and various. Several cities report that the issuance of Clearing House certificates, or emergency currency, has been suspended, others report that currency payments are quite general, and the feeling is that the payment of money over the counter will soon be quite generally resumed. Partial confirmation of this is found in the reports coming in from many cities, in answer to the call of the Comptroller of the Currency, that the banks generally are holding reserves considerably in excess of the normal or legal requirements. These percentages vary from the legal ratio up to as high as 55 per cent. New York City's national Clearing House banks are expected to show somewhat less than the legal requirements. With this showing made and published, a much more confident feeling and a return of hoarded money to trade and speculation is looked for.

Collections are still very backward the country over. Call money is easier, some time loans are offered, but the mercantile paper market is dull and lifeless. A distinctly new feature, however, is the report from St. Paul that some eastern time money is being offered there, the first since August last. Monthly and weekly clearings returns point to the combination of unfavorable past and present circumstances limiting payments through the banks to the smallest totals in three years. Failures for November were more numerous, but liabilities were not nearly as large as in October, in which month the crisis really passed. Failures for the week are the most numerous since January, 1907.

In strictly trade lines it is to be noted that there has been a slight rallying tendency shown in many commodity prices from the abnormally low levels touched at the depths of the depression in November. Another feature is the number of reports of reawakened interest in some lines of cotton goods, which a short while ago were being neglected. For one thing, there is some sign of life in export trade in cottons, cotton yarns are steadier than of late, and this, with reinstatement of orders from interior buyers and the strength of raw material, has helped to a much more confident feeling than existed a short while ago. Openings of low-priced woolen goods for the fall of 1908 have evoked fair orders, and wool is also better in tone, so far as fine staples are concerned. Cold weather and snow have not been equally distributed, and many western centers report retail trade lagging because of unseasonably warm weather. On the other hand, trade at the north and east has been helped slightly by real winter weather, which has also stimulated holiday business. At the south, cool weather and a slightly larger movement of cotton have also helped. It is noted, however, that holding of cotton for higher prices is common, and the additional fact is brought out that in some sections 10 per cent. of the crop still remains to be picked. Crop estimates are inclined to expand.

For the first time in months buyers are evincing more interest in pig iron for future delivery, the inquiries being most numerous in the south. Prices, however, are lower, as low as $14.50 being named for No. 2 southern foundry at Birmingham, and $19 for Bessemer at valley furnaces, which probably could be shaded, and $17.50 for basic in the valleys. Production is still being curtailed, and it is figured that most of the furnaces in the Mahoning and Shenango regions will be out of blast by the middle of this month. The output in November declined 23 per cent. from that of October, but this ratio does not begin to represent the curtailment wrought thus far in December. Some steel plants have resumed operations, but others have discontinued. Wages are being reduced. No new business is being done in steel rails, but it is persistently reported that the railways will soon come into the market for large tonnages. Structural material is in moderate demand, and some relatively heavy business is pending. Lower prices for finished iron and steel are expected to come without causing any marked unsettlement. Wire products are in good demand, and the situation as regards tinplate appears to have improved; the leading interest is operating only 20 per cent. of its capacity. Ore shipments for the season are expected to aggregate 42,500,000 tons, on which basis the increase over last year's movement would be 10 per cent. Old material continues to decline. Coke production is being restricted and wages will be sharply reduced. Pig tin is in very light demand and prices are lower. Spelter and lead are easier. Copper continues inactive, but prices are no lower, although the undertone does not appear to be so firm, and European interests seem to be more anxious to force sales.

The lumber and allied building material trades are rather dull, building is restricted, and a short cut is looked for in the forests this winter, especially as choppers' wages have been cut. Wage reductions are noted in a number of lines, and the emigration movement to Europe taxes steamship capacity. Iron and steel are evincing more interest as to future deliveries, but prices are easier, production is still being curtailed, and a buying movement would probably find the market quite bare of offerings. A rather more confident feeling is noted in the leather trades, though only high-grade sole leather is firm. Shoe manufacturers report some quick-delivery orders received, and requests that goods previously ordered but canceled be now shipped.

The price movement has been rather irregular this week, with wheat seeking a rather lower range, and coarse grains showing more strength than for three weeks past. Wheat weakened early on rather poor reports from consuming markets and unsatisfactory export inquiry. At the low point of the week—Wednesday—prices were about 2 cents below last week's close. At the decline export inquiry was rather better, and poor crop reports from Argentina caused a slight rally. Corn and oats advanced 2@3 cents on good cash inquiry, small stocks and light receipts. Provisions strengthened further, continuing the reaction noted late last week from the very low levels touched for live hogs. Light receipts of live animals and better cash inquiry were additional features making for strength. Coffee futures are 25 points higher, but spots show no gain. Sugar shows little change, but sentiment has improved with a slight hardening in values.

Cotton has continued to gain strength and is now a full cent above the low levels touched at the depth of the financial depression. Light receipts, rather better goods-trade reports—advices being of reinstated orders for goods canceled earlier and of mills resuming work—and, above and beyond all, renewed aggressiveness on the part of bulls, who are emboldened by the improving tone of the security markets, were all elements in the advance. Toward the close of the week, after an advance of 20 to 25 points in spots and futures, there appeared some rather larger than expected crop estimates, 12,000,000 bales being specifically mentioned. Prices, however, increased their gain and closed 20 points higher on spots and 40 to 50 points higher on futures. One really encouraging feature of the week in the goods trade has been the reported sales of large quantities of cotton goods for Red sea ports. Lower quotations here have apparently revived the trade in this direction after a year of almost total absence, due to foreign manufacturers underbidding American mills. The cotton-yarn market also shows signs of steadying, and altogether the feeling in finished lines is better than for six weeks past. Wool has gained in strength, with some slight increase in inquiry on the improved financial situation, easier money, and the firmness of foreign markets on all good grades of wool. As to the latter, it might be stated that while fine wools have generally advanced abroad, low grades are easier.

While the farmer is getting good prices for his grain, the reverse is true of his live stock. At the International Stock Show in Chicago this week, the top prices for carload lots of cattle were $8 per 100 pounds; a year ago the price was $17. Hogs brought $5.75, against $7.10 a year ago; yearling sheep, $6.25, against $7, and lambs, $8, against $11.25.

The New York securities market gained in activity and strength during the week, the reactions being brief and the covering of the extended short interest giving an excited appearance to the rise in quotations. The prevalent feeling in Wall street is that normal conditions are being rapidly restored and that the market is justified in discounting them. Bonds are notably active, with decided rises in active issues. Foreign exchange is strong at 4.86.70 for demand sterling, though the inquiry for gold-importing purposes has decreased.

November bank clearings reflect a combination of unfavorable circumstances in an aggregate at ninety-four cities of $9,568,632,733, a decrease of 30.1 per cent. from October, and of 29.2 per cent. from November a year ago. New York City's clearings fell 32.8 per cent. from October, and 36 per cent. from November, 1906, while outside of New York there was a decrease of 24.8 per cent. from October, and of 17.3 per cent. from November a year ago. Every group of cities shows a decrease from November a year ago, but every group except that of the middle states cities shows a gain for eleven months, though the clearings for the whole country, owing to the loss of 14.2 per cent. at New York, are 7 per cent. smaller than those of 1906.

Business failures were more numerous in November than in October, 1907, or November a year ago, and liabilities were more than three times those of November, 1906, but only one-fifth those of October, because bank suspensions were fewer and less important, indicating that the crisis really passed in October. There were 1,108 failures for November, an increase of 14.2 per cent. over October, and of 36.8 per cent. over November a year ago. Liabilities in November aggregated $31,409,845, or less than one-fifth those of October, though three and one-half times those of November, 1906.

Bank clearings for the week ending December 5 aggregate $2,471,883,000, 43 per cent. over last week (a holiday period), but 30.7 per cent. under this week last year. Outside of New York exchanges amount to $1,017,157,000, a gain of 36 per cent. over last week, but a loss of 21 per cent. from the week last year.

Business failures for the week ending December 5 number 272, against 258 last week, 216 in the like week of 1906, 203 in 1905, 123 in 1904 and 241 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending December 5 aggregate 6,192,241 bushels, against 5,459,324 bushels last week, 4,791,020 bushels this week last year and 4,604,846 bushels in 1901. For the twenty-three weeks of the fiscal year the exports are 96,675,060 bushels, against 83,585,713 bushels in 1906-07 and 131,686,119 bushels in 1901-02. Corn exports for the week are 1,187,276 bushels, against 710,182 bushels last week and 1,109,477 bushels in 1906. For the fiscal year to date the exports are 21,664,349 bushels, against 19,462,743 bushels in 1906-07.

IN CANADA.

Wholesale trade is quieting down as stock-taking time approaches, but there is a fair reorder business doing, owing to the stimulating effects of cold weather. Retail and holiday trade is good, and the latter is expected to be large. No complaints of cancellations are heard in wholesale and jobbing lines. Collections as a whole are classed as fair. The money situation is still rather strained, but signs of improvement are to be seen. Grain is moving well at the northwest. There were 152 failures, with liabilities of $1,693,553, in Canada in November, an increase of 25.6 per cent. in number and of 79 per cent. in liabilities as compared with November, 1906. Canadian clearings for November aggregated $389,839,301, and for eleven months were $3,855,798,035, a decrease for the month of 3.7 per cent., but a gain for the eleven months of 7.9 per cent. There were 26 failures for the week, as against 46 last week and 32 in this week a year ago. Clearings for the week aggregate $89,707,000, an increase of 8 per cent. over last week, but a decrease of 7.5 per cent. from this week a year ago.

TRADE REPORTS.

Business in dry goods at New York is dull. Resident buyers for out-of-town firms are acting very carefully, and many requests have been made to cancel spring orders, but have not been accepted. While there is a fair demand for cotton goods, the same time prices are not so strong as formerly. Silks continue in fair request, but owing to the failure of a large silk company, buyers are holding off for the receiver's sale. Woolens for men's wear are in very poor demand. The clothing trade reports a fair amount of business. Collections generally are not any worse than they were. The cotton-yarn market is steadier. Buying is not yet general, and manufacturers, as a rule, are placing orders only for immediate needs. Worsted and woolen yarns continue in good demand. Business in cloaks, suits and waists has improved considerably, and it is expected by conservative manufacturers that this improvement will continue. Out-of-town buyers are placing larger orders, and collections are somewhat better. Retailers in these lines report a steady increase, due to the holiday trade. Manufacturers of shirts, gloves and neckwear report a falling off in sales, but the volume of business transacted for the year is in excess of that of 1906. Large orders for spring goods have been received, but in some cases cancellations have been asked for, and in others a request has been made that the goods be held back. Collections are slower than usual, and conditions, on the whole, are not very satisfactory. In wholesale notions sales have declined, and there is a general disposition to buy only what is necessary. In the

hide and skin market a better feeling prevails, and dealers look for an improvement within a short time. Manufacturers who have been closed down are preparing to resume, although they do not expect to do so with a full force for some little time. The shoe trade reports moderate sales. Retailers are believed to be carrying very little surplus stock. Wholesale grocers say business is quiet, some orders being canceled or cut down on reports of discharged employees. Conditions in the live cattle and dressed meat trades have improved, the reduction in price having stimulated trade. Butter is in fair demand. Receipts of fresh eggs continue light, but storage eggs are moving freely. The market for poultry is weak on heavy receipts. Flour receivers say sales are smaller in volume and arrivals curtailed because of difficulty in financing. Wheat conditions maintain prices fairly steady. Business in the hardware and cutlery trades is quiet, but collections are fairly good. Curtailment of production is the general order with manufacturers. Similar conditions obtain in the tin and enameled ware trades. Pig tin, copper and pig iron are inactive, especially copper, for which there is little demand. Both electrical and machinery manufacturers report business quiet and collections slow. In automobiles the import business seems to have increased, as during November, 1907, 145 cars were brought into the country, as against seventy-five in November, 1906. Business in jute cordage is very dull, and in many instances prices have been reduced 1 to 1½ cents a pound. There is not much doing in leaf tobacco, but manufacturers of cigars report a slight improvement. Money to pay duties and workmen is still scarce, and some factories have been obliged to lay off hands in consequence. Orders are being received, but they are not so plentiful as they should be at this season. Window glass at wholesale is only in moderate request. Several plants in the state of West Virginia have banked their fires pending a satisfactory agreement with the workmen. In real estate comparatively few sales are reported. For paper the demand is less, and while prices have not changed, manufacturers have reduced outputs. Manufacturers of confectionery are filled with orders, and while collections are slow, there is some sign of improvement.

The following telegrams show trade conditions at the cities mentioned for the week ending December 6:

BOSTON.—Jobbers in paper are inclined to work off old stocks rather than add to supplies by new orders. The mills in general, however, still seem to have orders ahead, and very little curtailment of production is reported. Trade continues quiet in upholstery, carpets and furniture, and collections show no improvement. Electrical supplies are in fair demand, but business is below normal. Lumber shows no material change, being generally dull. Southern lumber is lower. The glass people are still bothered by labor troubles, and there is nothing new in paints, except a further drop in prices of turpentine and linseed oil. Bricks, cement and lime are affected by dullness in building. Anthracite coal is in fair demand, but cold weather is needed to stimulate business. Bituminous prices are becoming more reasonable. Retail trade is fair, considering the weather. The majority of local produce and poultry dealers report a good Thanksgiving trade, and jobbers who disposed of their stocks before the break in the market received substantial profits. Wholesale grocers report business and collections not up to the average.

PROVIDENCE.—Machinery and tool manufacturers report a quiet business. Jewelry is very quiet, though there are some individual cases where there is a little more business reported than last week. The lumber trade is dull, and retail trade is fair. Collections are slow.

PORTLAND, ME.—The sardine packing season is closed. The pack, which was large, has been well sold out at profitable prices. Holiday trade has begun and bids fair to be normal. Factories which closed or reduced operations a few weeks ago are resuming. Wholesalers are preparing for stock-taking. Trade conditions are improving. The disposition in banking circles is to treat creditors leniently. Winter steamship business has begun and bids fair to be large.

PHILADELPHIA.—Business is quiet in textiles. Manufacturers are curtailing production and buying little for future use. The supply of desirable wools is low, and while there is little trading, prices rule firm. There is little business being done by dry-goods jobbers, retailers' ideas being to dispose of present stocks and defer replenishing till compelled to do so. The larger retailers are apparently doing the usual seasonable trade. Shirt manufacturers are carrying large stocks and waiting orders to ship. Cloaks and suits are dull. Large stocks of hides are being carried and weak prices prevail. Goatskins continue weak. Glazed kid shows inactivity. Leather shows a brisk demand for heavy sole leather, with good prices and fair stocks. Tanners have curtailed for some time past, and demand for other leathers is only fair. Shoe dealers report somewhat increased business in seasonable lines, owing to weather conditions. Flour prices are too high for brisk business, small bakers being unable to adjust themselves to prevailing conditions, and the market rules dull and unsatisfactory. In chemicals and dyestuffs no business is offered. Paints and glass are becoming rather draggy with the advance of the season, but manufacturers and jobbers are very well satisfied with the year's business. Lumber is slow. Manufacturers are accumulating stocks, and wholesalers are resting. Retailers are trying to reduce stocks. Prices are fairly firm, though there is a disposition to "cut" observable in some quarters. Cement is in an unsatisfactory condition, stocks are hard to move, and prospects of improvement not encouraging. House furnishing business is expected to reach the figure made in 1906, as a very fair demand has set in. The holiday demand for jewelry is quite active, and business is equal to prior years. Tobacco, usually slow of sale at this season, is still more so this year; even orders given for January delivery are withheld, buyers promising to order early next year in expectation of a more settled condition of affairs by that time, and what little is sold now is for immediate use. Liquors are dormant, conditions being such that those who might offer goods would have to sacrifice them, and the return to normal conditions seems so near, they wait, and prices are not broken. The larger part of the cost is in revenue tax, which must be paid in cash, and that also has an adverse influence. Inquiries for future delivery of iron and steel are more numerous, but, on the whole, the situation is pretty much what it has been. Furnaces are being blown out and a quiet readjustment of conditions is in process. Collections are said to be somewhat easier. The coal market is very active and prices are firm. Steam grades of anthracite have been advanced 10 to 15 cents a ton. Supplies seem to be equal to the demand, and no complaints are being heard about transportation facilities. Monetary affairs show less tension, owing to favorable showings made by banks to Comptroller of Currency. Gradual liquidation of bank loans is curtailing general business. Currency is now in fair supply, and the elimination of the premium aids the restoration of confidence. Commercial paper is selling more freely through brokers at 7½ to 10 per cent., purchases being made largely by interior banks, who appear disposed to invest from an unusual surplus of funds. Bankers are discounting customers' paper at 6 per cent. within reasonable limits, but appear to anticipate more or less liquidation of loans. There is small demand for call loans at regular rate of 6 per cent.

PITTSBURGH.—Pig iron continues stagnant adn there is practically no buying or selling. Further curtailment of production is under way, and by the end of the month there will likely be an entire suspension of operations, which will prevent the accumulation of any more stock than is needed to safeguard existing contracts. In finishing departments there appears a somewhat better feeling, but it cannot be said that there has been any appreciable improvement, and not much is expected until after the first of the year. Coke output is being decreased and prices of furnace coke are weaker, while foundry-coke prices are being well maintained. Quotations for pig iron at the valley furnaces for immediate delivery are lower, and are nominally as follows: Standard Bessemer, $19; chilled basic, $18; gray forge, $17.50, and No. 2 foundry, $18. Standard Connellsville furnace coke is quoted at $1.75 to $2, and foundry coke, $3.25 to $3.50, at the ovens. Trade in dry goods still keeps up and collections seem to be improving. Orders for lumber have fallen off to a great extent and collections are very slow. Notes are being given in many instances. Currency is very scarce. Owing to open weather the shoe trade is very light, but collections have been very satisfactory. Orders for hardware are falling off to some extent, though trade is fairly brisk, and collections are still satisfactory, but with a tendency to ask further time.

BUFFALO.—Some wholesale and jobbing houses report the volume of trade larger for November this year than last. Retail trade remains about normal. The stringency in money remains about the same, and collections are no better.

BALTIMORE.—Trade, jobbing and wholesale, is unusually quiet. Collections are a little better. Confidence is expressed in southern mercantile circles. A freer movement of cotton is expected to follow the issuance of the government report. Country trade is quiet. This condition is expected to continue until after stock-taking. Mild weather has retarded sales at retail in the country districts. Locally, however, seasonable weather has materially helped business. Increased holiday sales are expected. Harness manufacturers report current business of small volume, but they are busily engaged in shipping spring orders. Hardware is quiet. Collections are fair. Wholesale business in paper and stationery is of moderate volume; prices are firm, but collections are very slow, and mill deliveries are easy. Scarcity of raw material has caused advances in woodenware, deliveries of which are backward, while demand is brisk, but collections are slow. Lumber is quiet. Exports of wheat are larger than for several years, and charters for shipment the next few weeks aggregate several million bushels. Exports of flour also show an increase over 1906. The southern corn crop, which has been slow in coming to market, is not of as large volume as last year. December bank statements at Baltimore show a material increase in loans and discounts since August 22, but the statement, on the whole, is regarded as a very fair one. Favorable mention has frequently been made regarding the banks' treatment of customers, particularly as to deposits upon which they have been permitted to check. The situation is much easier, and with the advent of the new year a steady and material improvement is confidently looked for. Baltimore has had but few failures of note during the financial stringency.

CLEVELAND.—Wholesale trade in groceries and articles of consumption generally is fairly active, but in other jobbing merchandise lines the volume is comparatively moderate. Manufacturers' orders continue light, with operating expenses curtailed correspondingly. Retail trade is quiet. Collections are slow, but with financial conditions in better outlook, the commercial situation generally is regarded as more encouraging.

CINCINNATI.—Jobbing in all lines is quiet, and manufacturing plants are operating with about half the usual number of workmen. Collections are slow. Department stores report holiday business only fair. The call for a statement of the condition of national banks at close of business December 3 shows the financial institutions here to be up to expectations, and it is evident that the resumption of business on normal lines is expected at an early date. Nearly all of the twenty-seven banks here show more than the necessary 25 per cent. reserve required. Money is quoted at 6 per cent., but few loans are being made at that figure. Bankers say the outlook is good.

CHICAGO.—Increased sales of dry goods and holiday goods at wholesale and retail this week are due to the large influx of out-of-town buyers who came to the International Live Stock Show. Sales are, however, below the normal for this season. Manufacturing interests continue curtailment of forces and output, due to the falling off in new buying. The disposition is to buy as little stock as possible until after the first of the year. Consumers as a rule are carrying moderate stocks, and manufacturers, not having bought raw materials of late, are using up old supplies. This continued consumption of supplies is expected to be soon felt, as all will have light stocks and be forced to buy. Decreased output of all iron furnaces here and limited buying of pig and finished iron and steel continues, but there are orders in sight for 50,000 tons of structural steel for local use. Sales of coal are increasing, and cars and labor are abundant. In lumber trade is slow, with indications of reduced output of logs, as wages of choppers are cut 40 per cent. In other lines buying is restricted to actual requirements. Butter, eggs and potatoes show little change in values, with supplies ample. Cattle prices are easier; hogs are higher and sheep lower. Receipts of cattle decreased slightly and hogs and sheep increased. Top prices for carload lots of International Show stock in Thursday's auction: Cattle, $8; hogs, $5.75; yearling sheep, $6.25, and lambs, $8. Tops a year ago: Cattle, $17; hogs, $7.10; wether sheep, $7, and lambs, $11.25, all per 100 pounds. Financial conditions are getting better in Chicago, but bank failures in the southwest have created some uneasiness here. Most Chicago banks are nearly on a currency basis, and some are ready to resume. Currency shipments in November were $13,674,000 and receipts $26,027,740. The latter, from eastern banks, were the largest on record. There is no regular money market, although this week has found the banks nearer a normal condition than for two months, loans being at 7 per cent. on call, 7 to 8 per cent. on time, and no rate for discounts. National banks on December 3 had loans of $222,533,474, an increase of $11,279,954, or 4 84 per cent.; deposits, $298,007,130, a decrease of $30,946,519, or 9.4 per cent., and cash resources, $119,311,201, a loss of $8,647,760, or 6.81 per cent., compared with August 22. Cash resources are 40 per cent. of liabilities. Combined statements of national and state banks were: Loans, $446,348,300, a decrease of $41,054,728; deposits, $638,755,622, a decrease of $61,117,338, and cash resources, $221,651,148, a decrease of $5,958,086. Percentage of cash means to deposits, 34.72 per cent. Over 50 per cent. of the notices of withdrawal of savings deposits have been canceled, and some of the banks are securing a small increase in savings deposits. Collections are rather slow.

TERRE HAUTE.—Unexpected slackness in the operation of coal mines is being experienced in some districts. The cause is assigned to continued pleasant weather and the money flurry, which has occasioned reduction of operations in plants that are large users of coal. Miners are beginning to feel the effect. Retail coal trade is more active and orders are coming in fast enough to create lively business. Conditions are such that higher prices are not expected. The financial situation is clearing and cash is produced for pay rolls. Manufacturing concerns are resuming, but are not yet running at full capacity. Banks here made a creditable showing in response to the recent call. A leading prepared cereal plant, which was destroyed by fire some few months ago, is being refitted with new machinery. Retail lines are experiencing early and satisfactory sales.

LOUISVILLE.—Business continues dull. Demand for whiskey shows a little improvement, and a number of local dealers have been forced to buy currency from the east to pay taxes. The price delivered here has been about 2 per cent. Pig iron is extremely quiet. Hardware jobbers report fair trade, but not up to last year. Dry-goods jobbers have about finished their year's business, and few salesmen are out. The banks report financial conditions easier, and hope soon to do away with Clearing House certificates and go on cash basis. Collections continue slow.

ST. LOUIS.—Conditions in general seem brighter. Jobbers of dry goods, notions, shoes, hats and millinery report orders for spring fully up to expectations, under the circumstances. Orders for immediate shipment also show improvement. Collections continue to improve and fewer extensions are being asked. Flour continues active at firm prices. Export trade, while of good volume, is not up to expectations. Lumber is exceedingly quiet at lower prices, likewise all grades of building materials. The approach of the holiday season has stimulated trade, and a good volume of business is being transacted at firm prices. In financial circles the situation appears brighter. Banks and trust companies are more liberal with cash payments, although the check system continues to some extent. Banks are taking care of their regular customers, though the rate of interest ranges from 7 to 8 per cent.

KANSAS CITY.—The failure of the National Bank of Commerce of Kansas City, after standing a steady drain in deposits aggregating $18,000,000, has not had a very serious effect on local financial circles. Merchants and manufacturers are making bank connections without serious inconvenience. Bank statements just published, pursuant to the call as to their condition on December 3, show local institutions to be in strong condition. A conservative policy is still maintained in making loans. Currency is more in evidence. Trade conditions show a steady improvement, but country collections are backward. Fewer cancellations of orders have been received, and jobbers in dry goods and kindred lines report a good volume of filling-in orders.

MILWAUKEE.—Retail trade is up to the average, but jobbing business is not so satisfactory, as orders are coming in rather slowly. Collections have improved and the financial situation is clearing.

DAVENPORT.—Retail merchants report some little improvement in trade, but business is still quiet and collections are slow. Fine weather affects trade in some lines. Clearing House checks are still in circulation.

SIOUX CITY.—Business is still light. Collections are very slow. Grain is moving more freely, and prices of cattle and hogs have increased, thus bringing more stock on the market. Weather is

warm and tends to decrease purchases in retail lines. Banks are easier in making loans to old customers. We still have cashiers' checks in circulation.

ST. PAUL.—Trade conditions are encouraging, and indications of returning confidence are manifest. Offers of loans from eastern points, which have not been heard from since August, have been made, although at a rate higher than it has been deemed advisable to take. Country merchants are promising remittances, and December is expected to be good for collections. The month is starting out well and about equals last year. Current business is dull and quite a number of cancellations have been received Spring shipments have begun and merchants in good credit are receiving their goods. General tone is easy, and, although no one is rushing business, the situation is well in hand, and manufacturers are figuring on supplying all orders.

MINNEAPOLIS. — Conditions are improving, though business in general would be stimulated by colder weather. Seasonable goods are not moving as freely as is desirable or as usual at this season. Staples in all lines are in good demand. Collections are very fair, though dragging in some localities. Grain shipments are coming in more freely than has been the case of late, but firmer prices would increase the movement. Flour trade is quiet, as is usual in December.

OMAHA.—Weather conditions are more favorable to trade in general. Country merchants are still backward in placing orders for future shipment, and, as a rule, are only ordering for immediate needs. Some improvement is noted in the movement of grain. Live stock business, however, continues quiet,

LINCOLN.—Jobbers report a fair trade for immediate shipment, while future orders are light. Collections are slow. Warm weather interferes with free retail movement, and large dealers are resorting to special discount sales.

SIOUX FALLS.—Trade at country points is quiet. Grain is moving, but little live stock is going to market. Collections are fair. Banks have resumed currency payments and no further trouble is expected.

CHARLESTON.—Wholesale trade shows a small improvement, and conditions in general look brighter. Collections continue slow.

RICHMOND.—As usual at this season, little is being done in wholesale dry goods. Manufacturers and wholesalers of shoes and rubber goods continue to receive satisfactory orders for spring shipment. Tobacco is more active, offerings are larger than at any previous time this season, and satisfactory prices are being received for all grades. In southern Virginia and North Carolina peanuts and cotton are being marketed in large quantities. Peanuts are lower in price than at this time last year, but cotton in most instances is higher. Lumber continues less active, but prices have been comparatively well maintained by curtailment of production. Produce and provision dealers look for better conditions in this line as the holiday season approaches. The supply of money is larger than for some time past, and merchants obtain accommodations with greater ease. Business conditions generally have a brighter outlook. Retail trade shows improvement with the approach of the holiday season. Collections show improvement, though they continue slow.

SAVANNAH. — Retail holiday trade is active. Collections are improving. Cotton is moving freely from the interior. Trading in naval stores is dull. Banks are issuing currency, and Clearing House certificates are being gradually withdrawn.

ATLANTA.—Christmas trade is brisk among retailers, and all report sales equally as large as those of last year. There appears to be a more cheerful feeling among merchants, and although several large manufacturing plants are still closed, and others are working on half time, it is stated that the suspensions are only temporary. Farmers and merchants still continue to hold large quantities of cotton for higher prices. Collections are reported good by retailers, but complaint is heard among wholesalers that they are slow.

AUGUSTA.—Trade shows a slight improvement. Collections are fair, and money is unchanged.

MACON.—Money is easier, collections are improving and Christmas trade is promising.

JACKSONVILLE.—No substitute for currency has been resorted to here, but tight money hampers trade. Lumber and naval stores are still depressed and collections bad.

BIRMINGHAM.—A demand for pig iron has improved. Some sales have been made at $15.25 per ton for No. 2 southern foundry. Other lines report some improvement, and a better feeling exists. The money stringency is looked upon as being only temporary. In fact the local banks are paying small checks in cash, and it is the general opinion that within a few days the Clearing House Association will retire the issue of scrip and pay all checks in currency. The property the United States Steel Corporation recently acquired from the Tennessee Coal, Iron & Railroad Company, at Ensley, Ala., is being improved. All the old employees have been reëmployed and the unfinished work carried on. Collections are fair. Jobbers and retailers expect the usual holiday trade.

MOBILE.—Jobbers report a slight improvement in business. Collections are a shade better. Conservatism in extending credit is displayed. The recent cold snap has stimulated retail trade, and Christmas shopping is quite brisk.

MONTGOMERY. — Some little improvement is noted in trade, but collections are poor.

CHATTANOOGA.—Little if any change is noted in jobbing lines. Manufacturing continues quiet. Weather conditions are favorable. Collections are only fair. Building is active.

MEMPHIS.—Wholesale trade is fair. Cold weather is stimulating retail business. Collections are slow.

LITTLE ROCK.—Jobbers are fairly busy with filling-in orders and retail trade is moderately active. Collections are improving. The movement of cotton is increasing owing to the advance in prices, but local receipts are only half as much as those of a year ago at this date. Only about 10 per cent. of the crop remains unpicked.

NEW ORLEANS.—Wholesalers are doing very little business. Collections are slow. Reports from some Louisiana points are favorable, considering present conditions, while from other localities complaints are heard. Weather conditions are fair for the farmer, and cotton picking is nearing its end. Retailers report a small increase in volume of trade, with fair prospects.

DALLAS.—Jobbing in all lines is quiet, purchases being confined to actual needs. Country retail trade is quiet, but in the city reduction sales are under way, and this gives considerable life to business. Holiday trade is opening fairly well and dealers anticipate a good business. Collections are slow, only about 50 per cent. of what they usually are at this season. Some cotton is being moved, but as a rule farmers are holding cotton for 15 cents. As far as paying out money on checks is concerned, the banks are in reality on a normal basis. However, no new loans are being made, and this of necessity curtails business.

FORT WORTH.—Improvement is noted in general conditions. Retail holiday trade is opening up actively. Jobbers, however, do not appear to be pushing business. Cotton is moving freely, which is a good indication. Collections are improving. Business in lumber remains at a standstill and building operations have been materially reduced.

WACO.—Trade is very quiet. Collections are slow. A good holiday trade is expected. Some little cotton is being marketed. Financial conditions are much easier.

SAN FRANCISCO.—Coin is being paid more liberally, and the issue of Clearing House certificates has been suspended. Rebuilding is steadily progressing and the new administration has already effected great improvement. Business is fair despite prevailing conditions. Goldfield mines are closed on account of labor troubles.

SEATTLE.—General conditions and collections show no improvement. Wheat is beginning to move. Many lumber mills assert they have large orders on hand, but they are still closed, awaiting the decision of Interstate Commerce Commission on freight rates.

SPOKANE.—Lumber is at a standstill, and machinery houses report business quiet. Other lines of trade are picking up, and collections are good considering conditions. Bank statements show the banks of the city to be in excellent shape. Wheat has begun to move quite freely.

TACOMA.—Statements issued by banks show an unusual amount of cash on hand. Wheat continues to move to tidewater, and exports are heavy. Although lumber is quiet, some of the logging camps will resume shortly. Collections are fair.

PORTLAND, ORE.—Jobbers report a disposition on the part of merchants to buy only for immediate requirements, but anticipate later orders. Lumber is still inactive, owing to unsettled freight rates. Collections are fair.

TORONTO.—Holiday retail trade is opening up briskly. Wholesalers report that ordering of novelties and general Christmas lines is heavy. Wholesalers are entering upon a quiet season and in many cases preparations for stock-taking are under way. Cold weather has given quite an impetus to the movement in winter lines, and there is already some sorting trade. The season in dry goods has been a good one, and wholesalers report they have reason to be satisfied with the way in which money has come in. The grocery trade is still active, although large shipments of holiday goods have been sent out. Canned goods are reported in short supply and prices are very firm Stocks of tea are light. The hardware trade is fairly brisk and the movement of sporting goods has been heavy. Short deliveries of country produce keep prices high. Deliveries of butter and cheese are increasing. Hogs are steady to firm and the demand for provisions is moderate. Hides are quiet and lower. Wool is easier, with business quiet.

MONTREAL.—Wholesale trade has taken on a quieter tone. Retail holiday trade is opening out well. Cold weather has started a good movement in winter lines, and a sorting trade is expected to spring up shortly. Wholesale dry-goods houses are busy stock-taking. Results are not yet announced, but the year's operations are expected to show satisfactorily. The textile trade continues active. Jobbers have all along been unable to secure their full requirements, and though they are not now placing heavy orders, neither they nor the retailers are cancelling orders already given. Values generally hold steady. Collections are fair. The money situation is still somewhat strained, but notwithstanding this business is moving well, and as soon as the stringency is relieved to any great extent it is expected there will be immediate expansion in all directions. Railway construction throughout the country is going ahead at a good pace. Until late in the fall about 20,000 men were kept steadily employed on the building of the new Grand Trunk transcontinental line. Country trade continues to show a fair tone. Farmers are now purchasing freely and collections are showing improvement. Receipts of all lines of produce continue light and values are steady to firm. Dairy produce is extremely firm on an active demand. Hide prices continue to decline.

WINNIPEG.—Sleighing has helped retail trade here and in the country districts, and holiday trade has begun to show a brisk movement. Wholesale trade is approaching the quiet season, but a sorting demand for winter lines is already beginning to make itself felt. The volume of grain being shipped from country points is unusually heavy for this time of the year. Wholesalers report collections generally fair. Groceries and dry goods are moving well.

VANCOUVER-VICTORIA.—Despite the fact that there is some easing off in industrial activity along the coast, wholesale and retail trade continues quite brisk. During the year there has been a large expansion in all lines, and it is only during the past month that there has been any sign of let up. Wholesale and retail trade are now moving quite briskly, and while in some cases collections are a little slow, there is no fear expressed regarding the future. The lack of ready money is affecting some industrial and real estate interests. An excellent holiday trade is being done.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending December 5 shows an aggregate of $2,471,883,000, as against $1,729,629,000 last week and $3,621,907,000 in the corresponding week last year. Canadian clearings for the week aggregate $89,707,000, as against $82,624,000 last week and $97,035,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	December 5	Inc.	Dec.	November 28
New York	$1,454,726,000	....	37.5	$981,288,000
Chicago	204,940,000	....	22.7	153,285,000

Money Market.

Loan market conditions at New York have improved this week to the extent that offerings of funds on time have become more frequent, although the rates asked for 60 to 90 day arrangements are 12@10 on mixed collateral and 12 per cent. or more on industrials. Lenders are decidedly exacting about the securities they will accept. At the beginning of the week the call loan rate was held at around 11@12 per cent., on account of the shifting of balances caused by the December 1 payments, but eased off after that, so that on Thursday the renewal figures were 6@5½ per cent. The premium for currency continued firm at first, rising to 2 per cent. or more on buying by interior national banks, which desired to strengthen their reserves in anticipation of the Comptroller of the Currency's call. It is the general feeling that the result of the call, showing, as it will, that country institutions as a class are holding abnormally large reserves, will lead to their putting out more and more money in the New York market as the financial strain diminishes and confidence reasserts itself. In the latter part of the week the currency premium dropped off to ¾@1 per cent. on the disappearance of the demand in question. While $5,000,000 more gold was engaged in London, making the total thus far $96,750,000, there was less pressure to obtain it, and, furthermore, the calls made by interior banks on their New York correspondents show decided diminution. The failures of banks at Kansas City and Pittsburgh were regarded apparently as the aftermath of the disturbance and had no particular effect on money-market sentiment.

New York Banks.

The Clearing House statement of last Saturday did not make as good an impression as was expected, and was, in fact, a rather confusing document, although it would seem to be based on rising averages. The increase in cash shown in the averages, of $1,980,300, was below the estimated gain from the week's movement, and one feature was an increase of $10,080,100 in loans, which was construed as reflecting the resumption of activity at the Stock Exchange which had been in progress during the week, supplemented possibly by preparations for the subscription to the new Panama bonds and to the 3 per cent. Treasury notes. The increase in deposits of only $3,464,000 was fully $8,500,000 out of the way in connection with the gains in cash and loans. No plausible explanation was, however, forthcoming as to this considerable difference. The change in question, however, increased the reserve requirements by $866,125, so that the deficit in the surplus was reduced by $1,114,175. The figures of the statement compare as follows with those of the preceding week:

	Nov. 30	Nov. 23	Changes
Loans	$1,198,078,500	$1,187,998,400	I. $10,080,100
Specie	170,554,600	168,799,100	I. 1,755,500
Legal tenders	47,276,800	47,052,000	I. 224,800
Deposits	*1,083,283,300	1,079,818,800	I. 3,464,500
Circulation	62,129,830	59,267,400	I. 2,862,400
Total reserve	217,831,400	215,851,100	I. 1,980,300
Reserve required	270,820,825	269,954,700	I. 866,125
Surplus reserve	†52,989,425	†54,103,600	I. 1,114,175

The following compares the statements for the respective weeks in 1907, 1906 and 1905:

	Nov. 30, 1907	Dec. 1, 1906	Dec. 2, 1905

Foreign Exchange.

Great irregularity continued to be shown in the movements of the exchange market at New York, but there was less excitement than in preceding weeks, and other factors than the demand for cables and sight sterling, in connection with gold-importing arrangements, came into play. At the beginning of the week it was understood that some loan bills were offered by various bankers, and though the amount involved was probably very small, this relaxation in the attitude of foreign interests was considered significant. The supply of bills was, however, not large, and this fact became more marked as the week progressed, resulting in an advance in the rate for demand sterling on Thursday to as high as 4 86.70. On the other hand, the inquiry for bills for gold importing was lessened to a notable degree, and the actual engagements in London footed up $5,000,000, making the total since the movement began $96,750,000. The Bank of England did not lower its rate of discount on Thursday, as it was hoped would be the case, the figure remaining at 7 per cent. Its weekly statement was, however, a very strong one, and the feeling abroad seems to be that the strain caused by New York's demand for gold is lessening and will probably soon disappear.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Nov. 30	Dec. 2	Dec. 3	Dec. 4	Dec. 5	Dec. 6
4.81 @ 4.87½	4.81 @ 4.87½	4.81 @ 4.87½	4.81 @ 4.87	4.81½ @ 4.87½	4.81½ @ 4.87½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.86.50 @ 4.86.75	4.86.20 @ 4.86.35	4.85.90 @ 4.86.20	4.86.10 @ 4.86.20	4.86.10 @ 4.86.60	4.86.30 @ 4.86 50

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.80.00 @ 4.80 50	4.80.00 @ 4.80.50	4.80.00 @ 4.80.50	4.80.00 @ 4.80.75	4.80.00 @ 4.80.75	4.80.50 @ 4.80.75

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.40; commercial bills, 4.79½@4.81; francs, 5.22½ less 1-32@5.18⅞ less 1-32; reichsmarks, 93 7-16@94¾ less 3-64.

While the Bank of England's rate was not changed, its statement for the week was a favorable one, showing a gain of £513,812 in gold, and an increase in the proportion of reserve to liability from 42.83 per cent. to 44.02 per cent. The loans also showed an apparent decrease of £1,139,000. In the London open market call money is 4¼@4½ per cent., and discounts 5¾@5⅞ per cent. The Bank of France's rate is still 4 per cent., and the Paris market quotation 4 1-16 per cent. The institution reported a decrease of 4,850,000 francs in gold. At Berlin the bank rate is unchanged at 7½ per cent., the market rate being 7⅛ per cent.

New York Securities Market.

Greater activity has been shown in the stock market this week than at any time since the beginning of the banking troubles around October 22. This has been accompanied by general, and in some cases large, advances in prices. The feeling in Wall street is that the indications point to a rapid restoration of normal conditions regarding credit and the exchanges between different parts of the country, and that money is destined to become once more fairly easy. Such anticipations were in fact encouraged by the easing off of call money to 6 per cent. and by the appearance of somewhat larger offerings of funds on time. It is held, furthermore, that the returns of the national banks to the Comptroller of the Currency, giving their condition as of December 3, showing, as they undoubtedly will, unnecessarily heavy cash reserves hoarded as a precautionary measure, will be followed by greater liberality, both in making loans and in paying out actual money; and there is very likely to be a general tendency to restore to the New York market the funds which were withdrawn from it under the conditions of the past six weeks. The principal factor, however, in causing the advances in prices was the existence of a very large short interest in many prominent stocks, there being urgent covering in a variety of issues, notably the Hill stocks, the Harriman group, Reading, New York Central, Atchison, Steel preferred, American Smelting and other securities. There has been, it is true, no lack of reactions, but they were, in the main, temporary, the most important of these demonstrations being on Wednesday, when the recall of the Japanese minister at Washington caused a momentary revival of talk about complications between this country and Japan. The President's message was awaited with a certain amount of curiosity, but its appearance produced little practical effect on the market. A notable incident was the fact that the failure of a Kansas City bank on Thursday checked the rising tendency of the market merely for a few minutes, the advances on that day being among the most notable of the week. There were very few incidents affecting the position of particular stocks, though more or less was heard about the possibility of the long heralded deal by which the Northern Pacific's interest in the Burlington would be disposed of to the Great Northern. Amalgamated Copper was quite active and developed strength in sympathy with the rest of the list, notwithstanding the absence of any favorable indications in the copper metal situation. Brooklyn Rapid Transit was something of a feature in the trading, presumably upon the covering of a substantial short interest. Bonds were again the objects of much activity, with further improvement in a large variety of issues, notably the New York City 4½s, United States Steel 5s, Atchison convertibles, Rock Island collateral 4s and Brooklyn Rapid Transit refunding 4s.

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*Nov. 29, 1907*	*Nov. 22, 1907*	*Nov. 30, 1906*
American	3,014,894	2,928,360	3,449,596
Other kinds	800,876	798,876	846,000
Total	3,815,770	3,727,236	4,295,596

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Nov. 29, 1907	*Nov. 22, 1907*	*Nov. 30, 1906*
Great Britain and continent	2,092,000	2,027,000	2,050,000
Egypt	185,000	167,000	188,000
India	289,000	285,000	343,000
United States	1,250,000	1,248,000	1,715,000
Total	3,816,000	3,727,000	4,296,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last year*
Week	484,512	573,104
Season	4,784,308	6,283,873

Wool Markets.

The market is still quiet, though there has been an improvement in the inquiry from manufacturers, especially those making woolen goods. Many sample bags have been set out, some of them resulting in business, while other sales are pending. Manufacturers are still buying only in small lots as actually needed. There are very few forced sales, and for the most part these lots are off grade. The market continues to gain in strength from day to day on the improvement in the financial situation, the easier money market and the unexpected firmness in foreign markets on good grades of wool. All fine grades have advanced in foreign markets during the week, although low grades are again lower. The purchases this year in Australia for American account were only about 10,000 bales, against 50,000 bales last year, and this assures holders of domestic wools that all their stocks will be needed before the next clip becomes available. Stocks in local dealers' hand are small, and consist largely of clothing wools, staples having been well cleaned up. One lot of staple sold during the week at 25 cents for 100,000 pounds. Clothing territories sold moderately, mostly fine medium. Fall Texas is in better demand, a sale being recorded of 150,000 pounds at 20@22 cents, with the choice grades in the lot at a higher price. Fleeces are quiet, though there is a better inquiry for quarter bloods.

Boston Shoe and Leather Market.

There is a better feeling in the shoe and leather trade. Many factories that shut down in part until the status of orders was better understood are resuming with a normal amount of operators. Shoe jobbers who were formerly countermanding orders are now calling for shipments, and even asking that shipments intended for January 1, 1908, be hastened before that date if possible. Desirable lines of leather are firm and scarce. Defective grades of leather are not wanted and move slowly. Business is still on the hand-to-mouth basis but somewhat broader, a greater number of factories being in want of leather than for several weeks past. Shoe manufacturers are taking a more hopeful view of the future. While their orders on hand do not show up well as compared with last year at this time, they believe that mail orders will come in freely later and keep operators well employed. There has been reported some cutting of prices, but only on a few lines of standard goods. Shipments of footwear this week reflect the Thanksgiving week shutdown and general curtailment of product during the past week. The *Shoe and Leather Reporter's* figures are as follows: Last week, 71,826 cases; preceding week, 85,146; last year, 97,235; total for 1907, 4,377,940; total for 1906, 4,954,475; decrease, 277,435.

AMMONIA FROM PEAT.

A new English process for obtaining ammonia from peat is described by Consul Halstead, of Birmingham. A great difficulty in the commercial utilization of peat has always been the large amount of water it contains, which averages 90 per cent. To eliminate the existing moisture down to 70 per cent. is a comparatively simple matter, but to reduce the moisture to a degree where the peat can be utilized for fuel is a long and expensive process.

The Woltereck process has at last overcome this difficulty. By this new method it has been finally determined on a manufacturing scale that a minimum yield of 5 per cent. of sulphate of ammonia is obtained from the peat, calculated as theoretically dry. The chief products of the Woltereck process, namely, sulphate of ammonia and paraffin tar, have a practically unlimited market, and the market for acetic acid, acetates, and their derivative—acetone—is continually expanding, especially that of the latter, of which enormous quantities are required by the manufacturers of smokeless powder. In addition, the ash of peat is salable to the farmer as a cheap fertilizer, since it contains potassium salts, lime and phosphoric acid in available form. After the peat has undergone the necessary harvesting it is conveyed to the works and automatically fed into hoppers working with compressed air and quickly dropped into the furnaces. Here it is subjected to moist combustion by means of a blast of air charged with water vapor at a regulated temperature. The resulting gases contain paraffin tars, acetic acid and ammonia. The paraffin tars are removed by the Woltereck scrubber, which retains all tarry matter without causing any condensation and consequent loss of ammonia. The acetic acid is next absorbed in the alkali tower, where the gases meet a hot solution of soda or milk of lime and combine with it to form acetate of soda or of lime, which may afterward be treated for the recovery of acetic acid or the production of acetone. The gases pass from the alkali tower to the acid towers, where they meet a stream of hot sulphuric acid, which combines with the ammonia to form sulphate of ammonia, the chief object of the process. After the acid is completely neutralized it is drawn off to the crystallizing vats. The solution of the sulphate is there further concentrated and allowed to crystallize, and after centrifugalizing to remove any adherent liquor, is ready for shipment.

The paraffin tar is drawn off from the scrubber, when a sample of the oil therein solidifies on cooling. It is then subjected to distillation to remove the lighter oils, and a crude paraffin wax worth about $19.50 a ton remains without further purification. The acetate solution obtained from the alkali tower is evaporated to dryness and distilled with sulphuric or hydrochloric acid to obtain concentrated acetic acid, or can be subjected to dry distillation to produce acetone.

HOW PIANOS ARE MADE.

A recent census bulletin gives a detailed accouut of the processes used in their manufacture. In recording the various steps in the manufacture of a high-grade piano the selection and seasoning of the various kinds of wood is the first and one of the most important. Only those grains and textures are used which have been found to possess the resonant quality necessary for the production of the desired tones. The wood used is almost entirely of American growth, the only notable exceptions being the expensive veneers for the case and the ebony for the black keys. The seasoning of this lumber requires several years, as the condition of the wood is a very important consideration in obtaining the best results.

This seasoned wood is sawed into widths, and the parts are usually made of a number of these widths fitted and glued together in order to withstand the influence of atmospheric changes, to obtain the best tonal results and to add to the strength. Very few metal bolts or screws are used in the manufacture of a piano, even the timbers of the framework being glued together under heavy pressure. It is found that better results are thus obtained, as the glue properly applied makes a permanent joint, whereas bolts or screws are liable to work loose.

The heavy wooden framework of a grand piano and that of an upright are necessarily different in form and construction, but the principles used are the same, for the solid, massive construction of the frame must assist the metal plate in bearing the strain of the strings.

The plate is a casting of metal, principally iron, and is made to fit over the frame. This portion of the piano is very generally manufactured by foundry and machine shops which make a specialty of piano plates and piano hardware. The smoothing down, machine drilling, and finally the bronzing and japanning of the plate are the important operations in the preparation of this casting.

The spruce pine used in the sounding board is the subject of most careful selection, and the building of this slightly convex and highly sensitive wooden surface and the arrangement of the bridges may be considered among the delicate features of piano manufacture.

The sound production is caused by string vibration, and the wire used, necessarily of great elasticity and of highest grade, is in some instances purchased abroad. The laying out of the scale, arranging the length and weight of wire according to absolute rule, requires expert ability as well as genius. The action or striking mechanism, the carefully balanced key, the felt-covered hammers and dampers, and many other delicately adjusted parts include numerous perfected contrivances. Toning or voicing the piano to produce tone shadings is done by softening the felt of the hammers with needles.

The setting up or assembling of the instrument, and the regulating of the many parts to make a harmonious whole, is the next step in piano manufacture. The sounding board and plate are attached to the framework, the wires are properly strung and chipped or tuned in a preliminary manner, the keyboard and action are then set in and adjusted, the final tuning of the strings is gone over by experts, and the combined results are most carefully tested.

Great care is expended in the finish of the case, inasmuch as the instrument is designed to please the eye as well as the ear. It is varnished, sandpapered and rubbed until a highly polished surface is obtained. Foreign taste prefers the dull finish, and by many this is considered more artistic.

LABOR-SAVING MACHINES AT PANAMA.

According to the *Scientific American*, "a large part of the labor cost of excavating the Culebra cut is due to the work of disposing of the excavated material on selected dumping grounds, onto which the material is hauled over railroad tracks. After the track is once laid it has to be continually shifted over to the edge of the dump. This is done by what is known as a track-throwing machine, which will throw over a mile of track a distance of nine feet in eight hours. This machine is handled by three men and six laborers, who do the same work in the same time that would necessitate the employment of 500 or 600 hand laborers. When the trainload of material has been hauled out to the dump, there comes the important question of unloading, and this is done by means of a special machine, which has made a record at Culebra of unloading 5,000 cubic yards from sixteen trains in eight hours. At this rate, seven unloaders and plows would take care of the daily output in the month of March last; and this would mean that twenty-eight white men and forty-two laborers could unload 32,000 cubic yards a day. A man with a shovel could unload only twelve cubic yards a day, upon which basis we find that by the old methods of unloading by hand it would require 2,660 laborers and 100 white foremen to do as much as twenty-eight white men and forty-three laborers and firemen employed on mechanical unloading.

"After the material has been plowed off the cars it is pushed away from the track by mechanical spreaders, which distribute the material from nine to twelve feet out from the track. To accomplish this work by hand would involve the use of 3,000 laborers, as against eight machines, sixteen white men and twenty-four laborers and firemen. A comparison of the train service of the French as used twenty-five years ago for hauling the material out to dump and the service now in operation at Panama shows also a remarkable gain in efficiency. This comparison is, of course, no reflection on the French method, as the development in the size and capacity of trains during the last quarter century has been extraordinary. The standard engine used by the French and rebuilt by us hauls a dozen four-yard dump cars, or a train carrying forty-eight cubic yards of material. Our engines haul twenty western dump cars of twelve yards capacity each, or 240 cubic yards a train; or they will haul seventeen flat cars of eighteen cubic yards capacity, a total of 306 cubic yards a train. Therefore, to haul our present output of 32,000 cubic yards daily it takes 666 French trains, as against 133 trains of western dumps or 104 trains of flat cars of our American equipment.

"In a general comparison of results with the work done twenty-five years ago by the French, which were the methods in vogue twenty years ago on similar work in the United States, we find that with a total of 7,000 men—superintendents, timekeepers, laborers, etc.—we took out of the Culebra cut in March last 815,270 cubic yards. At the height of their operations the French took out a maximum of 282,528 cubic yards from the Culebra cut in one month, with the employment of from 16,000 to 18,000 laborers alone, not including superintendents, foremen, etc. Probably of this number of laborers, about 50 per cent., or 9,000, was the efficient working force."

MANUFACTURING IN MASSACHUSETTS.

The Massachusetts Bureau of Labor has compiled some interesting data on the manufacturing industries of that state, the figures being for 1905 and 1906. While the report does not cover all of the industries of the state, it nevertheless takes in the bulk of the industries. Thus returns are given for 5,055 plants, of which 2,979 are under partnerships and 1,981 in corporations, while the industrial corporations or combinations considered number ninety-five. Some 115 of the 5,055 establishments under partnerships in 1905 changed to the corporate form in 1906. A comparison of the figures relating to capital, work done, labor and wages for all these establishments follows:

	1905	1906	*Inc. per ct.*
Capital	$616,355,050	$651,221,011	5.66
Stock used	$552,147,704	$739,140,554	13.34
Goods made	$1,134,035,780	$1,271,427,534	12.12
Persons employed:			
Average number	476,105	509,283	6.97
Males	321,604	345,251	7.66
Females	154,501	163,037	5.52
Smallest number	411,869	448,830	8.97
Greatest number	534,712	565,472	5.75
Excess of greatest over smallest	122,843	116,642	*5.05
Total wages	$227,135,046	$225,079,435	10.98
Average yearly earn'gs	$477.07	$494.96	3.75

* Decrease.

It is to be added that the mills in 1906 ran on the average up to 73.8 per cent. of their total capacity, against only 71.5 per cent. in 1905. The report contains interesting statistics relating to what is called the "industry product" and the distribution of the same. This industry product is the amount by which the value of goods made exceeds that of the material used in the making. The following table shows for the nine principal industries how this excess differs relative to capital employed and number of employees, and also the percentage of the excess which went to pay wages:

	Per $1,000 of capital	*Av'ge per employee*	*P. ct. to wages*
Boots and shoes	$1,805	$954	57.4
Carpetings	794	866	55.3
Cotton goods	494	724	54.9
Leather	447	1,118	44.6
Machines and machinery	654	1,079	54.8
Metals and metallic goods	1,000	1,122	50.8
Paper	597	1,200	39.8
Woolen goods	713	984	45.4
Worsted goods	566	976	45.0

What of the "industry product" did not go to wages went to salaries, rents, commissions, interest on capital, insurance—in fact, to the account of all expenses of manufacture aside from the cost of raw material and wages.

Remington
Billing Typewriter

What It Does

It writes your bills with double the speed of the pen.

It writes bill and charge sheet at one writing—no more need for separate charge entries.

It writes at the same time any additional charge or order copies that your system may require.

It adapts itself perfectly to your system or the needs of any business.

It improves system, insures against errors—makes short cuts which were impossible under former methods.

It extends the field of the typewriter to form and tabular work of every kind and description and always with an immense saving of time, labor and expense.

SATURDAY, DECEMBER 14, 1907.

Nothing seems to have been left undone by President Roosevelt to make clear his determination not to be a candidate for another term. Last month he addressed to the members of his Cabinet a letter instructing them to inform federal office holders that any advocacy of his renomination, or acceptance of an election as delegate for that purpose, would be regarded by him as a serious violation of official propriety, and would be dealt with accordingly. This letter was written on November 19. It was made public on December 10, after the Cabinet meeting on that day, doubtless with the view of giving the announcement made as wide a publicity as possible. The publication of this letter has since been followed by the issuance of a statement in which the President recites the declaration made by him the night after the presidential election in 1904, and says emphatically that he has not changed and will not change the decision then announced. In the statement of 1904, it may be recalled, Mr. Roosevelt declared that the wise custom which limits the President to two terms regards the substance and not the form, and that under no circumstances would he be a candidate for or accept another nomination. The position taken by the President is the one which those who admire him most have all along expected him to maintain, and it need scarcely be said that, taking all things into account, his statement is a document of the first consequence as regards contemporary politics.

The feature of chief interest in the proceedings of Congress this week was the bringing up for consideration in the Senate of resolutions of inquiry relative to the measures lately taken by Secretary Cortelyou for the relief of the financial strain. Resolutions of this tenor were called up by Senators Clay, Culberson and Tillman. Owing to the absence of the chairman of the Finance Committee on Monday, these resolutions were laid over without discussion. On the following morning these resolutions were discussed in the Committee on Finance, where Chairman Aldrich seems to have secured the consent of his associates on the committee and of the senators introducing the resolutions to have them referred to the Finance Committee, and to have discussion upon them postponed. As a result, when the Senate met the resolutions were referred practically without debate. On Thursday Chairman Aldrich brought in a resolution embodying the substance of the various requests made in the resolutions referred to, and this was unanimously adopted by the Senate.

This omnibus resolution calls upon the Secretary of the Treasury for information in detail as to the location of the United States depositories, the amount of public money on deposit in each and the character of the securities therefor, for the period from October 1 to December 3 last; as to the movement of the currency between the different sections of the country and the amount of gold imports and exports for the same period; as to the condition of the national banks on August 2 and December 3; as to the amount of clearing house certificates issued by the clearing house associations of the principal cities from October 25 to December 3, and as to the issue of Panama bonds and 3 per cent. certificates authorized by the Treasury circular of November 18 last. It will take some little time to present this information in the detail required by the resolution, and it is only fair to suppose that when it is laid before the Senate, any discussion that may be had upon the subject will be at once better informed and less disturbing than it could be at this time.

Stock market conditions are again dominated by the actual situation in the money market rather than by the prospective improvement in the latter respect. The maintenance of a premium for currency, the payment of dividends on leading stocks in scrip, and the unwillingness of the banks to give accommodation to speculative purchasers of securities, all tend to create a renewal of bearish sentiment in Wall street. Furthermore, the developments of the past week, which are detailed in another column, would tend to create conservatism in financial quarters, even if they do not negative the hope of improvement in the money and stock markets after the turn of the year. It has to be recognized that while the outlook has, on the whole, improved, the immediate conditions are not regarded as entirely favorable for the continuance of the regular dividends on a variety of common stocks of both railroad and industrial companies, a circumstance which naturally has had a bearing on the action of the market at this time.

Some progress seems to have been made by the Central American Peace Conference at Washington in the last week or two. Recent advices indicate that a practical agreement has been reached on the outlines of an arbitration treaty which embodies the feature of an international court for the settlement of differences arising between them. The delegates to the conference are not confronted by the difficulty as to the constitution of the court which so greatly embarrassed the second Hague conference at its late session. The number of judges has been fixed at five, a number which gives each of the states a representative on the bench. It even appears that the location of the court has been determined upon. Its sittings will be held at Cartago, in Costa Rica, at certain stated periods to be hereafter determined, but provision is to be made for calling it together whenever its attention is demanded by any pressing necessity. Treaties regarding extradition and commerce and navigation are expected to be adopted before the conference adjourns.

In the resolutions adopted before its adjournment the Rivers and Harbors Congress at Washington declared that it stood for a policy and not for a project. It earnestly urged the adoption by the federal government of a wise, liberal and comprehensive waterway policy that will provide for the proper improvement within the next ten years of the rivers, waterways and harbors of the country, the improvement of which is justified by present and prospective benefits to commerce. With this proposition was associated the suggestion that Congress should enact such legislation as will make the Inland Waterways Commission permanent and provide it with necessary authority for its investigations and recommendations. Finally, the resolutions suggested that Congress should view the appropriations required for the work of bettering the waterways not as provision for the current expenses of government, but as an investment in permanent improvements bound to pay increasing dividends from year to year, and that from this point of view Congress is fully warranted in authorizing an annual expenditure of not less than one-tenth of the amount required for the improvements already planned or hereafter to be planned and approved by the engineers in charge. This annual sum was estimated by the congress at not less than $50,000,000. Speaker Cannon, it may be noted, gave a committee of the congress which waited on him most encouraging assurances regarding his attitude toward their proposals.

More significance than appeared upon the surface seems to be attached to the recent appeal of Chancellor Von Buelow to the German Reichstag for its support as a condition of his continuance in office. For some time the Chancellor has placed his dependence upon a coalition of several groups composed of Conservative, Radical and Liberal members, but recently he seemed to become doubtful of his ability to rely upon their effective support, particularly in view of an attack made upon the government by a prominent national Liberal leader. He took what is regarded as an unprecedented step last week in summoning several of the leaders of the various groups and informing them that unless he could rely upon a majority from the coalition, he would ask the Emperor for leave to retire. He asked the leaders to discuss the matter with their followers and to let him know whether they could promise united support. The men consulted gave the required assurances, and the Chancellor decided to remain in office. The outcome was from one point of view a triumph for the Chancellor, but to secure it he has, it is held by many, recognized the principle of ministerial responsibility to the legislature. Heretofore no one has thought of the resignation of the Chancellor as the necessary result of a vote of distrust, he being generally regarded as responsible to the Emperor alone.

King Oscar II, of Sweden, died on Sunday, December 8, and the succession to the Swedish throne was assumed without disturbance or delay by his eldest son, Oscar Gustaf Adolph, who took the title of Gustaf V. The dead King had been for some time in failing health, and his successor was some days before invested with the regency. King Oscar was in his seventy-ninth year and in the thirty-sixth of his reign. He was among the most beloved of European monarchs, a man of taste and accomplishments, but of most democratic habits. As is well known, his family sprung from the people. He was the grandson of the famous Bernadotte, who found a marshal's baton in his knapsack while following the fortunes of Napoleon I, and later succeeded in exchanging his truncheon for a scepter. The most notable and to Oscar the most melancholy event of his reign was the separation of Norway from Sweden two years ago, a change with the steps in which our readers have been made familiar. The separation, indeed, is said to have weighed so heavily upon the spirit of the old King that it had no little effect in hastening his end. The new King is in his fiftieth year, over six years older than his father when he came to the throne, and about fourteen years older than King Haakon VII, who has for two years reigned in Norway.

COMMODITY PRICES DECLINE SHARPLY.

BRADSTREET'S prices statement as of December 1, 1907, gives a very full exhibition of the effect upon consumptive demand of the sharp reaction in trade which occurred in November. Nothing like the general tendency to price weakness has been seen for years past, and as illustrative of the movement, it may be said that only one group of products showed a gain as against twelve showing a loss in their index numbers. Sixty out of 105 products declined, while only twelve products advanced and thirty-three remained unchanged. Of the twelve products advancing four were in one group—that of textiles—raw cotton, some southern cotton sheetings, raw wool and hemp in that group constituting the only marked exception to the general declining tendency. The general index number as of December 1, 1907, was $8.5246, a decrease of 2.5 per cent. from November 1, 1907, of 6.6 per cent. from the high record level of March 1, 1907, of 4.2 per cent. from December 1, 1906, and of 2.6 per cent. from December 1, 1905. Compared with the high level of February, 1900, however, the index number on December 1 this year shows a gain of 3.5 per cent., and from the low level of July 1, 1896, the present index number shows a gain of 49.4 per cent.

The net result of the various movements during the month of November is illustrated by the following table giving the index numbers (totals of prices per pound) at different dates by groups of commodities:

	July 1, 1896	*Dec.* 1, 1906	*Mar.* 1, 1907	*Nov.* 1, 1907	*Dec.* 1, 1907
Breadstuffs	$0.0524	$0.0758	$0.0817	$0.1067	$0.1046
Live stock	.1855	.3185	.3315	.3195	.2620
Provisions	1.3619	2.0738	2.1049	2.0096	1.9727
Fruits	.1210	.2157	.2003	.1807	.1614
Hides and leather	.8250	1.2000	1.1975	1.2025	1.1600
Textiles	1.5799	2.6409	2.7369	2.7431	2.7646
Metals	.3757	.8208	.8466	.8211	.5953
Coal and coke	.0048	.0078	.0080	.0070	.0069
Oils	.2082	.3195	.3428	.3596	.3476
Naval stores	.0402	.1088	.1170	.0851	.0762
Building materials	.0716	.0929	.0966	.0900	.0892
Chem. and drugs	.0607	.7083	.7083	.7054	.6781
Miscellaneous	.2150	.3015	.3632	.3105	.2730
Total	5.7019	8.9023	9.1293	8.7468	8.5246

Fluctuations in the price level in the past fifteen years are shown in the following table, which gives the respective swings from high to low and the reverse thereof, as noted by BRADSTREET'S approximate index number:

Jan. 1, 1892	$8.1382	Feb. 1, 1906	$8 2415
July 1, 1896	5.7019	Mar. 1, 1906	8.2321
Jan. 1, 1897	6.1164	April 1, 1906	8.2987
July 1, 1897	5.8537	May 1, 1906	8 3054
Feb. 1, 1900	8.2307	June 1, 1906	8.3203
June 1, 1901	7.4181	July 1, 1906	8.2835
Dec. 1, 1902	8.1413	Aug. 1, 1906	8.3376
Aug. 1, 1903	7.7473	Sept. 1, 1906	8.4528
Feb. 1, 1904	8.0973	Oct. 1, 1906	8.5580
July 1, 1904	7.6318	Nov. 1, 1906	8.7509
Jan. 1, 1905	8.0827	Dec. 1, 1906	8.9023
Feb. 1, 1905	8.0805	Jan. 1, 1907	8.9172
Mar. 1, 1905	8.0976	Feb. 1, 1907	8.9953
April 1, 1905	7.9996	Mar. 1, 1907	9.1293
May 1, 1905	7.9700	April 1, 1907	8.9640
June 1, 1905	7.9073	May 1, 1907	8.9356
July 1, 1905	7.9160	June 1, 1907	8.9901
Aug. 1, 1905	8.1111	July 1, 1907	9.0409
Sept. 1, 1905	8.2795	Aug. 1, 1907	8.9304
Oct. 1, 1905	8.2298	Sept. 1, 1907	8.8297
Nov. 1, 1905	8.2097	Oct. 1, 1907	8.8506
Dec. 1, 1905	8.3014	Nov. 1, 1907	8.7468
Jan. 1, 1906	8.3289	Dec. 1, 1907	8.5246

Where nearly all staple commodities weakened, as they did in November, it is difficult to pick out any special features, but it might be noted that the declines in hops and rubber caused a heavy loss in the miscellaneous group, while the weakness of hides and most leathers caused almost as heavy a decrease in the raw materials of footwear. A majority of food products declined, and hog products, especially, were weak. Butter, however, advanced, as did eggs and potatoes. All live animals moved lower, as did most cereals, but while the metals group as a whole eased, iron and steel products remained quite strong.

The effect of the price movement in November will be found in the following table:

DECEMBER 1, 1907, COMPARED WITH NOVEMBER 1, 1907.

INCREASES.		
Barley	Cotton	Quicksilver
Eggs	Wool, Australian	Linseed oil
Butter	Hemp	Alcohol
Potatoes	Cotton sheetings, southern	
Peanuts		
DECREASES.		
Wheat	Rice	Tin
Corn	Beans	Bituminous coal
Rye	Peas	Connellsville coke
Beeves, live	Apples	Cotton-seed oil
Sheep, live	Cranberries	Olive oil
Hogs, live	Lemons	Rosin
Horses	Raisins	Turpentine
Beef, carcasses	Currants	Tar
Hogs, carcasses	Hides	Yellow pine
Mutton, carcasses	Union leather	Spruce timber
Pork	Oak leather	Borax
Bacon	Jute	Carbolic acid
Hams	Silk	Caustic soda
Lard	Flax	Nitric acid
Cheese	Pig iron, eastern	Sulphuric acid
Mackerel	Pig iron, southern	Opium
Coffee	Pig iron, Bessemer	Hops
Sugar	Silver	Rubber
Tea	Copper	Ground bone
Molasses	Lead	Cotton seed
UNCHANGED.		
Oats	Iron ore	Lime
Flour	Steel billets	Nails
Milk	Steel rails	Glass
Bread	Tinplates	Hemlock timber
Beef	Steel beams	Alum
Codfish	Anthracite coal	Bicarbonate soda
Salt	Southern coke	Phosphate rock
Wool, Ohio & Pa.	Petroleum, crude	Quinine
Print cloths	Petroleum, refined	Tobacco
Standard sheetings	Castor oil	Paper
Ginghams	Brick	Hay

Compared with a year ago the following changes are noted:

DECEMBER 1, 1907, COMPARED WITH DECEMBER 1, 1906.

INCREASES.		
Wheat	Peas	Petroleum, crude
Corn	Potatoes	Petroleum, refined
Oats	Oak leather	Linseed oil
Barley	Cotton	Castor oil
Rye	Wool, O. and Pa.	Olive oil
Flour	Wool, Australian	Nails
Milk	Print cloths	Alcohol
Beef	Standard sheetings	Opium
Cheese	Ginghams	Quinine
Codfish	Cotton sheetings	Tobacco
Molasses	Iron ore	Paper
Rice	Quicksilver	Hay
DECREASES.		
Beeves, live	Lemons	Connellsville coke
Sheep, live	Raisins	Southern coke
Hogs, live	Currants	Cotton-seed oil
Horses	Hides	Rosin
Beef, carcasses	Hemlock leather	Turpentine
Hogs, carcasses	Hemp	Tar
Mutton, carcasses	Jute	Brick
Eggs	Silk	Lime
Pork	Flax	Glass
Bacon	Pig iron, eastern	Yellow pine
Hams	Pig iron, southern	Spruce timber
Lard	Pig iron, Bessemer	Borax
Butter	Steel billets	Carbolic acid
Mackerel	Silver	Nitric acid
Coffee	Copper	Sulphuric acid
Sugar	Lead	Hops
Beans	Tin	Rubber
Cranberries	Bituminous coal	Ground bone
Peanuts		
UNCHANGED.		
Bread	Steel rails	Alum
Tea	Tinplates	Bicarbonate soda
Salt	Steel beams	Caustic soda
Apples	Anthracite coal	Phosphate rock
Union leather	Hemlock timber	Cotton seed

It will be seen from the above that compared with December 1, 1906, fifty-five articles are lower, thirty-six are higher and fifteen are unchanged.

SMALLER RAILWAY GROSS EARNINGS FIGURES.

For some time past it has been quite obvious that railway gross earnings were tending toward lower levels. As the year draws to a close the movement in this respect becomes more marked. Of course the developments are not desirable, but they are in line with anticipations, as well as in consonance with the known movements in commercial and industrial circles, in which reaction has become noteworthy, primarily because of the paucity of currency. At the moment railway traffic is comparatively light, cars are more abundant, and many of the roads are engaged in cleaning up freight. Signs of the retrogression have not been lacking; indeed, it may be said that evidence of this character has been quite patent ever since November of last year, despite the fact that the spring and early summer months of this year showed heavy ratios of gain. But in this connection it might be remembered that average weather conditions in January and February, particularly in the northwest, in parts of which traffic was almost at a complete standstill, caused considerable railway tonnage to be carried over into the spring months. Therefore the earnings figures reported in April, May and June were expanded as the result of conditions that had gone before, and can hardly be taken as a true index of the actual situation then prevailing.

However, the latest returns on gross earnings, those for November, show a very small ratio of gain—only 2.5 per cent. over the figures for November, 1906, when the increase over the same month in 1905 amounted to but 4.6 per cent. The total for November this year, $53,595,494, as compared with $52,268,829 for November, 1906, covers the operations of only 74,000 miles of road, but the returns are probably representative of a trend. Now, while it is true that smaller ratios of gain were displayed in January and February last—2.4 per cent. and 2 per cent. respectively—it is a fact that the 2.5 per cent. reported on the present occasion is really less favorable than the results shown in either of the months first mentioned, for in those periods meteorological conditions, as heretofore explained, were very unfavorable for traffic operations. Indeed, the very smallness of the present increase brings to the mind the trend of railway affairs early in 1904, as a study of this short statistical history of railway gross earnings shows:

	1907 *Inc.*	1906 *Inc.*	1905 *Inc.*	1904 *Dec.*	1903 *Inc.*	1902 *Inc.*	1901 *Inc.*
January	2.4	19.4	6.1	3.8	10.1	7.6	8.1
February	2.0	25.6	†2.7	*.2	13.5	3.9	7.6
March	8.0	9.5	10.3	.05	14.5	6.7	7.4
April	16.0	11.7	8.7	4.5	14.3	11.2	8.9
May	15.1	14.7	9.5	3.5	12.0	9.0	9.2
June	13.4	13.3	6.3	.6	14.1	8.1	6.8
July	11.4	14 1	7.4	1.4	12.3	7.5	13.3
August	9.1	13.1	5.1	*3.4	9.4	4.6	13.2
September	8 0	9.3	6.3	*4.0	7.9	9.6	10.5
October	6 0	11 2	5.9	*4.0	5.5	6.6	11.8
November	2.5	4.6	9.1	*9.9	4.0	7.2	12.1
December	..	5.7	9.9	*8.0	4.6	9.4	5.5
Year	..	12.7	5.9	*1.4	11.5	8.0	10.5

* Increase. † Decrease.

Examination of the individual reports thus far made shows that the roads of the southwest and parts of the south have been more sharply affected than those operating elsewhere, although some few western roads also indicate decreases. The probabilities are that the earnings of many southwestern carriers felt the influence of the lighter cotton movement, which was very heavy at this time last year, and the leading southern roads reflect the industrial conditions prevailing in the Birmingham district.

The leading increases in gross earnings for November this year, as compared with those of November, 1906, are set forth in the following:

Great Northern system	$944,043
Canadian Pacific	599,187
Canadian Northern	216,700
Colorado & Southern	203,376
Illinois Central	199,193
Grand Trunk	173,820
Yazoo & Mississippi Valley	75,735
Western Maryland	74,639
Buffalo, Rochester & Pittsburgh	71,870
Central of Georgia	56,000

The more noteworthy decreases from November, 1906, are shown in the following:

International & Great Northern	$337,000
Texas & Pacific	258,920
Louisville & Nashville	221,742
Missouri Pacific system	145,000
Chicago Great Western	134,789
Wabash	100,103
St. Louis Southwestern	83,815
Chicago, Indianapolis & Louisville	70,605

It should be particularly explained that the loss reported by the Chicago Great Western is due in large part if not wholly to a strike which has continued on the road since September 14.

SECRETARY STRAUS ON IMMIGRATION PROBLEMS.

Matters connected with immigration are rendered of interest just now by a variety of circumstances, such as the discussions between the United States and Japan, and the latter country and Canada, regarding its restriction, the outgoing tide of foreigners returning to their own country, and the suggestion of legislation looking to a further and closer regulation of the movement. In view of these circumstances the report of the Secretary of Commerce and Labor, which devotes much space to a consideration of immigration questions, has a special timeliness. It is known, of course, that the immigrants for the last fiscal year exceeded those for the year before, numbering 1,285,349 persons, an increase of 184,614, or 17 per cent. over those for the preceding fiscal year, and one of 35 per cent. over the fiscal year 1905. The fact is brought out in the report, however, that of the total number mentioned, 1,100,771 ranged in age from fourteen to forty-four years of age and 138,344 were less than fourteen years of age, leaving only 46,234 who had reached or passed the age of forty-five. About 30 per cent. of the whole number were illiterate. They brought into the country in all $25,599,893, or an average of nearly $20 for each person.

Secretary Straus touches upon the important question of the distribution of immigrants, expressing the hope of the department that immigrants may be directed to those sections of the country—the south, the southwest and the west—which have need of a kind of immigration adapted for agricultural and manufacturing pursuits. It is plain to everybody that at present there is a congestion of immigration on the eastern seaboard. This would be relieved by a proper distribution, which at the same time would benefit the parts of the country where there is a notable shortage of labor. In the last act dealing with the subject Congress made provision for a division of information which it is hoped will materially aid in the work of locating immigrants where they are most needed.

More than usual attention has been attracted during the latter months of this year to the exodus of returning aliens. The number has been unusually large, but it is suggested by Mr. Powderly, of the new division of information, that the interest manifested in the matter is in great part owing to the fact that this year, for the first time, statistics have been kept of the number of returning aliens. Secretary Straus estimates in his report that during the last fiscal year about 310,000 aliens left the country, of whom probably 100,000 were of the non-immigrant alien class. Next year more reliable data will be available, except as to the number of naturalized aliens who leave the country to reside permanently abroad.

One of the most interesting portions of the report is that in which the Secretary touches upon the subject of Oriental immigration. He suggests that the time is opportune for reaching a better understanding with China on the subject of immigration from that country, and he urges a modification of the present provisions for executing the exclusion laws, particularly those features which seem to imply a discrimination on account of race.

He suggests also that there is need for differentiation in the regulation of Oriental immigration as between the mainland of the United States and its insular dependencies, saying that it is not to be expected that a particular policy of restriction in the matter of immigration expressly designed to meet the situation on the mainland should be perfectly adapted to the need of insular communities. The special conditions of the latter should, he thinks, be taken into account individually and provided for by legislation.

Interest is lent to this part of the Secretary's report by recent advices from Washington and Tokio. At the close of last week it was announced that Ambassador O'Brien had suggested that preparation should be made by the government to meet the request of the Japanese Cabinet for a new immigration treaty. There have been suggestions that the recall of Viscount Aoki was connected with the desire of the Tokio government for a new arrangement to take the place of the present one, and that the task of completing the negotiations will be the chief work of the coming ambassador, Baron Takahira, though the preliminaries may be entered into with the present Japanese representative at Washington, pending the ambassador's arrival. An account from Tokio reports that a movement has developed in Japan, though not without opposition, looking to the prohibition of the emigration of laborers to the United States and Canada, while other advices indicate that informal arrangements have been entered into between the Japanese Foreign Minister and representatives of the United States and of Canada under which emigration to those countries will be limited to students and commercial men having means of support, while Japanese laborers will be prevented from coming over.

REVISING NEW YORK'S CHARTER.

The leading position of New York among the cities of the country lends a special interest to suggestions of changes in its government, and for that reason the recommendations of the latest Charter Revision Commission will receive attention far beyond the boundaries of the city or even of the state. The most striking as well as the most important suggestion made is the general one that the principle of home rule should be applied as far as possible to the management of the affairs of the city. This is especially urged as regards the city's expenditures. In the view of the commission, the power over the local purse should be placed in a responsible municipal board, without any save the most general restrictions by the state, and all mandatory provisions compelling appropriations should be repealed.

As a factor in locating responsibility for the executive management of the city's affairs, it is suggested that the mayor's power of appointment and removal be increased. This is a plan that has very generally commended itself to students of municipal affairs. In a general way the continuance of the borough form of government is recommended, though it is urged that some of the existing powers of the borough presidents should be devolved on central administrative bodies. In particular, it is proposed that a department of street control should be created and vested with all the jurisdiction now vested in the borough presidents with respect to the construction of streets, sewers, pavements and other structures, openings for all purposes in street surfaces, and incumbrances, and, indeed, all control over the streets, with the exception of the regulation of traffic therein, which it is proposed to lodge in the police department.

Other proposals of the commission involve the reduction of the board of aldermen to twenty-one members and of the board of education to fifteen; increased powers for local improvement boards; the establishment of a bureau of public improvements, and of a bureau for the purchasing of supplies for all departments; the appointment of a superintendent of police from the uniformed force; the abolition of the board of city record, of the aqueduct commission, of the tax board and of the coroners. In the view of the commission, there ought to be no power in the legislature to compel the city to incur indebtedness or expense of any nature, unless unmistakably and unavoidably requested by the responsible authorities of the city, or necessitated for state purposes, where state functions, as distinguished from purely local ones, are vested in the municipal officers. This suggestion is directed against the too ready legislative authorization of issues of revenue bonds, a power which, it is held, has been abused and should be restricted. Another suggestion of interest is that a uniform system of departmental accounting should be established. Taken altogether, the suggestions of the commission constitute a most interesting contribution to the literature of civic administration. They deserve the attention of all thoughtful citizens and the most careful consideration of the legislature, which would do well to embody most of the recommendations in a new charter for the city. That document should then be left untouched for a considerable period.

COTTON AND WHEAT CROP REPORTS.

This week has been prolific in crop reports, cotton, the latest of this year's crops to be gathered, and winter wheat and rye, which may be regarded as belonging to next year, all being treated of. As to cotton, we learn from the Department of Agriculture that the total production in the United States for the year 1907-08 will amount to 5,581,968,000 pounds (not including linters), equivalent to 11,678,000 bales of 500 pounds gross weight. The estimated production in 500-pound bales, by states, is as follows:

Virginia	14,000
North Carolina	604,000
South Carolina	1,091,000
Georgia	1,808,000
Florida	64,000
Alabama	1,216,000
Mississippi	1,536,000
Louisiana	712,000
Texas	2,490,000
Arkansas	796,000
Tennessee	298,000
Missouri	40,000
Oklahoma	919,000
United States	11,678,000

The market effect of the winter-wheat estimate was practically nil, but the issuance of the cotton estimate caused a break of 50 points, because while the estimate was on its face a rather bullish one, the trade remembers that the government estimate for the past three years has been about 1,000,000 bales annually below the commercial crop. There also appeared the ginning returns as of December 1, which showed 8,338,854 bales ginned, as against 10,027,868 bales ginned a year ago and 8,689,663 bales ginned at this date in 1905. In the following table will be found the estimates of yield made by the government Department of Agriculture during each of the years from 1902 to 1906, with the actual production as shown by the ginning returns, and the commercial crop as shown by the "actual count" at the close of the cotton season. The first or government estimate excludes linters, while the other two include them:

	Government	*Census*	*Commerc'l*
1906	12,546,000	13,305,265	13,550,760
1905	10,167,818	10,725,602	11,319,860
1904	12,162,700	13,697,310	13,556,841
1903	9,962,000	10,015,721	10,123,686
1902	10,417,000	10,784,473	10,758,326

According to the census, the 1906 crop furnished 322,064 bales of linters; that of 1905, 230,497, and that of 1904, 245,973.

The newly seeded area of winter wheat is estimated by the Department of Agriculture as being 1.9 per cent. less than the area sown in the fall of 1906—equivalent to a decrease of 596,000 acres, and a total acreage of 31,069,000. The condition of winter wheat on December 1 was 91.1, as compared with 94.1 on December 1, 1906, 94.1 at the corresponding date in 1905, and a ten-year average of 93. The following table shows for each of the principal states the percentage of acreage sown to winter wheat this fall as compared with that sown last year, the estimated acreage sown this fall, the average of condition on December 1 of the present year, the corresponding average for 1906, and the mean of the December averages for ten years:

	Acreage	*Acres 1907-08, prelim'y*	*Average condition Dec. 1, 1907*	*Dec. 1, 1906*	*Ten-year av'ge*
Kansas	100	5,930,000	95	95	95
Indiana	100	2,779,000	91	95	90
Missouri	98	2,271,000	93	91	92
Ohio	96	2,126,000	84	97	94
Nebraska	105	2,359,000	93	98	88
Illinois	101	2,381,000	91	94	94
Pennsylvania	98	1,626,000	86	98	94
California	91	1,519,000	88	90	94
Oklahoma	95	1,379,000	94	93	93
Texas	78	988,000	93	94	93
Michigan	93	896,000	87	89	94
United States	98.1	31,069,000	91.1	94.1	93.

This estimate of area and condition is figured to point to a possible crop of 490,000,000 bushels, as against an actual outturn this year of 409,000,000 bushels. December 1 winter-wheat crop prospects, however, are seldom realized. The newly seeded area of rye is estimated as being 2.2 per cent. less than the area sown in the fall of 1906—equivalent to a decrease of 46,000 acres, and a total acreage of 2,015,000. The condition of rye on December 1 was 91.4, as compared with 96.2 on December 1, 1906, 95.4 at the corresponding date in 1905, and a ten-year average of 95.9.

BANK RESERVES AT LEADING CITIES.

Full returns of the condition of national banks on December 3, under the Comptroller of the Currency's recent call, are still lacking. The principal items regarding the position of the institutions at certain cities have been furnished from Washington, but they are scattered and afford only an imperfect basis for framing conclusions about the general situation. The New York Clearing House has, however, made up a full statement of the national banks of Greater New York which is of special interest, and is reprinted in condensed form herewith:

LIABILITIES.	*Dec. 3*	*From Aug. 22 Changes*
Capital	$116,443,000	D. $213,500
Net profits	146,557,800	I. 3,174,800
Circulation	67,194,700	I. 15,321,900
Gross deposits due banks and trust companies	443,254,600	D.27,412,600
Gross dep's due other depositors	677,336,300	D.96,266,300
Unpaid dividends	62,500	I. 6,900
Bonds borrowed	88,394,900	I. 58,740,200
Clearing House account, net bal.	30,199,100	I. 30,199,100
Total	1,560,443,500	....
RESOURCES.		
Loans and discounts	$783,588,300	I.$59,306,700
Clearing House account, net bal.	33,750,000	I. 33,750,000
United States bonds on hand	2,865,100	D. 278,800
U. S. bonds to secure circulation	72,321,600	I. 19,700,300
United States and other bonds to secure United States deposits.	92,266,500	I. 59,923,800
Other stocks, bonds and mtges.	155,218,500	I. 15,965,600
Premium on U. S. bonds	1,901,700	I. 254,500
Real estate, furniture and fixt's.	31,085,700	I. 4,489,100
Due from banks	52,213,100	D. 6,216,900
Exchanges for the Clear'g House	150,050,300	I. 29,599,000
Cash items and bank notes	9,980,600	I. 1,395,900
Specie	152,896,000	D.26,431,700
Legal tenders	29,584,100	D.16,726,200
Overdrafts	1,713,000	I. 1,211,800
Total	1,560,443,500	....

The weekly Clearing House averages since the beginning of the financial disturbance had already indicated the extent to which the banks at the metropolis have extended assistance to institutions in all parts of the country. This is illustrated by the decrease of $27,412,600 in the amount due banks and trust companies by the New York national banks in the period between August 22 and December 3, in the face of the increase of $96,268,500 in other deposits, and of an aggregate shrinkage of $33,157,900 in the specie and legal-tender holdings, while the percentage of reserve to deposits fell from 26.81 per cent. to 21.89 per cent.

In the absence of material for a treatment of the subject in its entirety, there has been a good deal of discussion regarding the published statements of individual banks in various parts of the country, some of which show as much as 40 to 50 per cent. of reserve. In fact, not a little criticism has been heard about the impolicy of this so-called hoarding of cash by banks and the tendency it may have to prolong the financial strain. At the same time it is to be kept in mind that a certain proportion of the apparently excessive reserves are in fact held at the central reserve cities by the reserve agents of country banks, and are therefore not practically available for actual circulation. In reality, comment upon this phase of the situation is superfluous until the complete figures are given out.

So far as the Treasury has made public the statements of the national banks at prominent cities, the comparisons made of their reserves on December 3 with those on August 22, 1907, and November 12, 1906, present the following:

PERCENTAGE OF RESERVE HELD.

	Dec. 3, 1907	*Aug. 22, 1907*	*Nov. 12, 1906*
New York	21.89	26.81	25.51
Phi'adelphia	21.81	25.00	23.07
Boston	22.77	25.57	23.77
New Orleans	27.22	24.81	25.94
Minneapolis	26.24	24.33	22.02
Louisville	24.72	23.93	23.77
Baltimore	21.98	23.24	25.94
Savannah	30.73	23.26	..
Cleveland	20.35	23.45	20.37
Detroit	22 85	24.81	23.20
St. Paul	27.04	25.24	24.81

On the face of the returns the above would bear out the contention that while the banks at the eastern cities have pursued a liberal policy, the tendency at western and southern centers has been to strengthen their reserves as much as

possible. Hence the rise in the percentages of New Orleans from 24.8 per cent. to 27.22 per cent., of St. Paul from 25.24 per cent. to 27.04 per cent., of Minneapolis from 24.33 per cent. to 26.24 per cent., and of Savannah from 23.36 per cent. to 30.73 per cent.

WHEAT STOCKS GAIN SLOWLY.

Wheat supplies in this country and Canada in November showed the smallest gain reported in that month for five years past, the increase being only 3,816,000 bushels, as against a gain of 5,075,000 bushels in the same month a year ago, of 9,329,000 bushels in 1905, and of 12,123,000 bushes in 1904. The statistics of stocks held in the United States and Canada, east and west of the Rocky mountains, on December 1, 1907, compare with the same period of the four preceding years as follows:

	East of Rockies	*Pacific coast*	*Total American visible*
December 1, 1907	63,880,000	6,616,000	70,496,000
December 1, 1906	75,378,000	2,689,000	78,067,000
December 1, 1905	61,694,000	5,866,000	67,560,000
December 1, 1904	53,516,000	3,733,000	57,249,000
December 1, 1903	51,236,000	3,591,000	54,827,000

Owing to the very moderate movement in the past few months, the total American stock on December 1 was 70,496,000 bushels, a decrease of 7,571,000 bushels from December 1 a year ago. Just how the stocks are divided between this country and Canada appears in the following table:

1907	*United States*	*Canada*	*Total*
January 1	59,188,000	24,049,000	83,237,000
February 1	56,403,000	25,058,000	81,461,000
March 1	53,082,000	27,292,000	80,374,000
April 1	53,112,000	30,385,000	83,497,000
May 1	54,450,000	26,941,000	81,391,000
June 1	53,633,000	19,536,000	73,169,000
July 1	49,131,000	16,419,000	65,550,000
August 1	51,549,000	12,114,000	63,663,000
September 1	57,674,000	8,756,000	66,430,000
October 1	56,995,000	5,850,000	62,845,000
November 1	53,384,000	13,296,000	66,680,000
December 1	57,641,000	12,855,000	70,496,000
1906			
January 1	57,672,000	19,473,000	77,145,000
February 1	58,180,000	20,266,000	78,446,000
March 1	54,051,000	21,377,000	75,428,000
April 1	49,082,000	21,482,000	70,504,000
May 1	42,878,000	12,303,000	55,181,000
June 1	34,996,000	8,700,000	43,696,000
July 1	28,936,000	6,181,000	35,117,000
August 1	39,518,000	3,591,000	43,109,000
September 1	42,989,000	2,565,000	45,554,000
October 1	47,518,000	17,074,000	64,592,000
November 1	49,153,000	23,839,000	72,992,000
December 1	54,804,000	23,263,000	78,067,000

The responsibility for the gain in November stocks, small as it was, rests entirely on the United States, and the bulk of this occurred on the Pacific coast. Canadian stocks actually declined in November.

The following figures compare the American and Canadian stocks of wheat on or about the first of each month since January 1, 1905, with those held in Europe on the same date, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,9	83,0	88,1	86,7	163,4	163,5	138,6
April 1	83,5	70,6	46,4	83,6	90,7	89,8	167,1	161,3	136,2
May 1	81,4	55,2	38,5	86,8	87,7	86,2	168,2	142,9	124,7
June 1	73,1	43,7	29,0	82,5	82,7	82,4	155,6	126,4	111,3
July 1	65,5	35,1	19,0	71,3	74,7	80,2	136,8	109,8	99,2
August 1	63,7	43,1	20,9	62,3	62,7	72,1	126,0	105,8	93,0
Sept. 1	66,4	45,6	22,8	63,8	70,7	73,0	130,2	115,9	95,8
Oct. 1	62,8	64,6	38,6	71,2	83,2	80,2	134,0	147,8	118,8
Nov. 1	66,7	73,0	58,2	76,7	90,1	75,9	143,4	163,1	134,1
Dec. 1	70,5	78,1	67,6	74,3	89,7	83,8	144,8	167,8	151,4

European stocks of wheat fell off 2,400,000 bushels in November, as against a loss of 400,000 bushels in November a year ago, and a gain of 7,900,000 bushels two years ago. The world's supply appears to have increased only 1,400,000 bushels in November while gaining 4,700,000 bushels in November last year, and the total stock of 144,800,000 bushels on December 1 this year is now 23,000,000 bushels smaller than on December 1, 1906, and 6,600,000 bushels smaller than on December 1, 1905.

WESTERN UNION'S EARNINGS AND DIVIDEND.

One of the unsettling influences in the stock market during the early portion of the present week was the degree of doubt which prevailed regarding the dividend policy of the Western Union Telegraph Company. The record of that organization as a dividend payer has been a very consistent one, a 5 per cent. annual rate having been maintained uninterruptedly since 1887, the only variation consisting of the payment of 5¾ per cent. in 1890, and of an additional scrip dividend of 10 per cent. in 1892. It has been recognized, however, that the earnings of the company this year suffered materially owing to unfavorable business conditions, and more particularly to the strike of the telegraph operators. In fact, the quarterly statement for the three months ending September 30 showed that the cash dividend for that period was not earned by nearly $2,000,000. Somewhat better results were expected for the December quarter, but the figures made public for that period on last Wednesday confirmed the general impression that it would be unwise to pay the regular 1¼ per cent. in cash, and in fact there was a prevalent idea that the dividend might be passed altogether. The actual result was that the directors determined to maintain the 1¼ per cent. rate, but made it payable in stock, the necessary amount being taken out of the $2,630,000 of its own shares which were held in the treasury. The statements for the December and the September quarters respectively are as follows, compared with similar periods last year:

Quarter ending December 31	1907	*Changes*
Net revenue	$1,000,000	Dec. $616,791
Interest on bonds	433,063	Inc. 100,375
Balance	565,937	Dec. 717,166
Dividend (1¼ per cent.)	*1,217,025	Inc. 1
Deficit	650,088	Inc. 717,167
Previous surplus	14,923,200	Dec. 2,036,335
Total surplus	14,273,112	Dec. 2,753,502

* Payable in stock.

Quarter ending September 30	1907	*Changes*
Deficit	$311,493	Inc. $1,972,011
Interest on bonds	433,063	Inc. 100,376
Deficit	744,556	Inc. 2,072,387
Dividend (1¼ per cent.)	1,217,025	Inc. 1
Deficit	1,961,581	Inc. 2,072,388

An interesting statement by President Clowry accompanied the declaration of the dividend, his remarks bearing upon the conditions which the telegraphers' union aimed to establish in starting the strike, the gist of the matter being that the union proposed to control the business of the company in all respects. This made it a matter of vital necessity that the company should combat the labor organization to a finality, and having been successful in that respect, it is asserted that the immediate future of the corporation is more promising in respect to earnings.

EDITORIAL NOTES.

It will be recalled that the trouble which befell the Mercantile National Bank under the Heinze-Morse management was the starting point for the financial crisis which for the past two months has afflicted the entire country. The helping through of that institution and the change in its management, as well as in that of the National Bank of North America, it is generally conceded, averted positive disaster to both; but there has been a general belief that some further radical changes were likely in respect to the two banks in question. Suggestions that the Mercantile National Bank should be merged with some other institution have been heard; but a new turn has been given to the situation by the action taken by people interested in the Mercantile National. When the Heinze-Morse interests in question were forced out of the management at the behest of the New York Clearing House committee, they retained a large amount of their stock holdings. The events in connection with the entire trouble have, however, been of a character destructive of values, and it is said that present prices offered for the stock are below the real book value of the organization's assets. One suggested way out of the trouble has been that the bank be liquidated, but another suggestion contemplates a merger. Some interests other than the controlling Heinze Morse people have broached the liquidation proposition and have suggested that another national bank might be intrusted with this necessary task. A special meeting of the stockholders has been called for January 7, at which the matter will be decided. It is also to be noted that plans are said to be on foot for a merger of the National Bank of North America with the Consolidated National Bank. In short, the outlook is that the number of the larger banks at New York will be reduced, in all probability, by two, as one result of the recent disturbances. In addition, the Beaver National Bank, a small institution started about a year ago, is expected to liquidate and go out of business.

Among the notable features of the recent depression in the stock market is the large amount of outright purchasing of the shares of both railroad and industrial organizations by investors, particularly by people whose funds allowed of only taking a limited amount. This "odd lot" business has, in fact, amounted to an aggregate which has fairly surprised Wall street. It is, of course, impossible to make any estimate of the total amount of stocks which have thus been taken out of the market and transferred to the names of investors throughout the country. Some of the figures which have been given out by leading railroad companies as to the increase in the number of their stockholders since January 1 are rather illuminating. The accompanying tabulation displays the change in the number of stockholders of several of the powerful railroads:

	Number Jan. 1,'07	*Present number*	*Increase*	*Inc., p. ct.*
Baltimore & Ohio	6,700	10,300	3,600	53
Chesapeake & Ohio	1,200	2,200	1,000	83
Chicago, Mil. & St. Paul	8,800	11,300	2,500	28
Erie	8,000	10,500	2,500	31
New York Central	10,000	18,000	8,000	80
Northern Pacific	4,000	9,000	5,000	125
Pennsylvania	42,000	52,600	10,600	25
Reading	6,000	7,914	1,914	31

A resolution was adopted by the Senate on Tuesday calling upon the President for all information in his possession relating to the declared imports from Germany to the United States as shown by invoice digests of American consuls for the months of July, August and September of the present year, compared with the imports from Germany for the corresponding months of 1906. It may be noted that in response to many inquiries requesting information of this nature, the Bureau of Statistics of the Department of Commerce and Labor has collated detailed statistics of the trade of the United States with Germany for four months of the present fiscal year, compared with the preceding one, together with totals for the four months in the years from 1903 to 1907, inclusive. It appears from the figures given that the imports from Germany to the United States increased in value in the four months from July to October, inclusive, from $40,772,825 in 1903 to $56,983,389 in 1907, while the exports to Germany increased from $60,055,812 in the former to $78,071,690 in the latter year. The leading imports from Germany in the four months this year were, in order, toys, manufactures of silk, paper and manufactures thereof, earthen, stone and china ware, cotton laces, edgings, etc., coal tar colors and dyes, and gloves of kid or other leather, all being dutiable. Among the exports to Germany, the most important in point of value were, in order, unmanufactured cotton, which amounted to almost a third of the whole; copper ingots, bars, plates, etc., wheat, lard, tobacco leaf, stems and trimmings, corn, illuminating oils, oleo and oleomargarine, resin, lubricating and heavy paraffin oils, and fertilizers. Thus far the figures indicate a constant though not an absolutely steady increase for the five-year period.

Owing to the prompt dispatch of a force of federal troops to Goldfield, Nev., on the request of the governor of Nevada, very general attention has been drawn to the labor situation at that point. From the tenor of the dispatches thus far received, it would seem that a military force was needed for the protection of life and property from the lawless element among the striking miners, and that the adoption of such action by the authorities was timely, the situation being apparently well in hand before any serious damage had been done to the mines. The situation at Goldfield is, in fact, in many respects an interesting one. The Mine Owners Association, it is announced, are determined to conduct their business upon the open-shop principle, though intimations are given that although they utterly refused to recognize the Western Federation of Miners, they would be perfectly agreeable to having a union established in the camp affiliated with the American Federation of Labor. It is also to be noted that the mine owners propose to establish stores in connection with their mines unless the absolutely extortionate prices for all the necessaries of life now charged by local tradesmen are reduced to a reasonable level, thus permitting a reduction in wages. Beyond this, however, it is asserted that the intention is to reform the Nevada mining camps, to do away with "high-grading"—that is to say, the stealing of pieces of ore carrying large amounts of gold—the elimination of the fraudulent assayers, who act as "fences" for the purloiners, and also to suppress various other features which recall the wildest days of the California gold excitement in the early fifties, so that Nevada mining industries can be conducted like any other legitimate business in other parts of the country.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Paint—Adulteration—State Statute.

The Supreme Court of the United States has upheld, in the case of Heath & Milligan Manufacturing Company vs. Worst, the validity of the North Dakota statute of 1905 prohibiting the adulteration of white lead and mixed paints.

Action—Penalty—Transfer—Railway.

The Appellate Division of the New York Supreme Court for the Second Department held, in the case of Bull vs. New York City Railway Company, that one who rides on a street railroad for the purpose of finding out whether transfers are refused cannot maintain an action for the penalty for refusal, prescribed by section 104 of the Railroad law, where he has been refused a transfer.

Trade Name—False Representations.

The United States Circuit Court of Appeals held, in the case of Memphis Keeley Institute vs. Leslie E. Keeley Company, that the proprietor of a medicine or remedy made in accordance with a secret formula, which knowingly makes false and fraudulent representations as to the ingredients of such remedy to the public through its advertisements and labels, cannot maintain a suit in equity to protect its business of selling or administering such remedy from invasion and injury by another.

Will—Continuing Testator's Business.

The Appellate Division of the Supreme Court of New York for the Second Department held, in The Matter of Froelich, that under a provision in a will authorizing trustees to continue a business "as long as the net profits of such business shall yield 10 per cent. upon an investment of $50,000," the trustees were justified in continuing the business for a sufficient length of time to determine by honest effort to make the business a success, whether as a whole it was a paying one, and that they were not required to close out the business because of temporary and unexpected losses, or because for a given year it might run at a loss.

Stockholders' Liability—Exemption.

The New York Court of Appeals this week rendered a decision in the case of Hibbs vs. Brown affecting the right of joint-stock associations to issue bonds limiting the liability of their members. The case involved the legality of certain bonds issued by the Adams Express Company. The court, though holding that a bond or contract might be drawn by a joint-stock association which would limit the liability of its members, decided that the bonds in question did not contain a valid exemption of the liability. The bonds in question contained a clause absolving the members from personal liability, but the court ruled that the exemption was repugnant to the purpose for which the bonds were issued.

Mail Trains—State Commission.

The Supreme Court of the United States held, in the case of The Atlantic Coast Line Railroad Company vs. Board of Railroad Commissioners of South Carolina, that a railroad company cannot be compelled on the order of a state railroad commission to stop its fast mail trains when engaged in interstate commerce. Certain citizens of the town of Latta, S. C., sought to have two such trains which passed through the town daily compelled to stop on being flagged at that station, and the commission ordered that stops should be made whenever the signal was given. This action of the commission was resisted by the railroad as being unreasonable and as constituting an interference with interstate commerce. The Supreme Court of South Carolina decided against the railroad company, but its decision has now been reversed by the Supreme Court of the United States.

Bank—Stock Book—Inspection.

An interesting decision was rendered by the Appellate Division of the New York Supreme Court on December 6 in the case of People ex rel. Hunter vs. National Park Bank. In this case it appeared that the relator, who owns four shares of the stock of the bank, applied to the bank, under section 29 of the stock corporation law, for permission to examine the list of names of owners of stock contained in its stock book, and upon his application being refused brought suit to compel the bank to exhibit its stock book, and secured from a Special Term of the Supreme Court a mandamus compelling the officers of the bank to grant his application. The Appellate Division reversed this action, holding that when a bank or corporation withholds its stock book from a stockholder on the ground that the demand is not made in good faith, a peremptory writ of mandamus should not be granted to compel the inspection without either requiring the applicant to frankly state his purpose in seeking it, or at least inquiring into the facts by a reference or otherwise. The case has been sent back to the Special Term for further action in accordance with the views of the Appellate Division.

Decision Against Ticket Scalpers.

The Supreme Court of the United States recently affirmed, in the case of Louisville & Nashville Railroad Company vs. Bitterman et al., the decision of the Circuit Court of Appeals for the Fifth Circuit granting an injunction restraining the appellees and others known as ticket scalpers from dealing in non-transferable reduced-fare railroad tickets. The court upheld the right of the railroad companies to sell non-transferable tickets, declaring that the conclusion could not be escaped that the right to issue tickets of the class referred to carried with it the duty on the part of the carrier of exercising due diligence to prevent the use of such tickets by other than the original purchasers, and therefore caused the non-transferable clause of the law to be operative and effective against anyone who might wrongfully attempt to use such tickets. Indeed, the court said that it might well be questioned whether the purchaser of such a ticket acquired anything more than a limited and qualified ownership thereof, and whether the carrier did not for the purpose of enforcing the forfeiture retain a subordinate interest in the ticket amounting to a right of property therein which a court of equity would protect.

Insurance—Estoppel—Waiver.

A policy in a coöperative fire insurance company provided that if a loss occurred from an open fire built within fifty feet of the building, the company would not be liable for the loss. A loss occurred from a fire built within forty feet of the building, and the insured gave notice to the company in accordance with its by-laws. Several directors of the company, after looking over the place of the fire, notified the insured that they could not adjust the loss, but would make out proofs of loss to be presented to the board of directors. He was thereafter notified by one of the directors of the date of the meeting of the board, and that he was desired to be present. He traveled forty miles to the meeting, was examined as to the loss, and was then told he was excused. The loss was not adjusted and the insured brought action to recover the amount of it. The New York Court of Appeals held (Draper et al. vs. Oswego County Fire Relief Association) that the trouble and expense incurred by the plaintiff, the insured, in presenting his claim to the board could not be charged to any action of the company; that nothing in its conduct estopped it from denying that the loss fell within the terms of the policy, and that the doctrine of waiver did not apply to such a case.

Employers' Liability Insurance—Notice.

Under a policy of employers' liability insurance containing a provision that the insured shall give immediate notice in writing of an accident or claim with full particulars to the insurance company, there is cast upon the insured the duty of so regulating his business that he may be apprised with reasonable celerity of any accident that may occur. So held by the New York Court of Appeals in the case of Woolverton as President et al. vs. The Fidelity & Casualty Company of New York. The court held, however, that if, despite the exercise of reasonable care, the insured fails to acquire information of an accident until after a lapse of time, but on its acquisition gives prompt notice to the company, he complies with the obligation of the policy. On the other hand, a master employs many servants, and the duty of acquiring information of accidents is necessarily committed to servants or agents; as the acquisition of such information is an affirmative duty on his part, he is responsible for the negligence of the servants to whom he intrusts the duty. In the case before it the court held that there was sufficient to authorize the jury to find that in the ordinary and natural conduct of the business it was the duty of a servant acting as freight agent to receive reports of accidents and transmit them to the general superintendent of the insured, the New York Transfer Company, and that in such view the insured would be chargeable with the delay of the freight agent in reporting an accident of which he had received notice.

BUSINESS NOTES.

Population of Oklahoma.

Although not ordered until June 20, 1907, the census of the population of Oklahoma and Indian Territory was completed and the results reported October 1. As of date July 1, 1907, the population of the two territories, now the state of Oklahoma, was 1,414,177. In 1900 the population was 790,391 and in 1890 it was only 258,657. As reported for July 1, 1907, the population was distributed: Oklahoma, 733,062; Indian Territory, 681,115. The new state has 752,402 males, 661,775 females; 1,226,930 whites, 112,160 negroes, 74,012 Indians, 69 Mongolians and 6 Japanese. Of the males, 379,568 are twenty-one years of age or over. Of the females, 298,631 are twenty-one years of age or over. Of the larger cities the population figures are: Oklahoma City, 32,452; Muscogee, 14,418; Guthrie, 11,652: Shawnee, 10,955; Enid, 10,087.

Transportation by Water.

The census report covering water transportation for the calendar year ending December 31, 1906, summarizes the operations of all American craft of five tons or over. The record for the entire country shows that there were invested in this branch of transportation in vessels alone $508,429,621, that the gross tonnage is 13,021,171 tons registry, that the income in 1906 was $293,266,407, and that the amount of wages paid was $71,714,314. The quantity of freight carried was 267,701,231 tons. These totals are distributed as follows by coasts, including in the Great Lakes also the St. Lawrence river traffic:

	Atlantic coast and gulf	*Pacific coast*	*Great Lakes*
Number of vessels	20,019	2,525	2,965
Gross tonnage	4,877,522	963,077	2,391,042
Commerc'l valuation	$273,554,915	$76,035,133	$130,722,040
Gross income	$158,200,612	$48,220,874	$65,278,487
Employees on vessels	77,217	19,980	24,872
Wages paid	$38,394,455	$12,898,910	$13,257,378
Passengers carried	292,339,527	43,387,729	13,761,014
Freight carried	140,791,334	17,511,236	75,610,690

Cheese Prices and Sales.

The two characteristics of the cheese trade of New York state in the season of 1907, recently closed, was the light production and high prices. Sales at the three leading markets—Utica, Little Falls and Watertown—amounted to only 442,269 boxes, which compares with 521,713 boxes in 1906 and 496,961 boxes in 1905, the decreases being 15.1 per cent. and 10.8 per cent. respectively. Prices, however, were exceptionally high, the average for the season of 1907 at the three points mentioned being 12.3 cents per pound, as against 11.2 cents in 1906 and 10.5 cents in 1905. The highest quotation in 1907 was 16¼ cents, made at Cuba, and the lowest was 10.8 cents, scored at Utica. Thus the increased valuation materially offset the decreased production. The salient facts as to transactions at the three most important markets—Utica, Little Falls and Watertown—are set forth in the following tables:

UTICA.

	1907	1906	1905	1904
Total boxes	118,933	181,425	176,606	161,544
Average price	12.4c.	11c.	10.5c.	7.8c.
Highest price	15c.	13.2c.	12.5c.	9.7c
Lowest price	10.8c.	9c.	8.2c.	6c.

LITTLE FALLS.

	1907	1906	1905	1904
Total boxes	137,757	140,221	146,171	136,048
Average price	12.4c.	11c.	10.6c.	8c.
Highest price	15c.	13c.	12.7c.	9.2c.
Lowest price	11c.	9c.	8.2c.	6c.

WATERTOWN.

	1907	1906	1905	1904

Average price	12.2c.	11.5c.	10.5c.	....
Highest price	15⅜c.	13.2c.	....	....
Lowest price	11c.	9c.	....	....

Geography of South America.

The New York *Sun* remarks editorially that "many persons have very erroneous notions as to geographical sizes and lengths in South America. They have not the slightest idea that Brazil is nearly as large as the whole of Europe, that the distance between the north and south ends of Chile is as great as that between the North cape of Europe and Gibraltar, and that steamers ply almost straight north and south on the Parana and its Paraguay affluent for a distance about equal to that between New York and Omaha. Moreover, Paraguay is four-fifths as large as Germany. It is easy to see how depreciation of South America was encouraged. For many years map makers thought that South America did not amount to very much in comparison with North America and Europe, so while they were turning out map after map of different parts of North America and Europe on large scales, they would finally glance at South America and decide to crowd the whole continent into a single atlas sheet. This process made the great Amazon look very puny beside our widespreading Mississippi. As long as geographers and map makers were content to treat South America in this curt and summary fashion, there was, of course, a great deal of misconception about the continent. But the more we study the land the more interesting it appears to be, and the large maps now made of South America show that her distances are as magnificent as the wealth of resources she will in future years pour into the lap of the world."

Future Copper-Producing States.

The *American Review of Reviews* points out that "two tons of average iron ore will make one ton of metal, but it takes from thirty-three to seventy-five tons of copper ore to produce one ton of copper. Iron ore occurs in very large deposits, worked in some cases by steam shovels, whereas copper comes from comparatively narrow veins or irregular masses. In 1882 the western states attained prominence as copper producers, the lakes supplying 25,000 long tons, Arizona 8,000 long tons and Montana 4,000 long tons of copper. In 1887 Montana was first in production and has never been headed, with Arizona second and the lakes third in 1905. Before the civil war Tennessee was the chief copper state. In 1896 that state was credited with 3,750,124 pounds of copper, and 18,821,000 pounds last year. Utah added 39,712,000 pounds to the world's stock in 1906 and California 24,421,000 pounds. Alaska sent to the smelter 8,700,000 pounds of copper last year, and Utah and Nevada are the largest certain sources of new supply."

Metallic Iron in Ore.

Edwin C. Eckel, of the Geological Survey, takes issue with the deductions of some that there has been no marked annual decrease in the grade of iron ore, and in writing for the *Iron Age* on this subject he submits this table to show that there has been a decrease in the percentage of metallic iron in ore:

	Apparent consumption iron ore, gross tons	*Pig iron produced, gross tons*	*Tons of ore used per ton of pig made*	*Percentage of iron in ore*
1889	14,376,562	7,603,642	1.89	52.91
1890	16,302,025	9,202,703	1.77	56.50
1891	15,476,989	8,279,870	1.87	53.48
1892	16,032,687	9,157,000	1.75	57.14
1893	11,616,412	7,124,502	1.63	61.35
1894	11,600,393	6,657,388	1.74	57.47
1895	17,203,255	9,446,303	1.82	54.95
1896	15,765,128	8,623,127	1.83	54.64
1897	17,380,184	9,652,680	1.80	55.56
1898	20,708,604	11,773,934	1.76	56.82
1899	25,513,903	13,620,703	1.87	53.25
1900	26,722,583	13,780,242	1.94	51.55
1901	29,357,171	15,878,354	1.84	54.35
1902	35,886,921	17,821,307	2.01	49.75
1903	34,232,399	18,009,252	1.90	52.63
1904	30,224,910	16,497,033	1.83	54.64
1905	43,433,138	22,992,380	1.88	53.10
1906	49,355,343	25,307,191	1.95	51.28

Leading Broom-Producing States.

The Washington *Herald* quotes a manufacturer of Chicago as saying that Illinois furnishes the highest grade of brooms. "Kansas produces the cheaper brush, and most of it is shipped in bales to Illinois to be manufactured in the numerous broom factories. The broom-corn district in Illinois is confined principally to the central section, the counties of Douglas, Coles and Moultrie producing nine-tenths of the total crop. It is estimated that the crop in the United States this season will aggregate 50,000,000 brooms, valued at fully $10,000,000. To move this great product would require 200 trains of over fifty cars each, aggregating 100 miles of brooms. The broom-corn harvest has just ended in central Illinois, and material for 15,000,000 to 18,000,000 brooms was cut there this season. The brooms grown and manufactured in Illinois are the fancy kind that retail for from 25 to 40 cents. Down in Oklahoma they raise a coarser grade of brush, sufficient to manufacture about 25,000,000 brooms of the kind that sell for from 15 to 25 cents each. Kansas has about 5,000,000 brooms to its credit, and there is some brush grown in Missouri, Tennessee and Arkansas. Kansas favors a dwarf variety of broom corn, which is preferable for whiskbrooms. In fact, Kansas raises material for nearly all the whiskbrooms used in the United States. Nearly all the high-grade brooms are consumed in this country, the exports being generally of the cheaper quality. The people of Europe, in most instances, stick to the old-style brooms of twigs. They look askance at the modern American broom."

CURRENT BUSINESS NEWS.

Commercial.

The Department of Agriculture has issued a volume of statistics on wheat areas in leading countries. The report shows that in the United States in the last twenty-five years there has been an increase of only 9,600,000 acres, while there has been an increase of 34,000,000 in population. In the Argentine there has been an increase of 13,400,000 acres, and an increase of 2,100,000 in population. In Australia there has been an increase of 2,900,000 acres in area, and 1,900,000 in population. In Canada the gain of acreage has been 3,800,000, and in population 1,400,000. The net result is that, on the whole, the wheat area in thirteen European countries, the United States, Argentine, Canada and Australia has increased more rapidly than the population, and that whereas twenty-five years ago there were 283 wheat-eaters, there are now 264 for the same extent of wheat-growing land.

Lake navigation closed Tuesday.

The London *Economist's* index number of average prices of commodities at the opening of December is 2,300, comparing with 2,314 on November 1. At the opening of June the *Economist's* index number stood at 2,601, the highest reported for any month or year since 1876. A comparison of the number reported December 1 is as follows:

December 1, 1907	2,360	December 1, 1906	2,501
November 1, 1907	2,314	December 1, 1905	2,227
October 1, 1907	2,457	December 1, 1904	2,181
September 1, 1907	2,519	December 1, 1903	2,138
August 1, 1907	2,571	December 1, 1902	1,969
July 1, 1907	2,594	December 1, 1901	1,959
June 1, 1907	2,601	December 1, 1900	2,188

The budget committee of the Austrian Reichsrath on Wednesday approved the bill reducing the duty on sugar 8 kronen.

Shipments of Canadian cereals from the head of the lakes during the season of 1907 amounted to 23,128,000 bushels, against 28,000,000 last year. Shipments of oats show a decrease of 200,000 bushels, while barley and flax show an increase. The detailed figures in bushels follow:

	Shipment	*Changes*
Wheat	20,193,000	Dec. 5,000,000
Oats	2,040,000	Dec. 200,000
Barley	518,000	Inc. 200,000
Flax	317,000	Inc. 100,000

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—The weather is very wet, and it is estimated that acreage under wheat will not show an increase over that of last year. France and Germany—There will be a full acreage planted, with the conditions satisfactory. Supplies are liberal. Hungary—Good rains have fallen. It is expected that this country will import some American wheat via Hamburg, owing to the fact that Argentina is without a commercial treaty. Roumania—Weather is favorable. The plant, however, is weak, and is likely to experience some difficulties during the winter. Russia—The conditions are generally unchanged from our last report, which was at that time unfavorable. In the Caucasus district the outlook for the crops is favorable. Italy, Spain and North Africa—The crop outlook is favorable. Australia—The exportable surplus is now placed at 16,800,000 bushels. A recent estimate placed the amount for export at 15,200,000 bushels, and this year's crop was estimated at 34,700,000 bushels. In 1906 the crop amounted to 66,000,000 bushels, and of this amount 34,000,000 was shipped for export. India—Still without rain, and it is thought there will be no wheat for export. Argentina—The weather is settled, but selling pressure has relaxed. Estimates regarding the exportable surplus are being maintained at fully 120,000,000 bushels. This is 28,000,000 less than the official estimate.

The Missouri December crop report makes the condition of wheat 85, against 82 last year. The acreage is 6 per cent. less on account of drought.

Among other acts passed by the Universal Postal Convention, which met at Rome, Italy, on May 26, was one for the issuance of "reply coupons" in most of the countries in the postal union. This went into effect on October 1, and the coupons are now making their appearance in business mail. The coupons are slips of paper, about two by three inches, on which is printed in half a dozen languages the statement that they "can be exchanged for a postage stamp of the value of 25 centimes"—or any other denomination, depending upon the country where they happen to be issued—"or the equivalent of that sum in countries which have adopted the arrangement." This means that when one desires to send stamps abroad to pay for a return message, instead of sending United States stamps, which would be useless, except as curiosities, one or more of these coupons can be inserted and much trouble saved.

With the record grain cargo for six years, and the third largest single shipment of wheat ever sent from a Pacific coast, the British steamship Aparima left Tacoma on Tuesday for Europe. The cargo consists of 273,636 bushels of wheat, valued at $250,000. Since the opening of the present grain season five big steamers have left Tacoma with wheat cargoes valued at $1,107,913.

The fire loss of the United States and Canada in November, compiled by the *Journal of Commerce and Commercial Bulletin*, shows a total of $19,122,200, or nearly three million dollars more than the sum chargeable against the same month of the preceding year. The following table gives a comparison, by months, of the losses this year with those of 1905 and 1906:

	1905	1906	1907
January	$16,378,100	$17,723,800	$24,064,000
February	25,591,000	18,219,350	10,876,600
March	14,751,400	18,727,750	20,559,700
April	11,991,350	292,501,150	21,925,900
May	12,736,250	16,512,850	16,286,300
June	11,789,800	13,950,650	14,765,000
July	13,175,250	12,428,050	18,240,150
August	11,435,600	9,641,600	20,248,000
September	13,715,250	10,852,550	11,449,400
October	12,267,000	13,872,450	13,350,250
November	16,178,200	16,248,350	19,122,200
Total, 11 months	159,019,200	440,708,550	199,887,500
December	15,276,600	19,001,450	....
Total	175,193,800	459,710,000	....

The November statement of the British Board of Trade shows increases of $6,990,000 in imports and $14,435,000 in exports. The principal increase in imports was in grain, but cotton from America decreased. The principal increase in exports was in coal and manufactured cotton goods.

The final estimates of the total acreage, production and farm values of the principal crops for 1907 will be issued on December 20.

The Michigan crop report for December shows the condition of wheat to be 83, as against 86 in November, and 86 in December, 1906.

The following table shows for each of the principal states the percentage of acreage sown to rye this fall as compared with that sown last year, the estimated acreage sown this fall, the average condition on December 1 of the present year, the corresponding average for 1906, and the mean of the December averages, for ten years:

	Acreage	*Acres 1907-8, prelim'y*	*Average condition Dec. 1, 1907*	*Dec. 1, 1906*	*Ten-year av'ge*
Michigan	96	369,000	88	92	97
Pennsylvania	98	350,000	88	97	98
Wisconsin	100	296,000	97	100	..
New York	93	146,000	92	98	96
Nebraska	95	91,000	90	99	..
Minnesota	102	92,000	94	97	..
New Jersey	99	78,000	84	98	94
United States	97.8	2,015,000	91.4	96.2	95.9

The Japanese government has declared Nagoya to be an open port from November 10, 1907. Nagoya is an island city near Kioto on the railway running between Yokohama and Kobe. The effect of the ordinance will be to allow foreigners to reside there.

This table shows the volume of our imports from and exports to Germany for the four months ended October:

	Imports	*Exports*
1907	$56,983,389	$78,071,630
1906	52,664,498	74,055,025
1905	45,597,525	73,485,705
1904	41,296,379	62,518,286
1903	40,772,825	60,055,812

Ellison estimates that British spinners' cotton stocks on December 1 were 376,000 bales, against 306,000 last year, and continental spinners' stocks 966,000, against 516,000 last year, a total excess in European spinners' stocks of 520,000 bales. Thus European mill stocks carried on December 1 are much larger than for some time.

Financial.

A few days ago the Chicago Great Western Railway gave the New York Stock Exchange the usual notice of the closing of its books for the payment of the regular semi-annual interest on its preferred A debenture stock. On Wednesday cancellation of this notice was received, which signified that the directors had decided not to pay the 2½ per cent. interest which has been paid since 1900. The payment of the January interest might be ordered at any time within the first six months of next year, and the interest due July 15 might be deferred for six months without the property passing into the hands of a receiver.

The Rand gold output for November was 549,000 ounces. The following table gives the output of Transvaal gold in fine ounces per month for 1899 (in October of which year the war broke out), and the monthly output in 1905, 1906 and 1907:

	1899	1905	1906	1907
January	365,961	369,258	428,638	537,000
February	361,038	363,811	407,668	493,000
March	394,002	399,823	443,723	538,000
April	390,706	399,166	439,243	537,000
May	395,886	416,395	461,202	524,000
June	396,573	412,317	375,975	507,000
July	406,096	419,405	491,793	532,000
August	409,198	428,481	509,115	555,000
September	361,251	416,487	505,111	518,000
October	16,749	415,527	540,600	553,000
November	51,982	424,757	533,373	549,000
December	62,154	431,594	550,000	....
Total	3,611,506	4,897,121	5,786,450	5,863,000
Monthly average	300,958	408,093	482,450	533,000

On Tuesday the directors of the Crucible Steel Company of America declared a dividend of 1 per cent. on its preferred stock for the quarter. The previous disbursement was 1½ per cent.

The finance department of Canada estimates the permanent investments of that country to amount to $437,000,000, although the population is less than 7,000,000. Of this the railways represent $99,000,000 and the canals about $90,000,000.

Japan has decided to increase taxes on oil, sake, sugar and tobacco to the extent of $30,000,000. There will be a curtailment in extraordinary expenses, including the army and navy.

The sale of a Boston Stock Exchange seat last week for $25,000 represents a decline of $13,500 from the high level of the year, which was the record price.

The following table, taken from the *Journal of Commerce*, gives a summary of the stocks, bonds and notes authorized each month this year, along with a comparison with the 1906 figures, three figures being omitted:

	Stocks, 1907	*Bonds and notes*, 1907	*Stocks*, 1906	*Bonds and notes*, 1906
January	$143,512	$185,500	$23,210	$68,904
February	29,060	84,760	36,110	241,296
March	202,322	24,550	131,808	41,400
April	63,608	112,954	48,250	133,881

August	143,890	144,500	32,792	34,166
September	32,450	44,081	32,497	13,450
October	43,650	54,000	17,162	20,501
November	49,050	122,189	33,261	34,253
Total	806,409	*1,196,179	474,697	827,398
Grand total this year				2,002,589
Grand total year ago				1,302,096
Increase				700,492

* Notes responsible for $292,442,000.

The Thompson-Starrett Company has passed the dividend on its common stock. The rate had been 2 per cent. quarterly.

On Wednesday the directors of the Westinghouse Air Brake Company declared the regular quarterly dividend of 2½ per cent. and an extra dividend of 2½ per cent., both payable January 31, 1908. The directors also acted on the resolution of the stockholders passed December 3 increasing the capital stock from $11,000,000 to $14,000,000. Out of the increase a 25 per cent. stock dividend was declared.

On Wednesday the directors of the Western Union Telegraph Company declared the quarterly dividend of 1¼ per cent. in the form of treasury stock instead of in cash.

A seat on the New York Stock Exchange was sold Wednesday for $63,000, an advance of $3,000 over the last previous sale, and of more than $10,000 over the low record for the year made a few weeks ago.

The London *Bankers' Magazine* gives this index number of prices of securities on the London Stock Exchange for the dates mentioned: Aggregate value of 387 representative securities on October 19, 1907, £3,506,083,300; on November 20, 1907, £3,456,720,000, which shows a decrease of £49,363,000 from October.

Directors of the Daly-West Mining Company on Monday declared a dividend of 30 cents a share, a reduction of 30 cents a share as compared with the previous payment, which was made September 15 last. The company has been paying dividends at the rate of 60 cents a share quarterly for several years.

Wm. A. Read & Co.
INVESTMENT SECURITIES
25 Nassau Street, New York
BOSTON CHICAGO BALTIMORE

The Alabama Coal & Iron Company has deferred payment of its quarterly dividend of 1¾ per cent.

The *Wall Street Journal* estimates that over $11,500,000 is represented in dividends that have been reduced, deferred or passed since the Erie's action in declaring scrip dividends on August 28. About one-half of the concerns passing, reducing or deferring dividends are copper-mining companies.

It is reported that Chile is passing through a financial crisis. The Banco Mobilario at Santiago, an important nitrate bank, is reported to have failed December 7.

Industrial.

The production of quicksilver in the United States in 1906 was 26,238 flasks of seventy-five pounds each, valued at $958,634, as compared with 30,451 flasks, valued at $1,103,120, in 1905, a decrease in quantity of 4,213 flasks, and in value of $144,486. Of the total product California furnished 20,310 flasks, valued at $730,808; Texas, 4,761 flasks, valued at $178,829; Utah, 1,164 flasks, valued at $48,888, and Oregon, three flasks, valued at $109. The decrease was due to the great falling off—more than 4,000 flasks—in the output of the California mines, as the Texas producers made a small gain, and those of Utah a somewhat greater one.

It is estimated that if the December production of anthracite coal is 5,200,000 tons, a figure which was exceeded in 1905, the total production this year will be more than 66,500,000 tons. The yearly output of marketable coal has been as follows (in tons):

1881	23,437,242	1901	53,568,601
1891	40,448,336	1902	31,200,890
1893	43,089,537	1903	59,362,831
1895	46,510,477	1904	57,392,522
1897	41,637,861	1905	61,410,201
1898	41,899,751	1906	55,698,575
1899	47,665,204	1907 *	66,500,000
1900	45,107,484		

* Estimated.

It is stated by the heads of the Order of Railway Conductors and the Brotherhood of Railway Trainmen that a demand will be made on the officials of about sixty-five railway lines east of the Mississippi by the beginning of January for a wage increase averaging 10 per cent. and an alteration in working conditions, but no strike will be precipitated.

It is estimated that November's production of copper in the United States, Mexico and Canada fell off 34,898,000 pounds as compared with November, 1906, or 36 per cent. So production of copper on the American continent during the eleven months of 1907 shows a reduction of 128,241,085 pounds, based on an estimated production for the eleven months of 953,868,240 pounds, against 1,082,109,325 pounds for the like period in 1906.

The *Iron Age* reports the output of pig iron in November at 1,828,125 tons, against 2,336,972 tons in October, the decrease being 508,847 tons, or 21 per cent. On December 1 the weekly capacity of furnaces in blast was 347,372 tons, the decrease from November 1 being 29 per cent., and the movement toward curtailment still continues. The production for eleven months aggregates 24,053,924 tons, an average of 1,479,000 tons over the like period in 1906.

Railroads.

The Pere Marquette stockholders have ratified the cancellation of the lease to the Cincinnati, Hamilton & Dayton, and the arbitration agreement, and approved the consolidation of the Pere Marquette with the Pere Marquette of Indiana. Out of 280,000 shares, 276,545 were voted. There will be no increase of capital stock. The new first preferred after 1910 will be entitled and limited to a cumulative preferential dividend of 4 per cent., and the second preferred will be entitled and limited to 4 per cent. preferential cumulative dividends, subject to prior payment of the first preferred dividends. The first meeting of the stockholders of the new Pere Marquette will be held the second Wednesday of April, at which a permanent organization will be formed. The plan of reorganization has been submitted to Judge Lurton of the United States Circuit Court and officially approved. There will be a $5,000,000 issue of five-year 6 per cent. debentures to pay the floating debts and receivers' certificates.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Cross currents in trade, finance and industry prevent generalization, but financial conditions generally have shown further easing, while the approach of the holiday period and more seasonable weather has helped retail distribution, which in some sections also feels the stimulus of price concessions. On the other hand, wholesale and jobbing trade has rather quieted, as attention has begun to concentrate upon retail distribution, and manufacturing industry has slackened slightly. In no branch of trade distribution or in industry are operations so brisk as at this date in recent years. Collections generally are very slow, and failures tend to increase in number.

In financial affairs the country is making gradual approaches to the normal. Advices from the country are better. Western banks are showing an increasing disposition to pay out currency, some inquiry for mercantile paper is noted on the part of interior banks at leading western centers, and some money has begun to return to Chicago. Savings-bank withdrawals are small where the embargo on drawing has been lifted, but gain to retail trade is noted where such withdrawals have been allowed. The premium on currency still persists at many cities, however, and this is variously assigned to window-dressing by state banks awaiting calls as to condition, and to the need, always felt at holiday seasons, for small bills. Issues of Clearing House certificates west and south are smaller; some issues are being reduced, and the volume of cashiers' checks is being reduced by withdrawals. At the metropolis the money rates are rather higher, as end-of-the-year necessities make themselves felt, and stock market speculation is thereby discouraged, making for dull and heavy prices. Gold is still being engaged abroad, and total engagements are above $100,000,000. Preliminary foreign trade returns for November are in excess of a year ago, breadstuffs and cotton exports gaining equally. Prices of many commodities show further strengthening from the low points reached at the height of the stringency in November, but the level of prices is now below a year ago. Railway earnings for November show a gain of 2.5 per cent. over November, 1906, but reports from the transportation interests are that traffic is slackening, and there is more idle equipment than for years past. Clearings show heavy decreases from a year ago.

Despite complaints of mild weather restricting regular retail distribution in seasonable lines, the turnover as a whole is larger, the spirit of the season making for freer purchases than in recent weeks, though the volume is below this date in recent previous years. As a further stimulus to retail trade, several cities note price concessions, varying with conditions. At wholesale, trade is quiet. This is a not unusual circumstance at this date, but finds accentuation in the prevailing desire of the trade to go slowly, pending a clearer view of the outlook for spring. There is less talk of cancellations, though there are evidences of these in many lines. To offset the possibility of large stocks accumulating, buyers are keeping their activities restricted, and this tendency is also reënforced by a fair volume of resales by jobbers who find surplus supplies at hand.

Among the industries a feature is the continuance of the better feeling in iron and steel, accompanied by some inquiry for near-future wants. Production is, however, being restricted, an example being furnished by the reports that pig-iron production in the Pittsburgh district is 40 to 50 per cent. of normal, while finishing mills are running to 60 to 70 per cent. of their capacity. Building has shown a heavy falling off and all materials are dull. Lumber is quiet and weak, and there are reports of a quite general shutdown of mills in the south. A similar condition is reported in the Pacific northwest, and logging operations this winter bid fair to be greatly restricted. Curtailment of output is quite general among the textile industries, and many New England mills in other lines are restricting output. This is especially true in metal working, shoe manufacturing and other lines.

Commodity prices have moved irregularly this week, but, on the whole, displayed fair recoveries from early weakness. Cotton was relatively most active, on some days, indeed, being excited. There was some liquidation at the outset of the week on nervousness regarding the ginning report on Monday and the Agricultural Department estimate of Tuesday. The ginning report had only a slight effect, being bullish as a whole, except as showing a smaller number of ginneries reporting, but the estimate of 11,678,000 bales of 500 pounds gross as the crop caused a drop of 49 to 54 points at one time, and the close on Tuesday was 44 to 47 points off, higher money and lower stock market prices helping the decline slightly. In the latter part of the week the feeling was better on overselling and a claim that 500 pounds gross means 478 pounds net, which would make the estimate only 11,163,000 bales, and prices rallied 25 to 35 points, while spots regained 25 points of the 30 points lost on Tuesday.

Wheat prices weakened slightly early in the week on good-sized increases in the world's visible stocks, weak cables and lack of export inquiry, but steadied later and regained most of the loss on claims of small invisible stocks at the northwest and a smaller than earlier expected Argentine surplus. Especially helpful in steadying values late in the week was the strength of corn, which advanced ½@1 cent on poor husking returns, reports of "soft corn" at the west, and covering in sympathy with the sharp upturn in the coarser cereal. Oats were slightly firmer. Coffee was slightly firmer, but without much change. Sugar demand and prices have improved with the easing in the financial situation, the buying by independent refiners, and the less satisfactory weather reports from Europe. Raws are up near ¼ cent and refined is firmer.

Old and new crops have been reported upon this week. The cotton yield for 1907 is placed by the government at 11,678,000 bales of 500 pounds gross weight, a standard of measurement unknown to the trade and therefore hard to definitely weigh, but because the government estimate for three years has been 1,000,000 bales smaller on the average than the commercial crop, the trade received it as a bearish feature, temporarily at least, and the price of that staple broke 50 points, to recover most of it later in the week. The ginning report of December 1 pointed to 8,338,854 bales ginned, a decrease of 16.8 per cent. from 1906, as against an estimated decline in yield by the Department of Agriculture of 13.8 per cent. from the commercial crop of 1906. The winter-wheat crop condition was reported at 91.1, as against 94.1 a year ago, with an area of 31,069,000 acres, or 596,000 acres below what was planted a year ago. This is figured to point to a crop of 490,000,000 bushels, as against an actual outturn of 409,500,000 bushels this year. The condition is 2 points below the ten year average. The condition of rye is placed at 91.4, as against 96.2 a year ago, and the acreage is 2.2 per cent. less.

The November reaction in trade demand and industrial activity found prompt reflection in commodity prices, which moved downward more sharply and generally than in any month for years past. BRADSTREET'S index number as of December 1 was $8.5246, a decrease of 2.5 per cent. from November 1, of 6.6 per cent. from the high-level period of March 1, 1907, of 4.2 per cent. from December 1, 1906, and of 2.6 per cent. from December 1, 1905. The index number is, however, still 3.5 per cent. above February 1, 1900, a high-level date, and is 49 per cent. higher than the low-level date of July 1, 1896. Sixty out of 105 articles declined during November and only twelve advanced, only one group—textiles—out of thirteen advancing during that month. Miscellaneous products, hides and leather, food products and live animals were relatively weakest.

Some improvement is noted in leather, but trade is not equal to a year ago at this date. Prices hold up fairly well despite some price concessions. Hides are very low—almost at the bottom, it seems—and tanners will buy if they can get the money to do so. Shoe manufacturers are buying only from hand to mouth, expecting a recession in raw materials, and shipments are at a low point. Eastern shipments are 6.3 per cent. behind 1906.

World's wheat stocks increased only 1,400,000 bushels in November, as against a gain of 4,700,000 bushels in November a year ago, and the total stock on December 1 was 144,800,000 bushels, a decrease of 23,000,000 bushels from December 1 a year ago.

Building activities fell off sharply in November, the total expenditures for that month at seventy-four cities totaling $27,081,103, a decrease of 39 per cent. from October, 1907, and of 32.5 per cent. from November, 1906. Only twenty-five out of seventy-four cities showed larger expenditures this year than last, in November.

Wool has sold more freely at Boston this week, and the heaviest sales for months are reported. Manufacturers are reported asking for quick shipments, which indicates that their stocks are not heavy. Dealers' stocks are reported well cleaned up. Territory wools are most active because in largest supply, and stocks are claimed to be lighter than a year ago. London wool sales show 5@15 per cent. lower prices, fine merinos showing least weakness.

Sentiment in the iron and steel trade is quite favorable. Nevertheless, new business in pig iron is very light, prices are weaker and outputs are being restricted. In fact, the weekly blast-furnace capacity has declined 29 per cent. in one month, the figures as of December 1 being compared with those of November 1, and if comparison is made with July 1, the high point of the year, the decrease is 34 per cent. Some southern iron has been sold in the central west for $14, No. 2 Birmingham, but it is said that this price could be shaded. Sales of small quantities of basic, foundry forge and low-grade pig iron have been made in the east at concessions in prices. It is expected that the new specifications on steel rails for 1908 will be announced within a short time, and in consequence a fair quantity of new business is looked for, several roads having already made reservations. As it is, the Erie Railroad Company is reported to have ordered 25,000 tons. Business in structural material is fair and additional orders are pending. Although German makers have reduced prices, the reported prospect of importations from that source are not seriously regarded. Prices on plates are being cut. Demand for wire products is better, and the situation as regards tinplates has improved. While some business has been placed for cast-iron pipe, prices are down $1 per ton. Old material continues very dull and quotations are still receding. Bituminous coal is easier. Production of coke is at low ebb, with demand for foundry grades light, and prices are unsettled. Copper, tin, spelter and lead are weaker. Production of copper is being still further restricted, but European holders display considerable pressure to sell on a declining market.

Stock market transactions at New York have been on a reduced scale, and renewed bearishness has prevailed in connection with speculative sentiment, due to high rates for money and resulting liquidation of holdings in both the standard railroad and industrial stocks. The declaration of scrip dividends by the Western Union and Atlantic Coast Line companies also had a bad effect. London was a seller of stocks in New York. At the end of the week the market is dull, with a heavy tone. Bonds are again inactive, with concessions in prices for the more prominent issues. Foreign exchange is steady at 4.85.50 for demand sterling. Gold engagements for the week aggregate $3,250,000.

Bank clearings for the week ending December 12 aggregate $2,271,351,000, a decrease of 8 per cent. from last week and of 31.6 per cent. from this week last year. Outside of New York exchanges amount to $951,618,000, a decrease of 6 per cent. from last week and a loss of 18 per cent. from the week last year.

Business failures for the week ending December 12 number 284, against 272 last week, 220 in the like week of 1906, 226 in 1905, 239 in 1904 and 239 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending December 12 aggregate 6,185,573 bushels, against 6,192,241 bushels last week, 4,383,957 bushels this week last year and 3,879,809 bushels in 1901. For the twenty-four weeks of the fiscal year the exports are 102,860,633 bushels, against 87,969,670 bushels in 1906-07 and 135,565,928 bushels in 1901-02. Corn exports for the week are 475,824 bushels, against 1,187,276 bushels last week and 1,381,774 bushels in 1906. For the fiscal year to date the exports are 22,140,173 bushels, against 20,844,517 bushels in 1906-07.

IN CANADA.

Holiday trade is good in Canada, and the situation in some respects is brighter because of the easing in money, but the latter is still scarce and dear in the northwest, and there is much complaint of an excess of labor, skilled and unskilled. The tendency is for rather less activity in the industries, and lumbering and mining are quieter, especially in British Columbia. A fair trade is doing at wholesale for spring delivery, and values are steady. Collections are, on the whole, better, and are expected to improve after the holidays. Canadian building (four cities reporting) in November aggregated $1,070,800, a decrease of 20 per cent. from October, 1907, and of 60.5 per cent. from November a year ago. Failures for the week number 50, as against 26 last week and 31 this week a year ago. Clearings for the week aggregate $89,374,000, a decrease of .3 per cent. from last week and of 2 per cent. from last year.

TRADE REPORTS.

Wholesale trade at New York is quieter than usual at this date. Retail and holiday trade is better than last week, but not equal to last year. Business in dry goods is only of moderate volume, and little activity is expected for the balance of the year. Retail houses are buying very carefully and are apparently desirous of reducing stocks. Woolen goods for men's wear are exceedingly quiet, probably worse than any other line. The cotton-goods departments are also doing much less business than formerly, although prices are lower. Silks and dress goods are probably in better request than anything else. Owing to the closing of quite a number of mills throughout the country and the small amount of purchasing that is being done, there will be no accumulation of merchandise either in the hands of the commission merchant, jobber or retailer, and there is quite a number who believe that the month of January will show some resumption of trade. While collections generally are backward, still they are not looked upon as bad; on the contrary, they are much better than it was thought they would be. Raw silk continues very quiet. Manufacturers of shirts, neckwear, etc., report a disposition to

cancel orders for delayed shipments of spring goods. Jobbers say that sales for immediate delivery have fallen off considerably. Some think this will be temporary, but others believe that it will continue through the spring season. Business has not come up to expectations in the fur trade, but while retailers in general have done less than in former years, no considerable cutting of price has taken place. A number of furs will, however, be carried over to next season. The financial situation has somewhat improved, but collections are still slow. The retail millinery business is doing fairly well and has not suffered so much from the financial depression. Manufacturers of artificial flowers and feathers are doing a good business. In wholesale notions the tendency is to buy close, and collections have not improved to any material extent. Wholesale grocers say sales are falling off, and orders come only for needed stock to replace goods sold. Retail trade is, however, active, and as a rule prices are strong, but collections are still backward. Flour is quiet, jobbers buying sparingly, as they find some difficulty in financing. The market for live stock and dressed meats has improved. Receipts about equal demand. Prices have been reduced for all grades, and prospects for the winter trade are deemed much brighter. Best qualities of butter are scarce and the market is firm. Receipts of fresh eggs continue light and prices are strong. Refrigerator eggs are heavy and 1 cent lower. In the hardware trade manufacturers of and dealers in hardware stocks are getting low and they anticipate a good spring trade. Collections have been better and conditions are more encouraging. In the tin and enameled ware trade manufacturers are taking advantage of quiet business to increase their stocks, which have been low for some time past. In the old-metal trade there is practically no business. Copper producers have still further curtailed the output, and few transactions are reported. Pig tin is lower in price, as is also pig lead. The machinery trade is quiet, but manufacturers of electrical goods are doing a fair business. There is some improvement in the tobacco trade, but collections are still slow. Conditions in the leather trade show no improvement. The supply of hides is ample for requirements. Collections are fairly good. Real estate is dull, and builders are doing nothing to speak of. The wholesale paper trade reports a seasonable business, but not quite so good as was anticipated. Collections, though still slow, show some improvement.

The following telegrams show trade conditions at the cities mentioned for the week ending December 13:

BOSTON.—Dry-goods business is quiet and there is general indisposition on the part of jobbers and retailers to buy, except to meet immediate needs. Retail trade in dry and fancy goods and wearing apparel has been very fair on days of favorable weather, but has been checked by days of unseasonably mild or stormy weather. The cotton goods market appears to be held in control by efforts made by manufacturers to prevent the breaking down of prices. In some instances commission houses are making concessions in prices. There is in the trade a growing feeling of confidence in the financial and business situations. The market for chemicals as a whole is not brisk. Nitrate of soda is dull and easier. The movement in drugs is of moderate proportions. Quinine is fairly steady, while opium is quiet. Dyestuffs and tanning materials are without notable features. Anthracite coal is in good demand, and better business is in prospect. In the bituminous market stocks are more plentiful and prices a little lower. Retail trade in hard coal is better. Business continues quiet in northern and eastern lumber, and there is little activity in western lumber and hardwoods. There is some decline in prices for certain qualities. Southern lumber is very quiet. Iron and metals generally are dull, and in builders' supplies business is quiet. As usual at this season of the year, painters' supplies are quiet. The recent decline in the prices of apples has resulted in considerable loss to dealers and growers, who had been holding large quantities in reserve. The export business has continued fairly good, but strictly first-class fruit is demanded.

PROVIDENCE. — There is some improvement in the manufacturing jewelry trade. Collections in this line are slow, but it is hardly time to expect much of any returns until the first of the year. The machinery and tool trade is quiet. General retail trade is quite good. Holiday stocks are in and a considerable business is being done, all conditions considered, and this is better than was anticipated three weeks ago. Wholesalers of notions and light dry goods report a marked increase in the volume of trade in the last ten days.

PORTLAND, ME.—The weather continues too warm for heavy goods distribution. Financial conditions are about normal.

NEW HAVEN.—Business has fallen off in almost every line. Factories appear to be especially affected, and in many instances are being operated on reduced time. Collections are very slow.

PHILADELPHIA.—Textile trades show no improvement. Manufacturers generally look upon the depression as purely fictitious and expect a general resumption of buying after January 1, but at present there is no new business to speak of, and this applies equally well to the dry-goods jobbing trade. Collections are poor. Large retailers are doing their usual holiday trade and expect results to equal last year. Smaller retailers are doing fairly well, but complain that buying is not quite so active as the season should call for. Manufacturers of cloaks and suits continue dull, but a good spring season is anticipated. Manufacturers of shirtwaists report conditions rather unfavorable, and many are running their plants with reduced forces. Hides and skins show an improved tone, there being a fair demand during the past week, with firmer prices and full supply. Goatskins continue dull and inactive, buyers being out of the market. Leather shows no appreciable change, the demand being quiet, but prices are maintained. Shoe dealers report increased business in seasonable lines, and conditions are now favorable to an improved demand, prices being steady. Flour rules weak, buyers and consumers having adopted a waiting attitude, and the market lacks snap. Chemicals and dyestuffs are moving very slowly, buyers taking only what they really need. Paints and glass are quiet, though there is still a good volume of business being done. Lumber dealers are slack, and no particular improvement is looked for for the next month or two. The year has been a good one, however, and basic conditions are sound and healthy. Cement is still unsatisfactory and production is much restricted. House-furnishing business continues good, and the general aspect of the trade is favorable at this time. Jewelry continues in good demand, and prospects are encouraging. Tobacco orders usually placed at this season for January delivery are small, buyers preferring to wait and see what the price is then. Stocks are daily used up closer, and a brisk market is looked for early next year, which may make firmer prices. Liquors in bond are not offered, as holders do not care to shade prices, nor are they asked for, as the necessary cash is hard to obtain. Wholesalers are moving some tax-paid goods for holiday trade, but only about what will carry over; dealers are disposed to buy small and often, rather than lay in stocks ahead. There is a slightly stronger tone in iron and steel, and while the volume of actual business continues moderate, there is certainly more interest being evinced in future deliveries. Prices are unchanged, and it is a matter of favorable comment that changed conditions are being accepted and gone through, with so little financial embarrassments. There is a lull in coal, the bituminous market especially being quiet, and the demand for household purposes also has not been quite so brisk. Prices are firm and collections fairly easy. Demand for currency is greater than the supply, and purchases are being made in New York at 1 per cent. premium. Sales of commercial paper are of smaller volume than last week. Best names are quoted at 7½ to 10 per cent. Demand comes almost entirely from interior banks. Mercantile collections are very slow. Banks are renewing loans for customers freely at 6 per cent. Volume of general business estimated at 20 to 25 per cent. less than same time last year. The money market is closer than last week, owing to accumulations being made for January interest and dividend disbursements. Mercantile failures are not numerous. There is no disposition to press past-due accounts.

PITTSBURGH.—There has been more inquiry in the pig-iron market, and a rather better feeling prevails. No transactions worth mentioning, however, are reported, consumers apparently expecting lower prices, which furnacemen do not show a disposition to concede. Furnaces in the Pittsburgh district are now operating to about 40 to 50 per cent. of capacity, and there is but little accumulation of stock, the present output being required on existing contracts. There is a fair inquiry and demand for steel billets, and some transactions are reported at the existing price of $28. Leading manufacturers of finished products report more inquiry and an increased demand, with mills running 60 to 70 per cent. of capacity, and as stocks throughout the country are light, a good, natural demand is expected as soon as the financial atmosphere is cleared. Coke continues weak, and production and shipments have been decreased in keeping with reduced furnace output. Quotations for pig iron for immediate delivery at the valley furnaces are nominally as follows: Standard Bessemer, $19; chilled basic, $18; gray forge, $17.50, and No. 2 foundry, $18. Standard Connellsville furnace coke is quoted at $1.75 to $2, and foundry coke $3, at the ovens. Lumbermen report very little business at this time, and collections are very slow. Shoe men report trade still keeping fairly well, but not so good as at this time last year, owing to the backwardness of the season. Collections are comparatively good. Hardware business has slackened up to a considerable extent, and collections are becoming rather slow. Groceries keep up pretty well, but collections are a little slow. In wholesale dry goods, business has fallen off some since December 1, and collections are slow. Local financial conditions are reported sound.

BUFFALO. — Owing to the approach of the holidays retail trade has increased materially. Wholesale and jobbing houses report trade about the same as last week, with collections slower in most lines.

BALTIMORE.—Holiday sales are not up to expectations, unseasonable weather being the main cause. Business at wholesale continues very quiet, the exceptions being in toys and fancy goods. Demand from retail sources showed a decided falling off for the first half of the month. Dry-goods jobbers are carrying large stocks. Prices, however, continue firm, and mill deliveries are slow. Collections are only fair. The ending of the shoe season shows the aggregate business about equal to 1906, but recent sales and orders have been of a very reduced volume, and city trade is unusually quiet. Men's furnishings have been fairly active. Maryland leaf-tobacco receipts are light, with small demand. In seed leaf manufacturers are buying only for immediate wants, in anticipation of a better market after January 1. Havana and Sumatra are in fair demand for the better grades. Collections are slow. Turpentine is steady; oils are firm and spirits active, with demand good. High prices continue in butter and eggs. The coal market continues very active, better grades commanding higher prices. Building operations are quiet. Jobbers and wholesalers report an increased number of requests for extensions of time, which are being granted, the contributing cause being the large amount of unmoved cotton in the south and the dull lumber market. These conditions are reflected at banks, where renewals of paper are larger than in former seasons by firms selling largely in the south. While the money market shows a slight strengthening, there is no general improvement noted.

CINCINNATI.—Business is quiet, and trade is largely confined to Christmas shopping, which is moderate. Matured commercial paper continues to be renewed as usual, and generally at minimum rates. Some collateral loans were placed outside of the banks at 8 per cent. There were liberal offerings of exchange at 50 cents discount and few takers. Farmers are marketing very little of their crops. Country collections are poor.

CHICAGO.—Financial conditions are improving here and throughout the west. Savings banks have in many instances resumed paying currency on all savings deposits, while cancellations of notices of withdrawals are being made daily, and over 50 per cent. of the original notices have been withdrawn. Reports from numerous western centers say the banks have resumed currency payments, and out of 600 reports from the west 50 per cent. say they have normal supplies of currency and only await the action of Chicago and New York banks to resume currency payments. Clearing House certificates are being canceled and some Clearing House scrip called in. Banks are almost on a normal basis and are loaning more money. Commercial paper is in better request from interior banks. Insurance companies and investors are buying bonds to a greater extent, but stock and general speculation is not countenanced. Moderate shipments of currency are being made, and some is also arriving from the interior. Holiday trade with wholesalers and retailers has improved, but is below last year's. Staple dry goods are slow and cottons are easy. Clothing and shoes are selling in limited quantities, as this is the slow season. Curtailment by manufacturers continues. Purchases of raw material are light, as manufacturers are using up stocks on hand, as they anticipate replacing them later at lower figures. Stocks of goods, although not heavy, are ample, and cancellations continue. Business in general is below the normal as compared with recent years. Railroads have more idle equipment than for years, owing to the decline in traffic. Mild weather and financial stringency is curtailing the movement and consumption of coal. Pig iron is $1 lower, although inquiry for small lots has improved. Cast-iron pipe is $1 lower, with good sales. Sales of structural material aggregate 14,000 tons. A fair amount of reinstatements as well as cancellations are reported for finished materials, and the feeling is healthier. Wire products are meeting with more request. Lumbermen report a slow trade and easy market. Butter is higher. Prices on fresh meats are unsettled, with pork loins lower. Hogs are higher, but cattle and sheep lower. Receipts of cattle and hogs increased and sheep decreased. Eastern shippers are taking nearly 40 per cent. of the hog receipts.

TERRE HAUTE.—The advice of the leaders of the miners' organizations to refuse checks on pay days has resulted in cash payments on pay rolls. Funds have been raised with little difficulty, though in some few instances operators of mines and factories have been compelled to offer a premium for currency. Coal trade is much easier, and a satisfactory car situation prevails. The slight lull in the work in the coal mines is regarded as being only temporary, and is believed to be due to mild weather and the further fact that users of coal bought heavily during the early part of the season. It is calculated that two weeks of cold weather will again create a demand for fuel. Some manufacturing plants have resumed with increased forces, and conditions indicate that these industries will continue without further interruption. The greater part of the corn crop of this vicinity has been gathered. The yield is far below the average because of excessive rains. Holiday trade promises to be good, and sales at this date compare favorably with those of 1906.

LOUISVILLE.—Business in most lines continues dull, but whiskey and clothing are improving. Retail trade is good and compares favorably with last year at this date. The money situation is brighter, and the bank statement of December 3 shows that all the national banks here have more cash than their legal reserve. Whiskey distillers are still forced to buy currency in the east to pay taxes. Collections continue slow.

ST. LOUIS.—Trade in holiday goods during the past few days has been exceptionally good. Manufacturers and jobbers are now preparing for stock-taking. On the whole, business for the year is much in excess of last year, and the outlook for spring is bright. In financial circles conditions continue to improve. It is the consensus of opinion among the most conservative financiers of St. Louis that with the advent of the new year normal conditions will prevail. Banks are more liberal with cash. Although the demand for loans shows a falling off, the rate of interest remains at 7 to 8 per cent. Lumber seems to have reached its lowest ebb, and there is practically no demand for building materials. Export trade in flour is of good volume, but not up to expectations. The approach of the holiday season, together with seasonable weather, has stimulated retail trade.

KANSAS CITY—General trade conditions show a more rapid improvement. Jobbers in leading lines report the volume of business 75 to 80 per cent. of normal. Country collections are still backward. A number of cancellations have been withdrawn and orders reinstated, and there is a better feeling with jobbers in all lines. Retail trade in holiday goods is active, but colder weather is needed to stimulate business in seasonable merchandise. There is a marked improvement in local financial circles. Bankers are more liberal in cash payments and loans are being more freely granted, with rates at 7 to 8 per cent.

MILWAUKEE.—Jobbing trade is still irregular, but it is gradually increasing with the approach of the holidays. This also applies to retail lines. Collections are slow. The financial situation is more encouraging, due to the satisfactory showing made by the banks.

DAVENPORT. — Trade is very quiet and collections are slow. Manufacturers, selling jobbers, as well as retailers, report that business is slow. Indications point to a greatly reduced Christmas trade.

SIOUX CITY.—Wholesale business in groceries, hardware and provisions appears much better. Local retail stores are doing a fair business. Much colder weather is needed. Collections are

fair, though dragging in some lines. Live stock and grain receipts are better, and prices are higher. Money is easier, and some loans are being accepted from eastern points.

ST. PAUL.—There has been little clearing of the financial situation, although there is an undercurrent of hopefulness. Next year is expected to be a quiet one, and preparations to that end will be made. Current business is only fair. Future business has decreased since November 1, but for the year the volume is still ahead. Collections for December are coming in nicely and show an increase of at least 15 per cent., which is quite a little less than the volume outstanding would warrant. Country merchants are having difficulty in meeting their bills in communities where farmers will not accept certificates of deposit, and banks will not pay currency.

MINNEAPOLIS.—Jobbers in groceries and other staples report a satisfactory volume of business, but in other lines trade is more quiet. Collections are quite satisfactory. Holiday trade is not opening up as well as last year, but an improvement is looked for next week. The weather continues too mild for the free movement of seasonable goods; consequently all retail lines are feeling it. Flour trade continues quiet and will be until after the holidays.

OMAHA.—Jobbing trade in general is quiet, except in groceries and produce. The approach of the holiday season has greatly stimulated retail trade. The financial situation shows improvement, and prospects are brighter. Collections are only fair.

LINCOLN.—Trade is hardly up to normal, and considerable complaint is still heard regarding collections. Cashiers' checks are being gradually retired, and the banks, as a rule, are paying demands in currency.

SIOUX FALLS.—Holiday trade compares favorably with last year's. Wholesale houses are preparing for inventory. Collections are good.

CHARLESTON.—Wholesale trade is fair. Retail trade is good owing to the approaching holidays, and dealers report sales equally as good as last year's. The money situation is somewhat improved.

RICHMOND.—Little change is noted in wholesale dry goods. Preparations are being made for usual inventories. Dealers in heavy and fancy groceries report satisfactory sales. Jobbers of toys and holiday goods continue active, and some have done the largest business in their history. Produce and provisions are in fair demand, but many buyers of staple lines continue conservative in purchases, and this to some extent has rendered business less in volume. Tobacco continues to be marketed in moderate amounts, and prices are well maintained, considering quality and condition. In North Carolina cotton is still being marketed in fair amounts. Retail trade is fair. Collections show improvement, though they continue slow in some lines.

AUGUSTA.—Collections are only fair, but trade shows some improvement.

ATLANTA.—Retail holiday business is not quite up to that of the same period in 1906. Among the manufacturing and jobbing interests there appears to be a feeling of uncertainty as to the future. Collections are necessarily slow on account of prevailing conditions. However, there is apparently a better feeling in financial circles.

MACON.—Christmas trade is still improving. Collections are easier.

JACKSONVILLE.—Tight money shows some relaxation. A slight improvement is noted in collections. Wholesalers are not pushing for business and retail trade is short of expectations.

BIRMINGHAM.—The iron market continues to gradually strengthen in demand, with inquiries growing more brisk each day, though there is not much increase in booked orders. No sales are learned of for less than $15 per ton for No. 2 southern foundry. Some sales are reported at $15.25. Trade in general is assuming a holiday aspect and merchants expect a large trade. Lumber is still quiet. Heavy groceries are not so active. Collections continue to gradually improve, and it is generally believed that the coming year will open with new energy throughout the district.

MOBILE.—Jobbers report a slight increase in trade volume. Collections remain very bad. There is no improvement in the lumber market, and mills continue to shut down.

MONTGOMERY.—Trade in retail lines shows some improvement over last week. Wholesale business has not improved. Collections show a little improvement. Holders display little disposition to sell cotton.

CHATTANOOGA.—Retail trade is lively. Jobbing houses are doing a fair volume of business. Manufacturing remains quiet. Money conditions are easy. Building activities are making gradual headway. Weather conditions are fair. Collections are better.

MEMPHIS.—Jobbers report a fair volume of filling-in orders. Collections are fair. Retail holiday trade is fair.

NASHVILLE.—Trade shows some improvement. Retail dealers are very active owing to the approach of the holiday season, but sales are not altogether as good as anticipated by perhaps 25 per cent. Jobbing houses report their usual orders for immediate shipment at this season, but spring business is smaller in volume. Collections are fairly good with jobbers, and for the past ten days have been increasing daily. Retail collections are good. The statements furnished on December 3 by the national banks of Nashville indicated a very healthy condition. The tenor of these statements has eased the minds of the public in this vicinity on money matters.

LITTLE ROCK.—Very little wholesale business is being done, but holiday retail trade is good. Collections are fair.

NEW ORLEANS.—Local banks are relaxing and depositors are enabled to draw money for holiday shopping. Retail stores are beginning to do a better volume of business. Grocery and provision jobbers are rather active and report fair collections, but other lines are dull. Excessive rain has interfered with all crops, reducing the yield of cotton, rice and sugar cane. The majority of the lumber mills have shut down, and there is little domestic demand for their product and only a fair inquiry from abroad.

DALLAS.—In jobbing lines there is no material change in trade conditions. Weather conditions are not favorable, and retailers are forcing trade by reduction sales. Collections are quiet. Cotton is moving slowly, and the larger per cent. of the crop is still in the hands of the farmers.

WACO.—Merchants are buying only for their needs. Collections continue slow. Very little cotton is being sold. Conditions in general show some improvement.

SAN FRANCISCO.—Retailers report a fair holiday business. Bank reports show substantial reserves. Collections continue slow.

SEATTLE.—Holiday trade is quite satisfactory, although not so heavy as last year. Wholesalers report future orders light. The banking situation is somewhat relieved. Collections are slightly better.

SPOKANE.—Real estate continues to move at good prices. Wholesalers report increasing orders, and collections are improving. Wheat is moving. Farmers, however, are selling but little wheat at present prices.

TACOMA.—Trade continues to show satisfactory improvement in most lines, although not much activity is noted in building operations. The lumber industry is quiet, with comparatively few inquiries. Collections are a little more free.

PORTLAND, ORE.—Holiday trade is good and a surprise to a certain extent. Jobbers report a large decrease in orders, while manufacturers, especially of lumber, are producing materially less product. Exports of grain are heavy.

TORONTO.—The worst feature of trade here is the lack of employment for unskilled labor. This is all the more serious on account of the large number of immigrants which have arrived here during the past few months. The scarcity of money has curtailed activity in many lines in which these men could be employed, and unless the situation improves more than it has done, there is likely to be little work offering for these men until after the winter. The money situation, however, shows continued improvement, and business has taken on a correspondingly brighter tone. Values of Canadian securities also show improvement, following the easier money conditions. The dry-goods trade reports an excellent season for holiday goods. Trade settlements are being well met. New goods for spring and summer are meeting with an excellent business. For spring, broadcloths, plain and fancy worsteds and silky stuffs are moving briskly. The sorting trade for fall and winter tweeds is heavy. Values are generally steady. The business in men's ready-made clothing is not so good, manufacturers finding demand a little slow. The grocery trade is active. Sugar prices have an easy tone. Dried fruits are firm. The scarcity in canned vegetables keeps the market high. The hardware movement is good, although building material is rather slow in movement. A fair number of building permits are being issued, although they do not show up to those of last year. Country trade is brisk, having been much helped by sleighing. The final report on Ontario crops shows the total yield well up to the average, although behind that of last year. The general quality of grain is good and well up to weight.

MONTREAL.—The tone of business grows more cheerful. The main reason for this is the fact that money is working easier. The approach of the holiday season has imparted great activity to retail trade, and wholesale business has profited accordingly. In most lines of trade there are now few complaints regarding collections; they are coming forward as well as is usual at this time of the year, and it is hoped that at the end of the holiday season there will be still further improvement in this connection. Money is still sufficiently scarce to affect trade, and retrenchments are being made in certain lines of industrial activity. This, as in other cities of Canada, is throwing men out of work. The dry-goods trade continues brisk. The disturbed condition of affairs in the United States has had some effect here, but there has been nothing to indicate that the consumption of goods has fallen off on this side the line. The buying for spring is good, particularly for better-class lines. Values are generally steady, there being little or no sign of price declines. The volume of the grocery trade moving is good. Heavy demands for holiday goods are met, and there is now a brisk reorder trade. Sugar is easier at the recent decline. Evaporated apples are lower. A fairly good business is being done in general hardware. Colder weather and sleighing has greatly helped country trade. Butter prices continue high on good demand. The export season for cheese is now closed. Total shipments this year have been much behind those of a year ago. Hides are still easy. On the present movement prices have declined some 50 per cent. The trade does not seem to quite understand the position of the market. If quotations hold at the present level, some activity is expected.

VANCOUVER-VICTORIA.—Wholesale and retail business is brisk and payments are satisfactory. The number of unemployed is large. When this province needed labor a month or two ago there was not nearly enough available, and now that general industrial activity has fallen off, the number of men pouring in here is larger than ever before. There is quietness in both lumbering and mining. Export trade continues brisk in other lines.

WINNIPEG.—While their is a fair tone to business, the scarcity of money is having a considerable effect upon general trade. The movement of retail stocks has been helped by cold weather, and wholesalers report a better demand for goods. The fact that the fall has been an open one has been a great boon to the farmers, who have been busy making preparations for next season's crops. It is expected the acreage of seeded land will then show considerable increase. Holiday trade has been good throughout the country and collections are improving. The heavy immigration this year has done much to help trade.

FINANCIAL.

The Week's Financial History.

The synopsis here inserted of events of the week having a direct bearing on the financial situation is continued as forming a convenient chronological record which may be found of interest in the future:

December 7.—Stock prices rise early, then break on heavy selling. Call money, 9 per cent Whitney, Stephenson & Co., a Pittsburgh brokerage house, suspends. Federal troops reach Goldfield, Nev. Stronger bank statement. Loans decrease $11,682,000; cash increases $4,671,000. Deficit decreases $6,779,075, making deficit $46,210,350.

December 9.—Stock market weak as a whole. Money on call, 8@20 per cent.; prevailing rate, 8 per cent. Time, dull. Currency premium, 1 per cent. Gold engaged, $3,000,000. London reported buying our bonds. London Underground interest coupons for December paid. Balance of Amalgamated mines in Montana reported closed. Financial crisis reported in Chile and some large failures in Hamburg. Portland (Ore.) banks report reserves of 44 per cent., or three times legal requirements.

December 10.—Stock market lower and bonds easier. Call money, 12@25 per cent.; prevailing rate, 18 per cent. Currency premium below 1 per cent. again; ruling rate, ¾ per cent. Money easier at London. Cotton prices break 50 points on government estimate of 11,678,000 bales. Wheat weaker. Receivers appointed for Electric Vehicle Company. Country banks reported lending money on time in Chicago. Proposal to liquidate Mercantile National Bank (New York).

December 11.—Stocks decline sharply till midday, then recover all early loss. American Sugar very weak. Call money, 22@2 per cent.; prevailing rate, 20 per cent. Small business in time loans and discounts. Currency premium, 1 per cent. Western Union pays its dividend in treasury stock. Commodity prices unsettled. Cotton irregular, closing 12@14 points higher on manipulation. Wheat irregular without much change. Corn higher on poor husking returns. Claim against Knickerbocker Trust Company for money on deposit sells at 60 cents on dollar at auction. More indictments in Brooklyn bank scandals. New $20 gold pieces sell at $25@30 for sharp-edged coins. Work resumed on Lane cut-off Union Pacific Railway. Federal inquiry into Goldfield strike.

December 12.—Stocks rise early, 1@2 points in some cases, credited to President's announcement, but later declined quickly and dulled, closing heavy. Currency premium strong at 1 per cent., credited to interior banks bidding for money preparatory to state reports as to condition. Money on call, 3@12; prevailing rate, 8 per cent. Time, scarce. Limited business in mercantile paper. Gold engaged in London, $2,000,000. Bank of England gained $7,000,000 and reduced loans $7,000,000. Reserve increased to 46⅞ per cent., as against 47 a year ago. London a moderate buyer of stocks here early. Atlantic Coast Line regular 3 per cent. dividend declared in 4 per cent. certificates of indebtedness. November pig-iron output, 1,828,125 tons, against 2,336,972 tons in October, and 2,187,665 tons in November, 1906. Cotton rises 30 points on covering. Wheat irregular. Corn higher on poor husking returns.

December 13.—Stock market dull and lower on expectations of poor bank statement. American Sugar very weak. Money, 6@10 per cent.; prevailing rate, 8 per cent. Time, inactive. Currency premium, ¼@1 per cent. Rumors of dividend suspensions or reductions. Gold engagements, $500,000; total for week, $3,250,000; total on movement, $103,000,000. Sir W. C. Van Horne negatives story of Canadian Pacific purchasing Boston & Maine control. Cotton breaks late. Wheat exports close to record for year. Early weekly reports of gross earnings for December show losses from year ago. New York City Board of Estimate modifies its former sweeping retrenchment resolution. Union Pacific and Southern Pacific make disappointing October returns.

Money Market.

The feature of the loan market at New York this week was a rather sharp advance in quotations for call money, which rose to as high as 25 per cent. on Tuesday, with renewals at 18 per cent., compared with 7 per cent. on Monday. Preparations for the January disbursements, it is held, have begun earlier than usual, as is natural under the circumstances, while it is also intimated that the state banking department is to issue a call for the condition of the state banks of New York, thereby giving occasion for a certain amount of "window-dressing." It is furthermore argued in some quarters that banking authorities desire to repress any further growth of activity in the stock market at this juncture, and may also deem that the maintenance of high money rates at New York is calculated to draw some of the funds which have been accumulated in interior institutions, and which are the basis for the high figures of reserves which have been shown in the statements made to the Comptroller of the Currency of the condition of national banks on December 3. As the week advanced the renewal rate eased off slightly, but remained at around 10@8 per cent. Time money has been inactive, with only a limited inquiry for thirty to sixty day arrangements, the quotations for which were 12@10 per cent., while six months' money in small amounts was offered at 8 per cent., but found few takers. Commercial paper is still exceedingly quiet, the nominal quotations being 10@8 per cent. The currency premium ranged between ¼@1¼ per cent., most of the transactions being at 1 per cent.

The gold engagements this week were on a more limited scale, however, aggregating about $3,250,000, and raising the total amount secured abroad to $103,250,000.

New York Banks.

Last Saturday's bank statement was favorably regarded, showing as it did a further reduction of $11,682,900 in the average loans and an increase of $4,671,100 in cash. The change in loans was, in fact, considered the most favorable development in the New York banking situation since the beginning of the financial crisis. This reduction, in view of the greater activity of the stock market, was ascribed to the payment of obligations in other quarters, probably those of interior institutions. The cash increase seemed to agree very well with the known movement of money for the week. The decrease of $8,431,900 in deposits was, however, about $1,500,000 greater than was called for by the other changes, and resulted in a proportionately larger reduction of the deficit in reserves, which decreased $6,779,075. The figures of the statement compare as follows with those of the preceding week:

	Dec. 7	Nov. 30	Changes
Loans	$1,186,395,600	$1,198,078,500	D. $11,682,900
Specie	173,888,700	170,554,600	I. 3,334,100

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending December 12 shows an aggregate of $2,271,282,000, as against $2,471,883,000 last week and $3,323,225,000 in the corresponding week last year. Canadian clearings for the week aggregate $89,374,000, as against $89,707,000 last week and $91,272,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	December 12	Inc.	Dec.	December 5
New York	$1,319,733,000	....	38.9	$1,454,726,000
Chicago	191,385,000	....	14.4	204,940,000

New York Securities Market.

While a rather firm tone was communicated to the stock market early last Saturday by the expectation of a good bank statement, which was in a reasonable degree fulfilled by the actual figures, the following Monday witnessed the development of reactionary tendencies throughout the list, which have gone further since. The principal influence in this connection was the renewed firmness of money, the call-loan rate running up to 25 per cent., while renewals from Tuesday on were at 18 per cent. or upward. It is argued that preparations for the January disbursements necessarily begin earlier this year than under normal conditions, and that banks are desirous both of checking any growth of speculation and at the same time furnishing an attraction in the form of high rates which will draw hoarded funds from the interior banks. The premium on currency has also failed to disappear, and gold shipments from Europe to New York, though on a smaller scale, have continued. Under the circumstances the street exhibited a reassertion of pessimism, and there were, furthermore, certain developments in connection with different companies which also tended to encourage bearish sentiment and activity. One of the notable features was the extreme heaviness of the Gould stocks, both Western Union and Missouri Pacific breaking to the lowest figures they have seen in a long time, the occasion for which was furnished by the uncertainty about the Western Union quarterly dividend. When it was announced on Wednesday, however, that the regular 1¼ per cent. had been decided on, though it is to be payable in stock, Western Union had a feeble rally. At the same time there was evidence of considerable selling by tired-out or apprehensive speculators in all of the leading stocks, such activity being conspicuous in issues like Northern Pacific, Great Northern, Union Pacific, Pennsylvania, New York Central and, above all, Reading. The same held good as regards the industrials, both Amalgamated Copper and American Smelting being very heavy, while Sugar was a feature, breaking to below 95, in spite of the absence of any tangible bad news, apart from the recent decease of the company's president, Mr. H. O. Havemeyer. On Thursday the proceedings were momentarily diversified by a sharp rally at the opening, based upon the positive statement that the President would not accept the renomination, though the inutility of this as a factor in the market was quickly demonstrated by the resumption of selling and the re-assertion of the bearish tone. The rumors that the Canadian Pacific is a possible purchaser of the New Haven's holdings of Boston & Maine stock had a slight bullish influence upon the shares of the first-named company. In advance of action on the dividend upon Atlantic Coast Line, that issue developed a little strength on Thursday, but promptly declined again when it was announced that the payment of the regular 3 per cent. would be made in scrip. The bond market has reverted to a condition of lethargy, and slight recessions have been general throughout the active part of that class of securities.

Foreign Exchange.

More normal conditions were seen in the exchange market this week. At the outset there was a slightly firmer tone on the absence of any large supply of bills, but in this respect the situation improved somewhat, the offerings of drawings of that kind being slightly better. At the same time selling of stocks for London account created more or less inquiry and resulted in irregularity in the demand sterling quotation, though the fluctuations were within narrow limits. The inquiry for exchange in connection with gold-importing arrangements was less pressing, but the continuance of a premium of about 1 per cent. for currency at New York enabled bankers to engage about $3,250,000 more gold in London, and brought the total since the beginning of the movement up to $103,000,000.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.60@4.86.75; commercial bills, 4.79½@4.80½; francs, 5.23¾ less 1-16@5.19⅝ less 1-32; reichsmarks, 93¼@94½ less 1-32.

No change was made in the Bank of England's discount rate, which remained at 7 per cent. Its weekly statement published on Thursday was a favorable one, showing a gain of £1,494,898 in specie, and an increase in the proportion of reserve to liability from 44.92 per cent. to 46.95 per cent. There was also a decrease of £1,240,000 in the loans. In the London open market call money is 3¼@4 per cent. and discount 6@6½ per cent. The Bank of France this week reported a loss of 3,975,000 francs in gold. Its discount rate is still 4 per cent., while the Paris market rate is 4 3-16 per cent. At Berlin the bank rate remains at 7½ per cent., while the market quotation for discounts there is 7⅛ per cent.

In view of present conditions it is interesting to point out the large increase in steel-rail exports in October and the ten months. In October, for instance, the exports increased over $500,000. The exports for October in detail appear as follows:

Exported to—	1907	1906
Europe	....	$320
British North America	$225,884	10,544
Central America and British Honduras	7,537	2,570
Mexico	38,811	48,254
West Indies and Bermuda	149,039	30,693
South America	82,423	226,790
Japan	268,877	211,810
Other Asia and Oceania	358,529	101,060
All other Africa	2,322	....
Total	1,133,362	632,041

The exports for ten months compare as follows:

	1907	1906
Europe	$1,778	$11,681
British North America	915,860	1,832,399
Central America and British Honduras	585,166	491,938
Mexico	919,371	607,166
West Indies and Bermuda	780,446	765,876
South America	2,148,203	2,441,876
Japan	850,901	606,889
Other Asia and Oceania	2,550,683	514,957
British Africa	7,741	514,957
All other Africa	23,004	7,628
Total	8,783,153	7,290,259

Exports of domestic breadstuffs, meat and dairy products, food animals, cotton and mineral oil from the United States in November amounted to $122,772,997, a gain of $17,829,195, or 17 per cent. over 1906. The following table presents an outline of the statement:

	Month of November, 1906	1907
Breadstuffs—		
Corn, bushels	4,796,900	4,070,096
Corn, value	$2,513,234	$2,726,999

Argentina	646,000	374,000	2,295,000
Russia	153,000	408,000	229,000
Danubian	1,462,000	680,000	1,071,000
Total	3,448,000	2,172,000	4,704,000

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	Dec. 6, 1907	Nov. 29, 1907	Dec. 7, 1906
American	3,171,279	3,014,894	3,693,128
Other kinds	851,876	800,876	910,000
Total	4,023,155	3,815,770	4,603,128

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Dec. 6, 1907	Nov. 29, 1907	Dec. 7, 1906
Great Britain and continent	2,233,000	2,092,000	2,199,000
Egypt	195,000	185,000	195,000
India	310,000	289,000	370,000
United States	1,285,000	1,250,000	1,839,000
Total	4,023,000	3,816,000	4,603,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	Last week	Last year
Week	472,959	484,512	576,484
Season	5,257,267	4,784,308	6,850,357

Wool Markets.

Sales during the past week were larger than for several months, several large blocks having been moved. Two or three houses are said to have sold at least 500,000 pounds each. Manufacturers are requesting prompt shipment, showing that their stocks are very small and that the financial situation has cleared up. An encouraging feature is that the sales had a wide range of grade in both worsted and clothing wools at firm prices, wherever the grades wanted were available. Territory wools constituted the bulk of the sales, as they are in better supply, Idaho, Utah, Montana and Wyoming moving, mostly the latter, making a good reduction in the stocks. It is now probable that the year will end with stocks smaller than last year, and perhaps as small as two years ago, particularly of fleeces. The fleeces have been cleaned up in the west, the remainder being in Boston, and the bulk of these quarter bloods, for which there is a much better demand, though they will not be urgently needed until the heavy-weight goods season is fully open after the first of the year. The London sales closed Tuesday, with fine merinos suitable for this country about 5 per cent. below the opening, and faulty wools 10@15 per cent. off. However, only 2,000 bales of the 113,000 bales sold were for this country, so that the effect of the lower prices has been discounted by the removal of the domestic wools from competition with the corresponding foreign grades. Some of the low crossbreds from the London sale are now offering in Boston at about 53@55 cents for Queensland 46s and 68@70 cents for 50s, with good 40s at 45@48 cents. The purchases by Americans this year in Australia were only 20,000 bales, against 100,000 bales last year, and in South America only 1,000 bales were taken for this country.

Boston Shoe and Leather Market.

There has been some improvement in the demand for leather, but sales are behind those for this immediate period a year ago. Shoe manufacturers are following very closely the plan of buying for their wants from week to week. Kid and sheep leathers are quiet, though colors, particularly the new browns, are going quite satisfactorily. Prices are holding up well, though some concessions have been reported in the cheaper grade of leather. Hides appear to have reached a point where tanners will buy if they can borrow money to good advantage. Ohio buffs are selling at 7 cents for No. 1s. Extremes have sold at 8⅛ to 8¼ cents. New England butchers are holding hides, not caring to sell at 5 cents. Shoe manufacturers report buying of footwear irregular and in the aggregate considerably behind a year ago. Better things are expected after the opening of next year, but wishes, rather than tangible evidences, are the only apparent foundation for such expressions. Both the wholesale and retail trade expect, in the near future, a recession in the prices of leather and other materials entering into the construction of the shoe, and until the new prices are established on a stable basis buying will be confined to goods that are to go immediately to the wearer, or practically so. Stocks will be held very low, to save any possible shrinkages. Shipments this week are at a low point. The *Shoe and Leather Reporter's* statistics follow: Last week, 67,338 cases; preceding week, 71,826; last year, 90,800; total for 1907, 4,444,378; total for 1906, 4,745,275; decrease, 300,897.

COMPARATIVE PRICES OF 107 COMMODITIES.

Quotations ruling for standard grades at the low point in 1896, the succeeding high point in 1900, the succeeding low point in 1901, and the generally high records reached since then:

SATURDAY, DECEMBER 21, 1907.

In one of his essays at once brilliant and weighty—that on Bacon—Macaulay points a contrast between the ancient and the modern philosophers. He quotes the depreciatory words of Seneca about those who had made transparent windows and tubes for diffusing warmth equally through all the parts of a building and those who had invented shorthand, declaring that these things were unworthy of philosophers. A striking illustration of the differing attitude of the moderns is furnished in the career of the great physicist who has just passed away after a lifetime of service, not alone in the domain of pure science, but in the application of principles discovered there to the practical betterment of agencies of progress in the world about him. Lord Kelvin's fame as an original investigator is not more secure than is the world-wide recognition of his helpful inventiveness, particularly in the field of electrical transmission and in the domain of navigation, where his improvement on the construction of the mariner's compass has been particularly noteworthy and serviceable.

Currency discussion was the feature of the first day's session of the National Civic Federation at its annual meeting at New York this week. Many notable men participated in the discussion, among them Mr. Andrew Carnegie, Mr. James Speyer and Mr. Victor Morawetz, and the president of the association, Mr. August Belmont, sent a letter upon the subject. There seemed to be a general agreement in favor of some method of securing greater elasticity in the currency. The idea of a central bank was touched upon by some of the speakers, two of whom, Mr. Carnegie and Mr. Morawetz, declared it unnecessary, and the latter impracticable. Mr. Morawetz favored the formation by the national banks of a body in the nature of a large clearing house association, by means of which each member would be enabled to issue notes upon the joint credit of the associated banks, the government being given power to control the issues by increases of the reserves to be held against notes or of the note redemption fund. The Federation, after some consideration of it by a committee, passed a resolution declaring that Congress should pass as speedily as possible, consistently with security and safety, some measure which will impart greater elasticity to the currency. The resolution did not, however, commit the Federation to any specific plan of reform. Arbitration and conciliation considered as means of preventing strikes and lockouts were the principal matters discussed on the second day, at the close of which Mr. Seth Low was chosen president of the Federation in place of Mr. Belmont.

Monday witnessed the setting forth of the flower of the United States Navy upon a notable expedition, which has been long in contemplation. On that day sixteen battleships with four auxiliaries started from Hampton Roads on a voyage which will carry them over 14,000 miles of sea before they touch on the Pacific coast of the United States. The trip will furnish a practical test of skill in naval administration and mobilization which will not be without its advantages, and it seems safe to say that it will be productive of some lessons which a nation with so large a seacoast as the United States will find its profit in learning. The ships will be accompanied on their long voyage by the good wishes of the nation, and there is no reason to doubt their hospitable reception wherever they may chance to cast anchor before their return.

So far as the conclusion of formal agreements is concerned, the Central American Peace Conference must be regarded as a success. It finished its work at the close of last week except as regards the signing of the documents agreed to. Of the results of the conference perhaps the most notable is the making a neutral ground of the territory of Honduras, which is the central state of the five composing Central America. The four other states pledge themselves to preserve the absolute neutrality of Honduras, which seems to afford a geographical obstacle to the making of war. Among the special conventions adopted by the conference, the one providing for a permanent peace court will perhaps attract the most attention. To this court will be submitted all questions which may threaten the peace of the countries. An extradition treaty, the lack of which has been at the bottom of many of the disputes between the countries in the past, is provided by another of the conventions. A third treaty establishes a Central American pedagogical institution and a university system.

A fourth treaty provides for the establishment of an international bureau in Central America similar to the Bureau of American Republics at Washington. A fifth treaty dealing with fiscal matters, such as customs duties and tariff schedules, is expected to result in the abolition of unnecessary charges on the transportation of articles from one country to another. The provision of better means of communication between the countries is the chief matter with which the sixth treaty is concerned. One of the purposes to be subserved by it is the building of a Central American railroad under the supervision of a commission composed of representatives from each of the signatory states. Provision will also be made under this document for the granting of telegraph and telephone concessions by the consent of the five republics, and of the management of the concessions by a joint commission. Looking back upon the work of the conference, one cannot resist the conclusion that it has done quietly, and it is to be hoped, effectively, a very difficult piece of work within a very reasonable limit of time.

The reorganization of the Knickerbocker Trust Company of New York, desirable from every standpoint, has been delayed by the multiplicity of committees and of plans which have been brought forward. It is now, however, beginning to be felt that there is likely to be a substantial basis for agreement by all parties in regard to the plan put forward by the so-called Parsons or Satterlee committee, one of the four committees that has been formed in this connection. Under this the stock of the company is to be placed in a voting trust composed of Messrs. Henry C. Frick, Myron T. Herrick and Lewis C. Ledyard. The stockholders are to furnish in cash $2,400,000, thus enabling the company to resume business immediately. The non-preferred depositors are to accept for 70 per cent. of their deposits certificates on which they can withdraw at stated intervals certain percentages within two years and four months from the date of resumption, and to accept for the remaining 30 per cent. surplus certificates "A," bearing 4 per cent. interest and retirable from the accumulated profits of the organization. The cash contributed by the stockholders is to be represented by surplus certificates "B" for the same amount, and it is also provided that these certificates can under certain conditions be converted into stock at 200 for the latter. While it cannot be concluded that the complications surrounding the company are all solved, the developments in the above connection have a favorable aspect, and the plan seems to be both feasible and fair to all concerned, whether they be the stockholders, directors or depositors. It might be well to add that a fourth party, the general public, is also interested in the rehabilitation of this large concern, the suspension of which brought so many evils in its train, and any plan that seems, as this does, to meet the views of a multiplicity of persons interested might well be put quickly into operation, to the end that a permanent receivership, with all that this involves, may be avoided.

The world's stock of money, according to the latest and most reliable data obtained by the Director of the Mint, amounted at the close of the year 1906, according to the Comptroller of the Currency, to $14,280,100,000. Of this total gold was not far from one-half in amount, being estimated at $6,891,800,000. Silver money, full and limited tender, amounted to $3,256,300,000, while uncovered paper was estimated at $4,132,000,000. It is of interest to note that 82 per cent. of the gold—that is, $5,588,900,000—was held by the following eight countries in the order named: United States, $1,593,300,000; Germany, $1,030,300,000; Russia, $939,400,000; France, $926,400,000; United Kingdom, $486,700,000; Austria-Hungary, $306,400,000; Italy, $215,500,000, and Spain, $90,900,000. The same countries held 56 per cent. of the stock of silver, the United States leading with $698,700,000. Forty per cent. of the stock of uncovered paper was also held by the countries named, the United States again coming first with $610,000,000. Outside of the countries mentioned India had the largest stock of gold, viz, $337,300,000.

France had the largest per capita amount of gold, namely, $23.57, and of all money, $40.88. The United States came second with $18.66 of gold per capita and $33.99 of all money, Germany being third with $17 of gold per capita and $25.03 of all money. The banking power of the United States as represented by capital, surplus and other profits, deposits and circulation of national and other reporting banks, together with the estimated amount of funds of this character in the non-reporting banks, amounted to $17,824,847,682, while the combined banking power of the world, adding the increases since 1890 to Mulhall's estimate of that date, amounted to $44,859,000,000. The increase in the banking power of the United States in the interval has been 246.1 per cent., while that of foreign countries has been 149.5 per cent. It will be seen by comparing the totals that the United States is credited on the basis of these estimates with almost two-fifths of the banking power of the world.

THE REPORT OF THE NEW YORK BANK COMMITTEE.

Within little more than a month after its appointment the committee of bankers selected by Governor Hughes to recommend modifications in the existing banking laws of the state has submitted its report. This document forms a valuable contribution to the discussion of banking and currency questions which is now under way and bids fair to continue for some time to come. The report has an interest and value which is not confined by state lines, though its suggestions are applied only to state legislation. The committee has recognized from the outset that New York is the Empire State and that New York City is the financial and commercial center of the continent. Thinking and speaking in the light of this recognition, the committee will have for its report an audience far wider than could be expected for conclusions looking to matters of merely state or locality concern.

A considerable part of the report is devoted to the subject of the maintenance of reserves. The combined status of all the banks in the metropolis, the committee says, constitutes in the eyes of the public the ultimate reserve strength of the nation, and this is necessarily weakened if a certain number of them are permitted to hold less cash reserves than the others do, and the burden is unequally borne. The Clearing House Association (fifty-two members) endeavors to maintain the aggregate at or above the 25 per cent. ratio. Most of the state bank members thereof voluntarily observe this, and it is suggested that there is no sound reason why all should not be required to do so, especially in view of the fact that many of them are establishing branches not permitted to national banks, a circumstance which emphasizes the need for full reserves.

It is conceded in the report that some distinction should be made between banks of discount and trust companies in the matter of reserve requirements. The latter are required to invest their capital in bonds of the United States or of the state of New York, or of municipalities of the state, or, it may be, in mortgages, and they must also deposit not less than 10 per cent. of their capital with the banking department in bonds. These provisions as to capital investments have been regarded as in the nature of reserve, and the public have therein a measure of protection. The majority of the committee recommend that a reserve of 25 per cent. should be maintained by the trust companies in the Borough of Manhattan, of which 15 per cent. should be cash on hand and 10 per cent. cash in some bank or trust company approved by the Superintendent of Banks. This suggestion is made on the ground that, in so far as they do a banking business, the trust companies should have the same responsibilities as the discount banks. It may be noted in passing that Mr. Frissell regards the proposed reserve of 15 per cent. cash for trust companies as too low, while Messrs. Sheldon and Marston, trust-company presidents, suggest that in cities of upward of 800,000 inhabitants a lawful money reserve for trust companies of 15 per cent. upon all deposits payable on demand, in addition to the reserve supplied by their capital investment and the 10 per cent. guaranty fund, would be adequate.

Some attention is given in the report to the propositions that banks and trust companies be prohibited by law from joining syndicates or loaning upon syndicate enterprises and underwriting agreements. The ground is taken that while it would be well to forbid those institutions from becoming members of syndicates of the ordinary promotion class, a positive prohibition against all syndicates and underwritings would prove detrimental to legitimate enterprises. The committee recommends the incorporation in the banking law of a provision to the effect that no bank or trust company shall make any loan or advance to an amount in excess of 20 per cent. of the capital, surplus and undivided profits of the bank or trust company making such loan the repayment of which is undertaken severally by two or more individuals, corporations or other parties. This would prevent any institution from loaning more than 20 per cent. of its capital, surplus and profits in the aggregate upon any underwritten securities or syndicate operation. With this is coupled the recommendation that no bank or trust company be permitted to make any loan or advance where such bank or trust company is liable, directly, indirectly or contingently, for the repayment of such loan or advance in whole or in part. It is, however, suggested that the obligations of the United States, of the state of New York and of the cities of the state be excepted from these provisions.

The committee recommends that the State Superintendent of Banks be given a veto power on the establishment of a bank or trust company, or a branch of any existing bank or trust company, or the purchase of the control of one banking institution by another. In the view of the committee it should be within his province to prevent the organization of such institutions by improper men, or their establishment in localities where business conditions do not reasonably insure their success. So the committee thinks that banks in New York City should not hereafter be permitted to have branches unless they possess a capital of $500,000, and that both banks and trust companies should be required to furnish an additional $100,000 capital for each branch opened. An important suggestion, which, if adopted, would greatly reduce the expense of bank receiverships, is that the Superintendent of Banks should by law be made the receiver of all failed corporations subject to his jurisdiction, or that receivers should be appointed by him precisely as receivers of national banks are appointed by the Comptroller of the Currency. Attention is directed to the extent to which other institutions are doing a savings-bank business, a practice which the committee believes to be open to criticism, but which it leaves to be dealt with by the Superintendent of Banks in his report. The committee finds the body of the banking laws in a confusing and unsatisfactory form, and suggests that they be rearranged, revised and codified. The members of the committee have done a very careful piece of work for which they deserve the thanks of the community. They have done it with great promptness, and, it may be added, without any other reward than the compliment implied in their selection.

COMPTROLLER RIDGELY FOR A CENTRAL BANK.

The most striking feature of the report of the Comptroller of the Currency this year is the advocacy made by him of the establishment of a central bank of issue. This is, he says, the system which has been adopted and found to work most satisfactorily in the commercial countries of Europe, and is the one that gives the surest promise of satisfactory operation in this country. The chief weakness of our present national banking system is, the Comptroller says, the provision in regard to reserve deposits, which piles reserve on reserve, in reserve cities and central reserve cities, without requiring a sufficient amount of actual cash reserve on hand. When a real emergency arises, the Comptroller says, these reserves are not real reserves at all, because they may in a day become unavailable. The bond-secured bank notes offer no help to a bank in any sudden call for deposits. From their very nature they are fixed currency, issued on the secured currency principle, as distinguished from the currency or banking principle.

The Comptroller of the Currency takes the view that the installation of a proper central bank would not only be a great benefit to all the business of the country and a great protection to the people, but would solve the problem of the relations of the Treasury Department to the business of the country. It would, he urges, give not only a reliable and efficient system in handling our government finances, but would add stability and safety to our banking system. Regarding the organization and control of such a bank, the Comptroller suggests that an essential feature of it would be that it must be under government control, so that it could never be monopolized or used by any man or set of men. It should be kept out of politics, and the men chosen for its managers and directors should be men of the highest character and ability, whose duties and interest would be for the undivided advantage and interest of the bank. In the Comptroller's view it would not be difficult to accomplish this end by having the control divided between certain directors elected by the shareholders and a certain number chosen by the government.

In the opinion of the Comptroller such a bank as that proposed should not be allowed to do a general or commercial business, but should be confined to the transaction of the government business, the issue of credit notes, receiving reserve deposits from other banks, the discount of their paper on approved security, or rediscounting notes of their customers for other banks. Such a bank should also have the right to deal in United States government bonds, and probably the bonds of states and of municipalities, but not in stocks, and should have such authority for dealing in foreign exchange as would enable it to accumulate gold credits abroad and import gold and bullion when needed for its reserves. The main office of the central bank should be, the Comptroller suggests, in the city of Washington, and such branches should be established in the reserve cities and sub-Treasury cities as are found necessary. In the view of the Comptroller a national central bank organized in this way, with its profits limited and its ownership widely distributed, mainly among the banks who were to be its customers, which would not be permitted to do a commercial business, but be limited to the transaction of business with the government and with other banks, would not be open to the objection urged against the former United States banks, that they were really private institutions engaged in a general banking business. Such a bank, the Comptroller says, would greatly improve the efficiency and value of the Treasury Department and make it a means of assistance and benefit to business instead of a menace and a danger. The suggestion of a central bank coming in an official report from the Comptroller of the Currency presents it as a basis of discussion in which it has not come before the country hitherto.

ANOTHER DECREASE IN RAILWAY NET EARNINGS.

It is an admitted fact that the railways are now handling a smaller volume of tonnage than for the past few years and on that account less noteworthy gains, if not actual decreases in gross earnings are to be looked for. For months past coming events have been casting their shadows before, and therefore the new order of things as regards railway earnings can hardly occasion surprise, but the investor is apt to be prone to scrutinize more closely the influence of lighter gross receipts on net revenue and to observe the trend of operating expenses as well. High operating costs, a natural corollary of excessive prosperity, have made it well-nigh impossible for traffic officials to conduct business on an economical basis, but now that a spell of depression has set in, there are many who look for comparatively favorable net earnings, despite the fall in gross receipts. Whether these wishes shall be gratified only time can tell, but it is noteworthy that the latest conclusive returns as to gross and net earnings, those for October, show that the ratio of increase in operating expenses was not so heavy as it was in September, the gains being 18.7 per cent. and 20.5 per cent. respectively. Gross earnings of all roads thus far reporting for October aggregate $150,472,163, the gain over the like month in 1906 being $12,342,565, or 8.8 per cent. The extent of this increase can be appreciated when it is stated that gross earnings for October, 1906, advanced 11.3 per cent. over those of the like month in 1905. Net earnings for October of this year amounted to $46,747,736, the decrease from that month in 1906 being 8 per cent., or $4,065,532. In October, 1906, net earnings displayed an increase of 9.7 per cent. over the figures reported in the same month of 1905. This table summarizes results for October, 1907 and 1906:

	1907	1906	*Inc.*
Gross earnings	$150,472,163	$138,129,598	8.8
Operating expenses	105,724,427	87,316,330	18.7
Net earnings	46,747,736	50,813,330	*8.0

* Decrease.

Divided into group form, the gross earnings make this showing for October:

	1907	1906	*Inc., p. ct.*
Northwestern	$10,203,307	$9,560,442	6.7
Central western	12,521,041	11,731,955	6.7
Trunk lines	35,216,559	32,501,371	8.3
Eastern	3,500,199	3,101,958	13.1
Coal roads	14,550,420	12,916,673	12.6
Southern	24,794,699	22,052,604	12.3
Southwestern	21,841,054	20,705,870	5.4
Pacific	27,785,493	25,488,725	9.0
Total	150,472,163	138,129,598	8.8

It will be seen that increases are the rule, ranging from very good to very moderate. Thus three groups—the eastern, hard-coal carriers and the southern roads—each show gains in excess of 12 per cent. The Pacific roads report an increase of 9 per cent., while the trunk lines contribute one of 8.3 per cent., and the central western roads display an advance of 6.7 per cent., a similar increase being shown by the northwestern lines. The southwestern roads furnish an increment of 5 per cent.

Adopting the group form for the net earnings we get this exhibit for October:

	1907	1906	Dec., per ct.
Northwestern	$3,296,980	$3,681,349	10.4
Central western	3,453,879	3,640,610	5.1
Trunk lines	9,577,378	10,938,445	12.4
Eastern	1,285,565	1,235,653	*4.0
Coal roads	5,706,866	5,155,846	*10.6
Southern	7,456,612	6,705,794	*11.2
Southwestern	6,718,683	8,319,515	19.2
Pacific	9,251,773	11,136,006	16.9
Total	46,747,736	50,813,330	8.0

* Increase.

Three groups report increases—the hard-coal carriers 10.6 per cent., the southern roads 11.2 per cent. and the eastern lines 4 per cent. On the other hand, five divisions show losses. Thus the southwestern lines indicate a decrease of 19.2 per cent., the Pacific 16.9 per cent., the northwestern 10.4 per cent., the trunk lines 12.4 per cent. and the central western 5 per cent.

Percentages being in order, this table, which shows the trend of gross and net earnings for ten months of the calendar year, becomes quite apropos:

	Per cent. inc. Gross, 1907	Net, 1907
January	8.2	*2.4
February	7 7	*5.9
March	10.2	*0.2
April	23.6	25.5
May	19.3	17.5
June	15.7	10.6
July	16.6	5.4
August	12.4	1 4
September	10.2	*8.1
October	8.8	*8.0

* Decrease.

For the ten months' period returns of practically identical roads show that gross earnings amounted to $1,503,468,000, the gain over the like period in 1906 being $168,321,000, or 12 per cent. Net earnings for the ten months ending with October aggregated $437,747,000, a gain of $11,234,000, or 2 per cent., as compared with the figures reported for the same ten months of 1906.

Leading increases in net earnings for October, as compared with that month in 1906, are set forth in the following:

Delaware & Hudson	$336,079
Pennsylvania, west of Pittsburgh and Erie	194,300
Chesapeake & Ohio	183,318
Reading	152,466
Colorado & Southern	136,670
Yazoo & Mississippi Valley	108,729
Pittsburgh, Cincinnati, Chicago & St. Louis	105,249

These figures record the leading individual decreases in October net earnings:

Southern Pacific	$1,420,403
Atchison	1,290,191
Erie	903,856
Pennsylvania, east of Pittsburgh and Erie	410,400
Union Pacific	335,037
St. Louis & San Francisco	165,538
Baltimore & Ohio	142,378
Rock Island	114,294
Canadian Pacific	104,509
Illinois Central	102,053

By way of completing the record as to gross earnings for October, we might add that a number of roads never report monthly returns of gross and net receipts, being content to publish the figures for gross earnings only. However, in order to get a better line on the actual results as to gross earnings for October, we have combined all the returns thus far made, the result being a total for gross earnings of $204,053,384, which figures represent a gain of 14 per cent. over those for October, 1906.

BUILDING LESS ACTIVE.

Financial conditions caused a sharp falling off in new building ventures in November. Reports to BRADSTREET'S from seventy-nine cities of the United States for that month show a total estimated value of building permits filed of only $30,236,774, as against $52,204,658 in October, and $47,731,940 in November a year ago. There is here shown a decrease of 42.1 per cent. from October, and of 36.6 per cent. from November a year ago. Following will be found the record for November, with the percentages of gain or loss as compared with November a year ago:

	Nov., 1907	Comp'd with Nov., 1906 Inc.	Dec.

* New work. † Alterations.

It will be seen that only twenty-four out of seventy-nine cities, or less than one-third, show gains over November a year ago.

Building at five Canadian cities for November was valued at $1,156,117, as against $1,371,332 in October, and $2,739,212 in November, 1906. There is here indicated a decrease of 57.7 per cent. from November last year, and of 15.8 per cent. from October this year.

THE COAL ROADS AND THE HEPBURN BILL.

Serious difficulties confront various railway organizations in connection with their ownership of coal-mining properties or of the stocks of other corporations which hold and operate such concerns. One of the important provisions of the Hepburn railroad bill passed by the last Congress was the section reading as follows:

> From and after May 1, 1908, it shall be unlawful for any railroad company to transport from any state, territory or the District of Columbia to any other state, territory or the District of Columbia or to any foreign country any article or commodity, other than timber or the manufactured products thereof, manufactured, mined or produced by it or under its authority or which it may own in whole or in part, or in which it may have any interest, direct or indirect, except such articles or commodities as may be necessary or intended for its use in the conduct of its business as a common carrier.

This in effect is a command to railway companies having any interests in the production of coal, either anthracite or bituminous, to divest themselves of the same on or before May 1, 1908, under severe penalties. In fact, so drastic are the latter that, in spite of the opinions of various eminent legal authorities that the provision in question would not be upheld in the courts, there is alleged to be hesitation on the part of the companies as to instituting test cases. According to current accounts the managements of the different companies involved are not a little perturbed, and some reports say that they have been holding consultations as to the way in which the novel and difficult situation can best be met, an appeal to Congress and the Executive for a modification of the Hepburn bill being one of the suggestions which is heard.

While a large number of roads in all parts of the country are affected, the position of the anthracite coal railways is particularly interesting. These corporations own or control directly 90 per cent. of the anthracite production of the United States, and are interested in the transportation and marketing of the remaining 10 per cent. under agreements. Among the most valuable assets of such companies as the Reading, Lehigh Valley, Delaware & Hudson, Lackawanna, Erie, etc., are their coal lands and mines, these properties in some cases being included in security for the bonds of the railways or being subject to the liens of separate bonded obligations. One of the bituminous coal roads, the Buffalo, Rochester & Pittsburgh Railway Company, soon after the enactment of the Hepburn law, adopted an expedient which it was thought might be generally followed. In that case the railroad company's coal lands and mines were held by a subsidiary organization, the Rochester & Pittsburgh Coal & Iron Company, all the stock of which was held by the railway company. In the autumn of 1906 all of the coal interests in question were transferred to a new corporation called the Mahoning Investment Company, and the $4,200,000 capital stock of the latter was then distributed among the shareholders of the railway in the form of a 25 per cent. stock dividend. There is, however, some question as to whether this does not constitute a palpable evasion of the law, while it is pointed out that in a number of cases it would be impracticable to put such a plan into effect, inasmuch as the liens which bondholders have on the coal properties of the companies would constitute a bar to the distribution of the ownership of the same, or the proceeds of any sale, actual or constructive, among the stockholders only. It will thus be seen that the matter is greatly complicated and that much danger to a vast amount of capital is involved. In this critical situation it is understood that the principal companies concerned are opposed to any attempts at evading the law, and it also appears that the most probable course will be to present to Congress the evils inherent in such a crude piece of legislation as the section under consideration, in the hope that its modification or an extension of the time limit, thereby allowing opportunity for a more thorough examination, will be granted.

OUR EXPORT TRADE EXPANDS.

Despite unsettlement in domestic trade growing out of the acute financial conditions and the dislocation of domestic exchanges, November, a short month, shows the largest volume of export trade ever recorded in any month in the country's history. For the first time, indeed, the volume of exports exceeded $200,000,000, the excess over October being 13.3 per cent., over November a year ago it is 12 per cent., and the excess over the hitherto record month of December, 1905, is 2.3 per cent.

The causes of this large export trade movement are to be found undoubtedly in the heavier takings of our grain and cotton in that month than in November a year ago. The gain in grain exports may be regarded as a natural result of the enlarged demand for our surplus growing out of smaller crops in Europe as a whole. The excess in cotton, however, may be partially chargeable to the later movement this year causing a heavier relative outgo in November, and the decrease shown for three months of the present cotton season, as compared with a year ago, gives color to this view. The details of movement for November are to be found in another column, but the summary given herewith may be found of interest:

	1907	1906
Breadstuffs	$24,736,636	$15,416,219
Meats and dairy products	12,800,093	11,756,730
Animals	2,043,200	2,638,433
Cotton	75,398,737	68,393,086
Mineral oils	7,794,331	6,739,334
Total above	122,772,997	104,943,802
Total other exports	81,671,863	77,711,883
Total all exports	204,444,860	182,655,685

Gains of over $9,000,000 in breadstuffs, of $7,000,000 in cotton, of over $1,000,000 each in meats and oils, afford the best proof that there is a demand for our products abroad "at a price." Another interesting item of gain is the increase of nearly $4,000,000 in "other exports."

The imports and exports of merchandise for November and the eleven months of this year compare with corresponding periods of the two preceding years as follows:

November	1905	1906	1907
Imports—Free of duty	$46,647,695	$56,962,303	$48,214,252
Dutiable	51,636,619	62,794,040	62,574,857
Total	98,284,314	119,756,343	110,789,109
Exports—Domestic	168,383,125	180,588,575	202,440,386
Foreign	1,944,796	2,067,110	2,004,474
Total	170,327,921	182,655,685	204,444,860
Excess of exports	72,043,607	62,899,342	93,655,751
11 mos. ending Nov.			
Imports—Free of duty	482,755,292	526,017,414	506,533,023
Dutiable	595,246,459	660,134,398	734,351,079
Total	1,078,001,751	1,186,151,812	1,330,884,102
Exports—Domestic	1,402,023,102	1,584,618,061	1,690,207,114
Foreign	25,229,173	23,225,396	25,992,527
Total	1,427,252,275	1,607,843,457	1,716,289,641
Excess of exports	349,250,524	421,691,645	385,405,539

Owing to the slight shrinkage in imports (a decrease of 7 per cent. from November a year ago), the excess of exports over imports for November is very large; the heaviest, in fact, of recent years. For eleven months our exports exceed those of 1906 by 7 per cent., while imports gained 12 per cent. over a year ago.

The recent very heavy gold-import movement lends interest to the following compilation of gold imports and exports for the month of November and the eleven months ending therewith:

November	1905	1906	1907
Imports	$5,202,790	$8,035,274	$63,463,036
Exports	1,137,318	1,963,757	615,169
Excess of imports	4,065,472	6,971,517	62,847,867
11 mos. end'g Nov.			
Imports	46,264,524	147,962,143	98,837,722
Exports	44,125,935	44,828,263	54,211,240
Excess of imports	2,138,589	103,133,880	44,626,482

There is here shown a total of imports for November seven times that of November a year ago, and $28,000,000 larger than the total imports in the preceding ten months. Still our imports for the eleven months are fully $50,000,000 smaller than in the like period a year ago. In April and May of 1906, and again in September and October of that year, it will be recalled, our imports were very large. This year our exports were notably large only in June.

VANDERBILT DIVIDENDS.

For over a fortnight past the financial district has awaited with interest and uncertainty the developments in regard to the dividend policy of the New York Central Railroad Company. It would have been no surprise to Wall street if the quarterly declaration represented a reduction of the annual dividend rate from the 6 per cent. annual basis on which the stock of the company was placed about a year ago. Taking into consideration the fact that the company is known to be in such a position that the raising of a considerable amount of fresh capital is necessary for the completion of the improvement work of the company, and that as yet the management has been unable to formulate any satisfactory plan to that end, it appeared the part of conservatism to return to a 5 per cent. dividend rate upon the stock, and the probability of such action was employed as a bearish argument in connection with the recent decided heaviness of New York Central shares in the market.

Doubt on this subject was, however, practically set at rest by the announcement on Tuesday that the Lake Shore & Michigan Southern, in addition to declaring its regular half-yearly dividend of 6 per cent., had added thereto 2 per cent. extra, and that the Michigan Central also had declared 2 per cent. extra besides its regular semi-annual 3 per cent. In short, it was made plain that the chief controlled roads of the New York Central system were to supply the money for the current quarterly dividend on the latter's stock, and as was generally expected would be the case after this action, the directors of the Central on Wednesday declared the regular 1½ per cent. for the quarter.

Accompanying the dividend declaration, the usual statements of the earnings of the New York Central and its controlled lines (excepting the Big Four) for 1907 were made public, the figures being partly estimated. These are grouped to show the outcome as to gross earnings, expenses and net for the separate roads and the whole system:

Gross earnings	1907	*Increase*
New York Central	$98,713,200	$6,623,400
Lake Shore	45,018,200	2,473,800
Michigan Central	28,588,400	2,310,800
Lake Erie & Western	5,112,400	*100,400
Total system	177,430,200	11,307,600
Operating expenses		
New York Central	75,624,700	9,362,700
Lake Shore	34,175,200	1,499,400
Michigan Central	23,155,100	1,424,800
Lake Erie & Western	3,861,500	1,200
Total system	136,816,500	12,288,100
Net earnings		
New York Central	23,088,500	*2,739,300
Lake Shore	10,843,000	974,400
Michigan Central	5,431,300	886,000
Lake Erie & Western	1,250,900	*101,600
Total system	40,613,700	*980,500

* Decrease.

Following are the detailed reports of the New York Central and Lake Shore railroads:

NEW YORK CENTRAL.

Year ending December 31	1907	*Increase*
Earnings	$98,713,200	$6,623,400
Expenses (76.61 per cent.)	75,624,700	9,362,700
Net earnings	23,088,500	*2,739,300
Other income	11,276,000	3,568,300
Gross income	34,364,500	829,000
First charges and taxes	23,318,300	759,400
Available for dividend	11,046,200	78,600
Dividend (6 per cent.)	10,717,900	2,885,000
Surplus	328,300	*2,806,400

* Decrease.

LAKE SHORE AND MICHIGAN SOUTHERN.

Year ending December 31	1907	*Increase*
Earnings	$45,018,200	$2,473,800
Expenses (75.91 per cent.)	34,175,200	1,499,400
Net earnings	10,843,000	974,400
Other income	5,100,000	945,500
Gross income	15,943,000	1,920,900
First charges and taxes	8,641,600	1,106,100
Available for dividend	7,301,400	814,800
Dividend (12 per cent.)	$5,936,000	
Extra div'd (2 per cent.)	989,300	
	6,925,300	1,978,700
Surplus	376,100	*1,163,900

* Decrease.

The feature of the above is the great increase in operating cost and the consequent reduction in the net as compared with 1906. In the case of the New York Central the operating expenses amounted to no less than 76.61 per cent. of the gross. The Lake Shore and the Michigan Central alone show increased net revenue, and it is the extra dividends on the Central's holdings of these, amounting to approximately $2,200,000, which have enabled it to pay the 1½ per cent. quarterly dividend. In fact, without this addition to its available resources there would be shown for the three months ending December 31 a deficit, after the dividend, of nearly $2,000,000, and for the full year a deficit of nearly the same amount. It is not at all unnatural that there should be more or less criticism directed at the policy which the managements of these companies have seen fit to pursue, which modifies greatly any satisfaction which might have been aroused by the fact that the dividend was not passed or reduced.

EDITORIAL NOTES.

It has already been pointed out that shippers in New England and in other sections of the country have a considerable interest in the conflicts which have developed between the managements of the New York, New Haven & Hartford Railroad Company and those of other companies. It cannot be said that the latest developments in these matters afford much promise of an early amicable adjustment of the difficulties. In fact, so far as the New Haven's refusal to consent to the 50-cent per diem payment for cars of other roads detained upon its lines is concerned, it appears that the question will have to be decided in court, the American Railway Association having taken steps to submit it to a judicial determination. On the other hand, the New Haven, at the request of the Interstate Commerce Commission, has this week deferred cancellation of through rates via Jersey City with all the roads reaching that point, except the Pennsylvania and the Lehigh Valley, until March 31, the original order in that respect having made December 17 the time limit. It is stated that this step is for the purpose of allowing the roads which are involved an opportunity to adjust themselves to the changed condition. At the same time the Reading and the other companies which were left out in the cold, as far as through New England freight traffic is concerned, by the New Haven's actions in the premises, are by no means disposed to acquiesce in that company's policy. In fact they have applied to the Interstate Commerce Commission for action by the Department of Justice to have the New Haven restrained, in view of the discrimination involved and the hardship which the abolition of through rates would work to shippers. The New Haven management, however, continues to assert that the complaining roads could make use of the Poughkeepsie Bridge route, and that the continuance of the through rate would necessitate an enlargement of the New Haven's terminals on the Harlem river at an expense of over $1,200,000 in order to give proper service, which outlay, it is contended, would be unadvisable under present conditions.

Among the important problems which confront the money and securities market are the arrangements which will have to be made during the early part of 1908 in reference to the large amount of short-timed notes of railways and other corporations which will arrive at maturity. It is pointed out that between January 15 and the beginning of April about $37,000,000 of such issues become payable, and will have to be paid off or extended. Under present financial conditions it would seem an impossibility for the companies to sell long-term bonds bearing a low interest rate, and the natural inference, therefore, is that they and the bankers acting for them in these matters will be obliged to seek an extension of the obligations in question. The interest rates upon the different notes included in the above total at present vary from 4½ to 6 per cent., and it would seem that extending them for even a year or so would involve the disagreeable necessity of offering a considerably higher interest rate. A striking example of the conditions which govern such operations at this time has been afforded by the recent action of the Canada Southern Railway in reference to the extension of its $14,000,000 of first mortgage 5 per cent. bonds which become due on January 1, 1908. This case involved a first lien upon a solvent and valuable railway property reënforced by the guarantee of the Michigan Central Railroad, thereby leaving no room for doubt about the stability of the bonds. It was, however, found needful, in order to secure an extension of the issue until 1913, to make the rate of interest 6 per cent. It is therefore not a matter of doubt that in order to refund the maturing railway and other notes, the companies responsible for them may have to consent to the payment of rates of interest which might be regarded as really exorbitant, unless there is an accumulation of idle capital available for investment or a heavy return flow of money from the interior to the eastern markets.

Companies which are obliged to reduce dividends, defer or pay the same in scrip of some kind, are now numerous, and the financial community is in expectancy of further developments of that kind. Beginning with the cut in the rate on Southern Railway preferred stock early in the season, and the decision of the Erie management to pay the regular amounts on its first and second preferred shares in interest-bearing scrip, there has been a series of such announcements, including reductions by companies of such importance as the Amalgamated Copper, Calumet & Hecla, Anaconda Copper, Quincy, and so forth; the postponement of action as to its common stock dividend by the American Cotton Oil Company (which was also the course taken this week by the New York Air Brake Company), and the payment in 4 per cent. certificates of indebtedness of the 3 per cent. half-yearly one of such a leading road as the Atlantic Coast Line, to say nothing of the Western Union's dividend in the form of stock, which came about the same time, or the omission of any payment on the Chicago Great Western preferred "A" shares. Rumor has also made free with the names of companies like the Missouri Pacific, the apparent delay in taking action on that stock being regarded as significant, while the president of the Distillers' Securities Company has frankly stated that there will undoubtedly be a reduction in the payment on its shares. Furthermore, while the street is in the dark as to what the Amalgamated Copper directors will do at their meeting next week, it is generally thought that the reduction made three months ago, from 2 per cent. to 1 per cent. for the quarter, will be followed by another cut or possibly by a suspension of dividends on the stock for the present, for which action the condition of the copper market would furnish abundant reason. In fact, the reductions in the rates on copper-mining stocks stand apart from the similar developments in most other cases, which represent the patent necessity of using the funds of the corporations in their business instead of distributing them among the stockholders. It is to be noted, however, that besides the extra declarations of the present week on the Lake Shore and the Michigan Central stocks, thereby permitting the New York Central Company to avoid a curtailment in its rate, the Pennsylvania Company, the organization which represents the western part of the Pennsylvania Railroad system, has just advanced its annual dividend from 3 per cent. to 4 per cent. In these instances, however, there is little dissent from the idea that the aforesaid extra and increased dividends were decided on simply to swell the coffers of the controlling companies and enable them to make a better showing.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Lands—Sale—Statute of Frauds.

The Supreme Court of Indiana held, in the case of Collins vs Green, that a contract by which one person employed another for a consideration to buy him a farm and convey it to him was within the statute of frauds (section 6629 Burns, 1901), and would not support an action for a breach thereof unless in writing, and that where the second party after accepting such employment bought the farm in his own name with his own money and sold it to a stranger for a higher price, there was no part performance of his verbal contract with the first party to take it out of the statute.

Attorney and Client—Void Agreement.

The New York Court of Appeals held, in the Matter of Snyder, that an agreement between attorney and client that neither of them should settle the litigation without the consent of the other was void as against public policy; that the invalidity of such a provision rendered inoperative a further provision of the agreement that the attorney should receive for his compensation a certain percentage of the recovery, the two provisions being connected, and that where in such a case the litigation was settled by the client without the consent of the attorney, the claim of the latter against his client was for the actual value of his services without reference to the agreement.

North Carolina Rate Decision.

The Supreme Court of North Carolina recently reversed the decision of Justice Long in fining the Southern Railway Company for selling tickets at rates in excess of 2¼ cents per mile prescribed by the new rate law, on the ground that no criminal offense was charged in the bill of indictment against the Southern Railway. At the same time it declared the rate law constitutional in all essential particulars, and held that the federal courts had no power to enjoin a criminal prosecution, and that while the state was not nominally a defendant in the case, it was so in reality, and that therefore the case was brought within the prohibition of the Eleventh Amendment to the Constitution.

Pharmacists—Registration—Law—Validity.

The legislature of the state of Minnesota at its last session passed an amendment to the registered pharmacist law which provided that upon the payment of the fee of $10, any person over twenty-one years of age who had had fifteen years' or more practical experience in a drug store where physicians' prescriptions were usually compounded, and who had been a bona fide resident of the state for the year last past, might be entitled to be registered and receive a certificate authorizing him to practice as a registered pharmacist without examination, provided, however, that application for registration under the provisions of the act should be made to the board within ten days from and after the enactment of the law. The court held the law constitutional, saying that the last proviso related to the one just preceding it and referred only to those who might be exempt from examination.

Express Company—Receipt—Contract.

The New York Supreme Court at an Appellate Term held, in the case of Addoms vs. Weir, as President, etc., that where a package is intrusted by the owner to a messenger for delivery to an express company for transportation, the messenger is constituted the agent of the owner for all purposes necessary to the shipment, and as such is authorized to enter into a special contract limiting the liability of the company in case of loss which shall bind the owner, and that the company is justified in relying on the apparent authority accompanying the lawful possession of the package, and in the absence of some special circumstance calling for unusual care, is not obliged to examine into the authority of the person presenting the package to make a contract for limited liability. The court further held that where a plaintiff, the owner of an alleged lost package, introduces as part of her proof a receipt containing a special contract of limited liability, she is bound by the terms of such contract.

Bank Shares—Tax—Shareholder.

An act of the Kentucky legislature approved March 15, 1906, provided that an annual tax at the same rate which might be fixed on other property for state purposes should be imposed on each $100 of value of shares of banks and trust companies incorporated under the state laws and of national banks doing business therein, which should be paid to the state treasurer annually by such banks and trust companies for and on behalf of the owners of such shares of stock. The Kentucky Court of Appeals held, in the case of Hager, Auditor, vs. Citizens Bank of Lebanon, that the purpose of the act was to impose a tax upon the property of the banks and the trust companies. The court further held that when a bank, in obedience to this law, paid for and on behalf of its shareholders the taxes due by him on his shares of stock, the law imposed an obligation upon the shareholder to repay to the bank the amount so paid for his use and benefit, and that upon this obligation raised by law the bank might sue and recover.

Railroad Crossing—Accident—Negligence.

The Supreme Court of Indiana held, in the case of Indianapolis Street Railway Company et al. vs Waddington, Adm'r, that where the negligent act of a street railway resulting in a collision with a locomotive properly operated caused a railroad employee to spring from said locomotive, when he was killed by the negligent operation of another locomotive on the railroad, the negligence of both the street railway and of the railroad were proximate causes of the injury, and both were liable. The court held that it could not be said as matter of law that street-railway employees were not guilty of negligence in going upon a crossing when an engine was approaching at three times the lawful rate of speed because they could have crossed in safety if the lawful rate of speed had not been exceeded, especially when it appeared that 250 to 350 trains passed over the crossing every day at an average rate of speed of two or three times the legal rate.

Insurance—Policy—Creditor—Contract.

The New York Court of Appeals held, in the case of Reed vs. Provident Savings Life Assurance Society of New York et al., that a life-insurance policy is not a contract of indemnity, but is a contract to pay a sum of money upon the death of the assured in consideration of payments made to the company during his life. In the case before it the court held that a policy procured by the plaintiff upon the life of his uncle, as his nephew and creditor, payable to himself as such and to the children of the assured, pursuant to a contract and agreement made between them whereby he was to pay the premiums and be repaid with interest and a substantial amount in addition thereto out of the proceeds of the policy on the death of the assured, was a valid and enforcible policy, and that when upon the failure of the company the plaintiff procured in place thereof a policy in another company on the same life and under the same contract, but payable to himself alone, he then being a creditor of the assured, the substituted policy might be enforced and its proceeds distributed in accordance with the agreement, and that it was of no consequence as far as its validity was concerned that the plaintiff's interest as a creditor of the assured when he procured the policy was less than its amount.

Payment—Mistake—Account.

The case of Kessler et al. vs. Herklotz et al., recently decided by the New York Court of Appeals, arose out of an action to recover money alleged to have been paid by mistake. It appeared that the defendants in the case, brokers in New York, executed orders as such for various German customers. The orders came through one Garbrecht, and were all by agreement charged to him, and he guaranteed the account. Among others, one Luerman gave such orders, and money was due to the defendants thereon. On demand made by Garbrecht, Luerman cabled to the plaintiffs, bankers and commission merchants in New York City, to pay to the defendants $35,000 "for account of Garbrecht," and to draw on Luerman. The plaintiffs made the payment and took an acknowledgment that the money was received on Garbrecht's account, taking steps at once to collect the amount of the payment from Luerman. The latter failed within a few days and Garbrecht refused to admit liability to the plaintiffs, who then brought suit against the defendants, claiming that the money was paid under mistake of fact. The court held that no material mistake of fact was shown, that the cable message could not and did not mislead the plaintiffs, inasmuch as the words "for account of Garbrecht" did not pledge Garbrecht's credit to plaintiffs, but merely indicated the person to whom defendants were to credit the payment, in making which the plaintiffs gave exclusive credit to Luerman, and relied solely on his responsibility.

BUSINESS NOTES.

World's Tea Production.

The world's production of tea in 1906, according to the *Tropical Agriculturist*, was about 682,000,000 pounds. This figure is based upon the quantity exported from tea-producing countries. In 1897 the total production was 556,000,000 pounds, a gain of 126,000,000 pounds in ten years, or 22 per cent. Changes have taken place in the decade in the source of exports. China, which was once the leading tea producer of the world, has lost ground, while India and Ceylon have increased their exports. Java has likewise gained even more rapidly than any of the other countries mentioned. In 1896 that country exported 9,568,732 pounds, against 27,760,000 pounds in 1906. The British colony of Natal, in 1896, exported 792,100 pounds, and in 1906, 1,650,000 pounds. Apart from these two minor countries, India, Ceylon, China and Japan are the leading producers and exporters. The figures are given in millions of pounds, and the grand total includes Java and Natal:

	India	*Ceylon*	*China*	*Japan*	*Total, pounds*
1896	150.6	110.0	240.1	65.5	576.7
1897	152.5	114.4	212.8	63.9	555.8
1898	158.7	122.3	215.9	61.5	571.7
1899	177.3	129.6	224.8	65.0	611.0
1900	192.5	149.2	196.4	61.0	616.3
1901	182.8	144.2	162.1	61.1	568.8
1902	184.0	150.8	206.7	64.7	625.0
1903	209.9	149.2	224.4	70.0	678.5
1904	214.7	157.9	193.8	61.6	655.5
1905	217.2	170.1	182.9	54.7	652.5
1906	236.7	170.5	188.3	56.7	681.8

Foreign Commerce of New York.

George Wilson, secretary of the Chamber of Commerce, has forwarded advance sheets of his annual figures of the commerce of the port of New York, which show the following for the fiscal year ended June 30, 1907:

	Port of New York	*Total all ports U. S.*
Foreign merchandise, including coin and bullion—		
Imported	$914,018,529	$1,591,878,298
Exported	19,460,994	42,966,663
Consumed and on hand	895,457,535	1,548,881,635
Domestic merchandise, including coin and bullion—		
Exported	678,730,861	1,945,992,6'4
Excess of foreign imports over domestic exports at the port of New York	216,726,674	....
Excess of domestic exports over foreign imports at all ports of the United States	....	397,111,029
Total foreign commerce—		
1906-07	1,613,110,384	3,580,867,625
1905-06	1,460,812,356	3,215,533,870
Increase, New York	152,298,028	....
Increase, all U. S.	....	365,333,755

PORT OF NEW YORK.

Fiscal year ended	*Total foreign commerce*	*Increase*
June 30, 1907	$1,613,110,384	$152,298,028
June 30, 1906	1,460,812,356	128,900,667
June 30, 1905	1,331,911,689	84,656,6 3
June 30, 1904	1,247,255,016	35,004,183
June 30, 1903	1,212,250,822	67,221,522
June 30, 1902	1,145,029,311	*43,198,321
June 30, 1901	1,188,227,632	19,442,073
June 30, 1900	1,168,785,559	108,071,646
June 30, 1899	1,059,813,913	62,858,497
June 30, 1898	996,955,416	*39,255,756

ALL PORTS OF THE UNITED STATES.

June 30, 1907	$3,580,867,625	$365,333,755
June 30, 1906	3,215,533,870	356,882,471
June 30, 1905	2,858,651,399	148,979,887
June 30, 1904	2,709,671,512	103,324,224
June 30, 1903	2,606,347,288	142,752,091
June 30, 1902	2,463,595,197	*67,250,024
June 30, 1901	2,530,845,221	101,612,435
June 30, 1900	2,429,232,786	291,590,195
June 30, 1899	2,137,642,591	68,279 522
June 30, 1898	2,069,363,069	35,782,876

* Decrease.

The Leather Industry and the Forest.

No other nation produces half as much tanned, curried and finished leather as the United States, which yields over one-fourth of the world's supply. Six hundred and seventeen tanneries contribute to this output. The raw material includes a hundred and eight million hides and skins, including a large number from Argentina. To tan this immense quantity of leather, valued at over $250,000,000, last year required over a million and a quarter cords of tanbark, worth nearly $13,000,000, and more than six hundred and fifty thousand barrels of tanning extract, worth $8,700,000. Over two-thirds of the tanbark consumed comes from hemlock, and over one-fourth from oak; chestnut and other woods contribute the remainder. More extract is secured from chestnut, however, than from all other domestic woods combined. A small quantity of extract of a little over a thousand barrels comes from the roots of palmetto. Although the tanning industry is widely distributed over the United States, the greater part of it is carried on in the states of Pennsylvania, New York, Michigan and Wisconsin, which use more than two-thirds of the tanning materials consumed. Pennsylvania alone consumes over nine hundred million pounds of bark and extract worth $8,000,000, or 37 per cent. of the total value. Since 1900 the quantity of tanbark used has fallen off 15 per cent., although its value has increased. During this period the consumption of extract increased from 67,000 to 650,000 barrels a year, of which nearly 90,000 barrels were imported. Relatively small quantities of hemlock bark were imported from Canada, and of mangrove bark from the West Indies and Africa. In weight, four times as much quebracho was imported in bark as in extract form.

Pig-Iron Curtailment.

The *Iron Age* says that "even with the cutting off of production to the extent already enforced, stocks of iron have increased, though not at the rate of the late months of 1903 and the early months of 1904. A chief contrast between the blast-furnace situation in 1903 and that of 1907 is due to the expansion in production that for nearly all of this year has kept the weekly average of active capacity in coke and anthracite iron above the 500,000-ton mark. On September 1, 1903, the active weekly capacity was 360,197 tons. Active blast-furnace capacity, in gross tons, September 1 to December 1, 1907, compared with the period of 1903:

	Number furnaces, 1907	*Weekly capacity,* 1907	*Number furnaces,* 1903	*Weekly capacity,* 1903
September 1	331	507,768	269	360,197
October 1	333	511,397	254	353,142
November 1	304	491,436	210	273,715
December 1	226	347,372	186	244,156
			1904	1904
January 1	..	....	155	185,636
February 1	..	....	188	273,692
March 1	..	....	203	308,751
April 1	..	....	220	337,257
May 1	..	....	230	368,244

We have carried the statistics for the 1903-04 movement into the early months of 1904 to show the rebound from the low point reached on January 1, 1904. It is certain that on the coming January 1 fewer furnaces will be in blast than at the beginning of the present month. It will be interesting to note whether the parallel goes farther, with an advance on February 1 beyond the figure for December 1. It is to be noticed that in 1903 the most abrupt change was between October 1 and November 1—a falling off of 80,000 tons, or 23 per cent.—while for this year, if the figures were plotted, the steep curve would be between November 1 and December 1, the actual decrease in active capacity being 144,000 tons, or over 29 per cent. The number of furnaces blown out in October, the critical month in 1903, was forty-four, against seventy-eight in November, the critical month of 1907. Thus, both in number of furnaces and in weekly capacity cut off, the movement of last month was about 180 per cent. of that in October, 1903. The present curtailment is more drastic than that of 1903, since the rate of pig-iron production before it began was about 140 per cent. of the rate of 19,000,000 tons a year, at which iron was being made previous to the October slump four years ago."

Chile and Immigration.

The President of Chile, Señor Don Pedro Montt, advocates the granting of a government subsidy to a line of mail steamships running between Valparaiso and Chile, and incidentally his government has issued a decree governing immigration. Chile, with a population of only 4,000,000, has a territorial extension equal to the combined areas of Germany, Switzerland, Holland and Belgium; a temperate climate adapted to the cultivation of wine grapes, and great mineral deposits, the most productive of which at present are the nitrate and copper. Naturally Chile wants more inhabitants. The decree governing immigration provides for agencies in Europe administered by a general agent with headquarters in Italy, and by a corps of agents, sub-agents, deputy agents and physicians. This force is to promote and restrict immigration from Europe to Chile. The promotion is to be effected by an exhibition in Italy of Chilean products and views, and by the publication of pamphlets and lectures on Chile's resources, industries, labor conditions, etc.; the restriction is to be made on grounds of disease, immorality and incapacity of the would-be immigrants to earn their livings. Passed immigrants are to have free transportation, and those versed in certain industries, as galvanoplasty, the manufacture of bone buttons, perfumery, neckties, etc., will be given free freightage of the machinery and elements essential to the prosecution of such industries.

CURRENT BUSINESS NEWS.

Commercial.

Returns to the Bureau of Statistics of the Department of Commerce and Labor show the following figures for canned-meat shipments from Chicago for November, 1905-07, and for the eleven months ending November: November, 1905, 17,028,675 pounds; 1906, 8,016,000 pounds; 1907, 7,227,150 pounds. Eleven months ending November, 1905, 135,381,450 pounds; 1906, 111,698,925 pounds; 1907, 74,445,150 pounds.

The tonnage of the German mercantile marine has increased in the past year by 264,424 tons. The total is 3,911,334 tons. The sailing vessel tonnage has decreased 93,251 tons since 1900.

The annual report of the Manitoba Department of Agriculture shows that the total grain crop for the province was 99,102,676 bushels.

The following statistics, showing the foreign commerce at the port of New York during November, were given Wednesday:

Merchandise	1907	1906	
Exports	$64,081,878	$52,503,126	Inc. $12,478,752
Imports	63,599,063	70,307,145	Dec. 6,708,082
Excess exports	1,382,815	....	Inc. 19,185,834

Gold			
Exports	....	34,691	Dec. 34,691
Imports	57,550,403	625,028	Inc. 56,925,375
Excess imports	57,550,403	590,337	Inc. 56,960,066

Snow is out with a revised estimate of the corn crop, making the total 2,550,000,000, about the same as previously estimated, but the quality is very poor, averaging only 78, or 4 points less than November and 20 points less than normal. Owing to the poor quality less than usual will come to market. He makes the condition of winter wheat December 10, 89.7, against 95 last year; area, 30,774,000, or 3 per cent. less than last year.

The directors of the Utah Consolidated Mining Company, at a meeting Monday, declared a quarterly dividend of 50 cents a share, a reduction of 50 cents as compared with the dividend of $1 a share declared in the preceding quarter. This makes $4.50 declared for the year. The dividend declarations were as follows: $1 50 for the first quarter, $1.50 for the second quarter, $1 for the third quarter and 50 cents for the fourth quarter.

The value of locomotives exported in October showed a gain of more than $500,000 over October, 1906. Exports for October appear as follows:

To	1907	1906
Europe	$10,307	....
British North America	72,561	$89,684
Central America and British Honduras	47,550	33,314

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom, France, Italy, Spain and North Africa—The outlook for the crops is unchanged from our last report. Germany—The outlook is less favorable, as the weather is unseasonably wet and mild. Hungary—Recent reports were of very favorable weather, but the weather is now dry and cold. Roumania—It is now snowing. The outlook for the crops has improved during the week as a result of very mild weather. Supplies are rather larger and holders reserved. Russia—A revised official estimate for spring wheat in seventy-two governments places the yield with corn and oats as follows, in bushels:

	1907	*Prelim'y est., Sept. 12, 1907*	*Final, 1907*
Spring wheat	347,600,000	330,400,000	267,200,000
Oats	955,000,000	929,000,000	699,000,000
Corn	47,400,000	47,200,000	65,600,000

Asia Minor—The weather is favorable for seedings. Australia—New South Wales, heavy rains Argentina—Our agent reports that harvesting is progressing satisfactorily, and he estimates the exportable surplus for wheat as 128,000,000 bushels.

The regular monthly statement prepared by the Bureau of Statistics at the Custom House shows that the total value of free and dutiable goods remaining in bonded warehouses at this port for the month ending November 30, 1907, was $44,149,528, as against $40,350,637 for October, a gain of $3,798,891.

The Roumanian wheat acreage is reduced fully 25 per cent. and only latest seedings are in good condition, owing to prolonged drought of autumn.

Russian wheat crop on latest estimates is 13,000,000 bushels less than last year and 143,000,000 less than two years ago, but this is partially offset by rye, which is estimated at 135,000,000 more than last year and 46,000,000 more than two years ago.

India's cotton crop is officially estimated at 40 per cent. below the yield of last year.

The snow map up to 8 o'clock Monday night showed the line of snow covering extended south through the southern portion of the Ohio valley states, northern half of Iowa, nearly all of Nebraska, and portions of northwest Kansas; also throughout the greater part of the eastern wheat belt, south into Virginia. Since Monday night there have been quite general snows throughout the entire southwest.

The Census Bureau report on the quantity of cotton ginned from the growth this season to December 13 makes the amount ginned 9,281,077 bales, counting round bales as half bales, compared with 11,112,789 bales in 1906 and 9,297,819 bales in 1905; number of round bales included 167,485, compared with 243,096 last year and 252,137 in 1905; number of sea-island bales 65,145, contrasted with 49,361 last year and 90,836 in 1905; number of active ginneries 27,152, against 28,299 last year and 28,757 in 1905.

Financial.

Judge Hough, of the United States Circuit Court, handed down his decision Friday on the finding of Master Arthur H. Masten in the 80-cent gas case, in which he sustains the master and finds in favor of the Consolidated Gas Company.

The London Stock Exchange will be closed December 25, December 26 and January 1.

The Pennsylvania Company has declared a semi-annual dividend of 4 per cent., payable December 31. This is an increase of 1 per cent. over the previous disbursement, which was made on June 29 last.

The Lehigh Valley Railroad Company has declared the usual semi-annual dividend of 2 per cent. and an extra dividend of 1 per cent. on its common stock, and of 5 per cent. on its preferred stock, payable January 11.

The Comptroller of the Currency has authorized the First National Bank of Eagle Lake, Tex., which closed its doors on November 9, to reopen for business on December 19. The Comptroller also has authorized the City National Bank of Frederick, Okla., which closed its doors on November 19, to reopen on December 20.

It is figured that over forty companies have reduced or passed their dividends this fall.

The Marblehead National Bank, of Marblehead, which on March 4, 1904, went into voluntary liquidation, on Tuesday declared a dividend of 40 per cent. The depositors have been paid in full.

The capital stock of the Union Elevated Railroad Company of Chicago has been stricken from the list of the Stock Exchange.

The Japanese financial programme has been formally settled by the council of the elder statesmen. The programme is one of retrenchment, and involves a reduction in the expenses of the army and navy for the next six years whereby the government will save $200,000,000. It also means the postponement of certain government undertakings. The curtailments, in connection with the increases in the taxes on sugar, sake, oil and tobacco, are calculated to wipe out the deficiency of the coming year. It is understood that the leaders of all parties have agreed upon the programme.

The Lake Shore & Michigan Southern directors have declared a semi-annual dividend of 6 per cent. and an extra dividend of 2 per cent. The dividend is payable January 29 to stock of record December 31. Lake Shore & Michigan Southern's dividend record for the past sixteen years has been as follows:

	Per cent.		*Per cent.*
1907	12	1899	7
1906	10	1898	6½
1905	8	1897	6
1904	8	1896	6
1903	7	1895	6
1902	7	1894	6
1901	7	1893	6
1900	7	1892	6

The dividend declared payable January 29, 1908, is 6 per cent. semi-annually and 2 per cent. extra, or at the rate of 16 per cent. per annum.

The Lake Erie & Western directors have declared a dividend of 1 per cent. on preferred stock. It has been the custom to pay 2 per cent. in January and 1 per cent. in July, making 3 per cent. per annum. The Lake Erie & Western dividend is payable January 15. Lake Erie & Western's preferred dividend record has been as follows:

	Per cent.		*Per cent.*
1907	3	1899	..
1906	3	1898	5
1905	3	1897	5
1904	3	1896	5
1903	4	1895	5
1902	4	1894	5
1901	4	1893	5
1900	2	1892	4¾

The dividend of 1 per cent. declared payable January 15 is one-half of the regular distribution at this time of the year. The company has been paying 1 per cent. in July and 2 per cent. in January. The present dividend puts the stock on a 2 per cent. basis.

Michigan Central directors have declared a semi-annual dividend of 3 per cent. and an extra dividend of 2 per cent. The dividend is payable January 29 to stock of record.

On Thursday the price of silver, in which there has been a heavy decline recently, advanced 1 1-16 to 25 1-16d. per ounce in London on a few bears covering.

With reference to last Thursday's declaration of the regular 3 per cent. half-yearly dividend on Atlantic Coast Line stock in certificates of indebtedness instead of cash, a statement explaining this departure was given out Thursday. It says: "The dividend is not payable in what is ordinarily called scrip, but in certificates of indebtedness which were issued by the Atlantic Coast Line Railroad Company in 1902, and which passed into the hands of the public. In 1903 the Atlantic Coast Line Railroad Company loaned to one of its subsidiary companies money to purchase certain properties, which were again sold in the spring of 1906 at what they had originally cost, and accepted payment for them in these certificates of indebtedness at their then market value—93—and were accepted by the railroad company at the same figure in payment of its loan. These certificates have since been held as an investment of the surplus of the railroad company, and $1,456,100 are now to be used, instead of cash, to pay the January dividend."

The dividend on De Beers deferred stock has been passed. It is understood that this action is due to the uncertain outlook for the diamond, rather than the absence of profits on recent business. The usual 20 per cent. was declared on the preferred. At the same time orders have been issued to curtail operations.

Industrial.

The new specifications for standard Bessemer steel rails, as agreed upon by manufacturers of Bessemer steel rails in the United States and Canada, have been announced. They contain several new clauses, incorporated to better safeguard purchasers. These points are such as manufacturers heretofore have not been willing to concede, and include an entirely new shrinkage clause, a new clause covering the drop test and a new clause governing finishing, particularly as regards straightening. According to the *Iron Trade Review*, "the basis will be $28 on Bessemer rails with a 9 per cent. drop, and the contract provides for an increase of 29 cents per gross ton for each additional 1 per cent. discard. This will establish standard rail prices for 1908, according to percentage of discard from the ingot and bloom, as follows:

P. ct. discard	*Price*	*P. ct. discard*	*Price*
9	$28.00	18	$30.61
10	28 29	19	30.90
11	28.58	20	31.19
12	28.87	21	31.48
13	29.16	22	31.77
14	29.45	23	32.06
15	29.74	24	32.35
16	30.03	25	32.64
17	30.32		

The new specifications include Bessemer steel rails only, and specifications on open-hearth rails will be announced at a later date."

The *Journal of Commerce* sees a gradual change in the statistical position of copper in favor of the consumer, in spite of the recent heavy reduction in production. It states that the metal is steadily accumulating here and abroad—the accumulation in both continents amounts to at least 10,000 tons a month. Of the copper produced in this country the surplus in the United States is 43,000 tons; that of Europe is given as 60,000 tons. It quotes a local statistician who estimates the 1907 production of copper for the United States at 354,000 gross tons, a decrease of almost 56,000 tons as compared with the previous year, or about 123,000 pounds. Our exports will total about 226,000 tons and imports about 125,000 tons.

It is said that American railroad men in great numbers are pouring into Mexico, seeking employment on the Mexican lines. The superintendents of the several Mexican railroads are flooded with applications for positions from these newcomers. Many of them want employment as engineers, conductors and brakemen.

Production of lead in 1906 and in preceding years is thus set forth by the Geological Survey, figures being in short tons:

1906	350,153	1901	270,000
1905	302,000	1900	270,824
1904	307,000	1899	210,500
1903	282,000	1898	222,000
1902	270,000	1897	212,000

The ore movement for the season of 1907 was 41,288,755 tons, against 37,513,595 tons for 1906, a gain of 10 per cent. Following are the shipments by ports:

	To Dec. 1, 1906	*Per ct. of total*	*To Dec. 1, 1907*	*Per ct. of total*
Escanaba	5,716,272	15.46	5,722,416	13.89
Marquette	2,743,219	7.42	3,009,360	7.30
Ashland	3,333,561	9.02	3,423,277	9.31
Superior	5,979,378	16.17	7,427,182	18.03
Duluth	11,098,175	30.02	13,445,977	32.64
Two Harbors	8,102,397	21.91	8,169,727	19.83
Total	36,973,002	100.00	41,197,939	100.00

The Creusot Works of France have begun the construction of a big wharf at Corral, Chile. This firm has decided to establish the headquarters of its South American iron industry in southern Chile.

Profits of sixty-five Lancashire cotton-spinning companies for the past twelve months amount to £877,541, an average of £13,500. Aggregate share capital is £2,591,365, and loan capital £979,372. Profit for the twelve months on capital works out at 33.86 per cent., and on share capital and loans 24.57, the heaviest on record.

It is predicted by the secretary of the National Metal Trades Association that 75 per cent. of the men laid off will be reëmployed during January.

A telegram received in London from Kimberley on Friday says that the De Beers Consolidated Mines, Limited, has ordered work restricted to five days a week.

Miscellaneous.

Two important conventions were signed Wednesday by Señor Polo, Peruvian Minister of Foreign Affairs, and Señor Balmaceda, the Chilean minister, which constitute the first step in the establishment of better relations between Peru and Chile. The first is a consular convention and the other a convention regarding the liberal professions.

The United States Senate on Wednesday removed the injunction of secrecy from the treaty now pending before it that was adopted by the nations participating in the convention at Berlin on November 3, 1906, providing certain international regulations for the operation of wireless telegraphy. Twenty-six nations took part in the convention. The regulations provide for the use of electric waves of uniform length by ships and shore stations, the publication of the charges for wireless telegrams and the establishment of an international bureau for the settlement of the accounts between ships and stations.

The construction of a telegraph line into Lhassa, the capital of Tibet, has been sanctioned. This innovation was recommended by the Chinese President at Lhassa, who, since the advent of the British expedition of 1904, has been working for the enlightenment of the Tibetans. The throne, furthermore, will give hospitals, schools and a mail service to Lhassa, and it is reported that a request has been made for permission to publish a newspaper there.

According to the report of Commissioner-General of Immigration Frank Sargent, immigrants admitted to this country in the last fiscal year numbered 1,285,349, as compared with 1,100,735 in 1906, or an increase of 17 per cent. The total amount of money brought in by the immigrants was $25,599,000, or an average of about $20 apiece. Of the total 1,199,566 persons came from Europe, and over 40,000 came from Asia, including 30,000 Japanese and 961 Chinese.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Holiday buying has had the center of the stage, and retail business has felt very perceptibly the influence of the spirit of the season. While much more marked than some time ago, however, the volume of retail buying as a whole is not up to expectations, and is certainly well below a year ago at this date. Wholesale and jobbing business naturally tends toward quiet at this time, and salesmen are very generally in from the road, but the falling off in transactions in these branches from the normal is very marked at present, and the tendency in industrial lines is still toward curtailment, instances of this being found in the iron and steel, bituminous coal, coke, lumber and cotton goods lines, in which latter a canvass is now being made by New England manufacturers as to the future of production. Sentiment as to the outlook for trade next year is very mixed.

Conditions in financial circles are still slowly but quite surely approaching normal. From the country at large there is reported a continued easing up of the situation as regards cash payments, and several cities are practically on a cash basis, with Clearing House certificates being canceled and cashiers' checks and emergency currency being retired; but it is to be noted that the premium on currency is still maintained at several large cities, and until this disappears the normal cannot be said to have been restored. The firmness in call and the scarcity of time money at New York, with the maintenance of the currency premium at or around 1 per cent., however, is taken to indicate the conserving of money supplies pending the heavy first of the year disbursements. Interior cities report more inquiry for commercial paper and quite considerable loans made on time, some Chicago money, in fact, reaching New York this week. Commercial collections are still very slow and as yet reflect little benefit from the current holiday purchasing. This latter class of buying might be better if money could be more readily obtained. Several cities, in fact, report enlarged savings-bank withdrawals, presumably due to holiday expenditures.

Despite the maintenance of high money rates, the New York securities market has shown a disposition to advance in an irregular way, though the strength is apparently due simply to covering of shorts. The declaration of the regular dividend by the New York Central Railroad contributed more or less to discourage bearish speculators, though it is not, of course, considered likely that money conditions can improve sufficiently to encourage very marked bullish activity until after the disturbing influence of the January payments is out of the way. Foreign exchange is very firm on preparations for maturing payments due abroad on January 1, demand sterling being 4.86.50.

Although inquiry for pig iron has increased in some markets, actual business continues very quiet, and prices in general are much lower, the declines ranging from 25 cents per ton to $1.50, the latter figure representing the fall in charcoal iron. In fact, the characteristic feature of the entire situation is the general suspension of furnaces and mills, and in the finished lines it is figured that new business hardly covers 33 per cent. of the total capacity. Demand for structural material is moderately good, and now that the new specifications on Bessemer rails have been announced, orders from the leading railroads for 1908 delivery are looked for. These specifications call for a sliding scale of prices based on $28 at the mill for 9 per cent. discard from the ingot, with an advance of 29 cents per ton for every additional 1 per cent. discard. As a matter of general practice the discard is now from 9 to 10 per cent., and therefore the price remains as it has been for the past five years or so, that is, $28 per ton. Demand for tinplate is very light, but it is reported that the leading can-making interest is about to place a large contract. Independent wire makers are said to be shading prices. Bar iron is weaker at Pittsburgh. The market for old material remains quiet, with prices tending downward. The output of coke is being heavily restricted, nevertheless prices are much weaker. In the west bituminous coal is easier, and it is estimated that the output has been reduced 50 per cent. during the past three months. Copper, tin, lead, spelter and antimony are all weaker. There is little interest here in copper, and prices have again worked below 13 cents, but the market on Friday was firmer. It is estimated that surplus stocks are very heavy, and that production may have to be restricted to a greater extent before actual permanent betterment can be expected.

A very favorable feature in the present period of repression is the tendency toward enlargement of our export trade. This is most notable in the grain trade, and not, by the way, entirely on the east coast of the country, because the movement on the north Pacific coast is very large and shows signs of heavy takings of wheat, largely for the United Kingdom. November export trade was of record proportions, and it seems evident that there is a demand of large proportions for this country's products "at a price."

November, a short month with only twenty-four full business days, showed the largest exports of merchandise of any month on record, and financial necessities here also caused the largest imports of gold that ever occurred in any single month. Large takings of our grain and cotton largely explain the excess over preceding months, but gains were shown also in meats, oils and "other exports." Some of the large export of cotton may have been due to shipments of previously delayed cotton, resulting from the later than ordinary movement.

The shoe and leather trades are very quiet, but benefits of early restriction in output are to be seen in the fact that current demand quite fairly takes care of receipts. Heavy sole leather is steady to firm. Rough-leather quotations have been reduced. Grain leather is in better request. More activity is reported in patent leather. Hides are, on the whole, firmer, but tanners refuse to follow the market up. The financial stringency has affected the shoe trade more than leather. Wholesalers are said to be carrying good-sized stocks, as retailers have bought conservatively.

Grain prices moved higher this week, wheat being influenced early by better cables, poor crop reports from the Argentine and better export inquiry, offsetting reports of general snow in the west and of a good covering for winter wheat, and of larger than earlier expected crop-yield statistics in Russia. Corn was strong in sympathy with wheat and on poor reports as to curing and husking, and reports that the present year's crop has less good merchantable corn than any crop for years. Wheat is 5@6 cents higher, with corn up 1@2 cents. Provisions are weak and irregularly lower on large receipts and lower prices for hogs.

Cotton was weak and generally tended lower this week, with declines at one time of 40 to 50 points in futures and of 40 points on spots on large sales, said to be liquidation of important bull interests here, depression at southern markets, especially the southwest, where "Christmas" cotton receipts were said to be heavy, and some rather poor trade reports indicating curtailment of mill operations. On Thursday the National Ginners' report showing 9,323,000 bales ginned was regarded as foreshadowing a bearish government report. The ginning report on Friday, however, showed only 9,281,077 bales ginned, as against 11,112,789 bales last year, and the market advanced 10@12 points on the day, leaving spot prices 20 points below last week, with futures 30 to 40 points off.

Final returns as to building (seventy-nine cities of the United States reporting) show total expenditures for November of $30,236,774, a decrease of 42 per cent. from October, and of 36.6 per cent. from November a year ago. Only twenty-four out of seventy-nine cities show gains over November a year ago.

Bank clearings for the week ending December 19 aggregate $2,193,868,000, a decrease of 3 per cent. from last week and of 36 per cent. from this week last year. Outside of New York exchanges amount to $950,790,000, a fraction of 1 per cent. under last week and a loss of 20 per cent. from the week last year.

Business failures for the week ending December 19 number 300, against 284 last week, 227 in the like week of 1906, 235 in 1905, 249 in 1904 and 243 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending December 19 aggregate 4,861,122 bushels, against 6,185,573 bushels last week, 3,203,824 bushels this week last year and 4,332,832 bushels in 1901. For the twenty-five weeks of the fiscal year the exports are 107,721,755 bushels, against 91,173,494 bushels in 1906-07 and 139,898,760 bushels in 1901-02. Corn exports for the week are 1,021,779 bushels, against 475,824 bushels last week and 1,325,964 bushels in 1906. For the fiscal year to date the exports are 23,161,952 bushels, against 22,170,481 bushels in 1906-07.

IN CANADA.

Holiday trade is now the feature, and retail buying finds the spirit of the season an important stimulus. Wholesalers of holiday goods have done a good business and are now watching the retail distribution. General wholesale business is naturally quiet as the stock-taking season approaches. A large trade has been done in groceries, which are now quiet at wholesale. Building is inactive and materials are quiet. The money situation shows some easing, but there is still great room for improvement. Collections also might be better. Building at five Canadian cities for November was valued at $1,156,117, a decrease of 15.8 per cent. from October, and of 57.7 per cent. from November a year ago. Business failures for the week number 40, as against 50 last week and 26 in this week a year ago. Clearings aggregate $84,167,000, a decrease of 5.8 per cent. from last week and of 12.3 per cent. from this week a year ago.

TRADE REPORTS.

In New York business is quiet in all departments of the dry-goods trade. Trade in silks and dress goods has decreased, but a fair business was transacted in cotton goods, though there is still a tendency to reduce prices. Manufacturers of cotton yarns are holding large stocks and offering concessions to induce sales. December is usually a quiet month in the dry-goods trade, and, considering conditions, business compares favorably with December last year. Collections, however, are backward and many extensions of thirty and sixty days have been asked for and granted. Raw silk is very quiet and prices are weak. Prominent manufacturers of men's furnishings have good early orders on hand, but have been instructed to delay shipment on account of present money stringency. Jobbers of hosiery and knit goods report a general falling off in sales. The general opinion held by those prominent in these lines is that early spring sales will be light. In wholesale cloaks, suits and waists business is rather slow and no improvement is looked for until after the holidays. Collections, however, are steadily improving, and manufacturers are looking forward to an active business when the new year opens. Retail trade in these lines is fairly active. The fur trade continues demoralized, but though insolvencies are of almost daily occurrence there has been no material cutting of prices. Millinery at retail is in a fairly healthy condition. Wholesale grocers report a decided decrease in sales, and business is not equal to that of 1906. Out-of-town buying is restricted, though local dealers are placing orders with more freedom. In the retail trade the usual holiday business is being transacted, and a fair turnover is reported in all lines. Receipts of butter and eggs are moderate and demand is good. The market for poultry is steady and receipts about equal demand. Prices of all grades of live cattle and dressed meats have declined during the week, and the demand for the better grades is good, but seconds are less inquired for. Flour receivers say they can only sell to jobbers on concession in price or to fill up depleted stock for quick delivery. Trade is dull. Manufacturers of confectionery report that Christmas business is not up to the average, but are fairly satisfied with results, as purchases have been more or less restricted by the high price of the raw material. Collections continue rather slow. Conditions in the leather trade still remain quiet. The price of hides, however, has slightly increased, and the feeling prevails that when money is more plentiful business will improve. Some tanners are said to have resumed business. Calf and goat skins continue firm in price in face of poor demand. In the shoe trade manufacturers have had more orders, though as a rule dealers are well stocked. Collections in these lines are fair. In the hardware and cutlery trades there has been a falling off in business for the months of November and December of about 25 per cent., but as a rule business for the first ten months of the year will more than offset that, so that the actual turnover for 1907 will show an increase over 1906. Collections show some improvement. Prices of pig tin, pig iron, spelter, lead and old metal are lower and business in all these lines is very quiet. There has been a little hand-to-mouth buying of copper. Machinery dealers report that some orders are being received and consider that the situation shows some improvement. In the electrical trade, construction work of the largest class has fallen off, and only work of a heavy description, which was financed before the recent monetary disturbance, is being carried out. It is understood that many manufacturers have reduced their working force by 20 to 25 per cent. Collections are said to be good. Tobacco is very quiet and collections are poor. In the cigar trade there was some little improvement, but this was looked on as merely a holiday spurt. Real estate is quiet. Foreclosure sales continue, but seem to offer little attraction to investors or speculators, and in most instances the property offered has been bought in by the plaintiff. Few plans for new buildings have been filed owing to the scarcity of building loans. In the wholesale paper trade business is quiet, and purchases are for immediate wants rather than for stock. An advance in the price of news paper has been determined on, and it will go into effect January 1, 1908.

The following telegrams show trade conditions at the cities mentioned for the week ending December 20:

BOSTON.—Dry-goods commission men and jobbers are quiet; buying is restricted in amount and to lines of goods required for current business. A better feeling prevails as steadiness is shown in primary markets and anticipation of prices breaking badly diminishes. Collections, while generally slow, are rather more satisfactory than was lately feared. In the primary markets for cotton goods, popular lines of ginghams for the spring of 1908 have been opened at prices on a level with those which have been prevailing, and allotments to jobbers have been made by leading manufacturers, limited to 50 per cent. of last year's orders. Holiday trade in dry and fancy goods is very fair. Leading department stores and specialty houses, while doing an active business, are buying sparingly, and are expected to wait and buy later job lots for "mark-down" sales in January and February. Dress-goods jobbing trade has this month been very dull, but values hold firm. Jobbers of woolens for the tailoring trades report business unusually quiet. Men's furnishings at wholesale have fallen off. Dealers in paper are talking more hopefully, but as yet operations are of a conservative character. Some mills are curtailing production somewhat to keep stocks in good shape, but, on the whole, the mills are as well supplied with orders as could be expected. The market holds steady. Only a moderate amount of business is being accomplished in paper stock, and no change is looked for until after the first of the year. The anthracite coal market shows no material change. Bituminous is in slow demand, with large quantities arriving. Retail trade in hard coal is fair. The dullness in

the lumber market continues. In iron and metals the prospect is brighter. In pig iron, stocks at foundries are light, and purchases from necessity must occur soon. Copper and other metals are quiet. Paints are very quiet. Bricks, lime and builders' supplies are in moderate demand. The flour market has an easier tone, and demand continues very moderate. Lower values prevail in pork and pork provisions and in cheaper cuts of beef, but this does not appear to stimulate business.

PROVIDENCE.—The manufacturing jewelry trade is reported a little improved as compared with the past few weeks. Retail business holds fairly good, though holiday trade has received some set backs from inclement weather. There is practically no business being done in building or materials. Collections are slow.

PORTLAND, ME.—Holiday business continues large, and is but little, if any, under last year's. Recent fall of snow helped lumbering operations.

PHILADELPHIA.—Trade continues quiet in textiles and there is little or no new business. Wool is dull, with stocks depleted. There seems to be a tendency on part of buyers to wait till after the holidays, and price inducements seem to have little effect in moving merchandise of any kind. There is apparently a large holiday trade being done by the larger retail dealers, but it is thought doubtful if the volume will equal that of 1906. In certain sections business is apparently quite dull, owing to the closing down of some mills and the reduction of working forces in others. Manufacturers of shirt waists report less cancellations and some improvement in shipments. Cloaks, suits and skirts are mostly dull. The holiday season has had its usual effect upon the retail shoe business, making trade quiet. Manufacturers are inactive and preparing for annual stock-takings. Little business is expected until after New Year's. Some hides and skins are being sold, but demand is very moderate, prices weak and time being asked on settlements. There is general quiet in the leather market, prices ruling steady and practically no demand, but collections are reported generally fair. The flour market is steady but dull, millers holding prices firm and jobbers following suit. Consumers are ordering only what they need. Chemicals and dyestuffs show no change, business being dull. Manufacturers and jobbers of paints are very well satisfied with trade conditions, most houses reporting business good for the time of year. Prices are steady and there is no special complaint about collections. Lumbermen are taking stock and are therefore buying as little as possible. Trade conditions are reported sound, and there are no indications of adverse changes in the near future. Renewals of commercial paper are more numerous than in former years, but collections are fairly good. In tobacco there are only the limited purchases usual at the end of the year, and there is little disposition to place orders for January delivery. Liquor distillers' recent advances in price reduced the amount contracted for of fall '07s and spring '08s to actual wants, eliminating what is usually taken for contingencies or speculation, as old goods can be had as cheap. Wholesale trade for holiday supplies appears to be shading off. Iron and steel business is very light compared with former years, and more furnaces are being put out. There is practically no accumulated stock, so that the production is about on a par with the demand. Prices are fairly firm. The coal market is more brisk, the demand for anthracite being active at strong prices, but bituminous miners and dealers say trade is dull. There is a slight falling off in demand for paper. This appears to prevail among the jobbers rather more than with manufacturers, who continue running to their full capacity, the volume of their business continuing to be fully as good as heretofore. Prices remain stationary and are being maintained both by manufacturers and jobbers. The premium on currency of ⅞ to 1¼ per cent., the Clearing House certificate settlements between banks, the acceptance by banks of foreign checks for collection instead of deposit, and the renewal of a large majority of bank loans, keep a close tension on monetary affairs. It is believed that the situation will not change until after January 1 settlements are made. Sales of commercial paper have increased in volume to interior banks at 7½ to 10 per cent. for best names. Mercantile collections show some improvement.

PITTSBURGH.—Taking into account the large number of suspended orders during the past two months, the mills have old business pretty well worked up, and production of leading plants has been reduced to 40 per cent. or less of capacity, with a probability of still further reduction before the end of the month. There is still a fair amount of new business being received to cover immediate requirements, but very little business is being booked for future delivery. Manufacturers are not exercised at present conditions and confidently expect a revival in demand early in the new year, providing there is a change to normal financial conditions by that time. The pig-iron market remains featureless and quiet, with no transactions reported and nominal prices. Furnace output is being reduced, and by the end of the month there will likely be not 25 per cent. of furnaces in the Pittsburgh district in operation. As furnaces go out of blast coke ovens follow suit, and output is being proportionately decreased. Nominal quotations for spot pig iron at the valley furnaces are as follows: Standard Bessemer, $19; chilled basic, $18; gray forge, $17 50, and No. 2 foundry, $18. Standard Connellsville furnace coke is quoted at $1.75 to $2, and foundry coke, $3, at the ovens Wholesale business in dry goods is better than it was in November, but retailers are reported not buying freely. Lumber is quiet, but collections are better, though notes are offered freely. Hardware is quieter, but collections are better. Inclement weather has helped retail shoe men, but their orders on wholesalers are small, though frequent. Collections are better than in November.

BUFFALO.—In wholesale and jobbing lines trade is fairly active, especially in dry goods, boots and shoes and hardware. Retail dealers in all lines report a good trade, but state that cheaper grades of goods are being purchased. Collections in all lines are reported slow.

BALTIMORE.—Retail holiday trade is only fair, while the usual December quietness prevails in wholesale lines. Cancellations continue to be received by clothing manufacturers, but apply more freely to their higher than to their cheaper grade of goods. Manufacturers in various lines are postponing shipments and in some cases reducing orders for material, owing to conditions in their trades. While some slight improvement in collections is noted in the south, the increase has not been equal to expectations, owing to the continued holding of the cotton crop. Future business in crockery, glassware and woodenware is light and of a filling-in character, and collections are slow. Business in paper at wholesale is quiet, purchasing being mainly for immediate demands only. Harness manufacturers are fairly busy on spring orders. A material reduction in shipments and prices is noted in produce and fruit lines. Coffee jobbers report a falling off in sales and poorer collections. Quiet prevails in all kinds of tobacco. Oils and turpentine continue steady, while spirits are active. Wholesale grocers report a slight improvement in city and country business. A further advance is noted in flour. General collections continue slow, and jobbers' and wholesalers' indebtedness to banks is larger in the aggregate than for some years at this season, owing to the continued extension of time asked for by their customers and general conditions of trade.

CLEVELAND.—Grocery jobbing is fairly active and weather conditions have been more favorable for trade in boots, shoes and rubbers. Business at wholesale is quiet, and with manufacturers orders are light and curtailment is still the general rule. Retail holiday trade in some departments is said to be somewhat better than was looked for two weeks ago, but in the round-up a falling off of from 20 to 25 per cent. from that of normal holiday season is now indicated. While collections in general are slow, the financial situation is better, and the outlook is thought to favor improvement in business with the turn of the year.

CINCINNATI.—Aside from holiday trade, business is exceedingly quiet and more factories are closing until after New Year's. Renewal of maturing paper is apparently the main business of the banks. This is done at 6 per cent. Acceptances of collateral loans and discounts are light.

CHICAGO.—Banks are in better condition for business and show more disposition to put out funds. Many are almost on a currency basis, and others are slowly working toward it. More money has been loaned on grain and provisions at 7 per cent. on time. Fair shipments of currency are being made to the interior grain sections. Local and interior banks are buying commercial paper in fair volume at 7½ to 8 per cent. Local banks have also loaned money in New York this week. The financial situation throughout the west is improving. Savings banks have lost heavily in deposits the past two weeks. Currency brings 1 to 1½ per cent. premium. Collections are slow. Holiday business shows an increase both in wholesale and retail departments, but business is below the normal. Trade in other lines is slower than usual at this season, but the holiday period is always quiet. Prospects are not favorable for any advance in wages of salesmen the coming year. All are in from the road and will stay in for two weeks. Staple dry goods meet with slow sale, and prices are easy. Increased inquiry for pig iron has resulted in fair sales being closed for small lots. Only two merchant furnaces in this district are in blast. Of the twenty-one furnaces operated by the Illinois Steel Company, nine are out of blast. Ten open-hearth furnaces have also shut down. Prices are easy. The Southside Railway has given the Lorain Steel Company a large order for steel rails and an electric company has bought 2,700 tons of structural material. A good proportion of the mill capacity is shut down or running on reduced time. Prices are easy, but no large cuts have been made. Independent wire makers are shading prices and mills are running on short time. Specifications are slow. Bituminous coal miners are reducing their output, and consumption of steam coal has decreased 50 per cent. in three months. Lumber is selling slowly and prices are easy. In other lines trade is light. Holiday business in poultry is fair. Live stock is lower. Cattle receipts decreased, but those of hogs and sheep increased.

ST. LOUIS.—In dry goods, notions, hats and shoes there is quite a lull and many cancellations of spring orders have been received. However, the volume of business for the year compares favorably with last year's. In some lines the opinion prevails that if merchants come out even on next spring's business it will be as much as can be expected, while others look for normal conditions soon after January 1. While trade is of good volume, it is not up to expectations in all lines. Traveling men are in for the holidays and are preparing their samples for spring trips. Seasonable weather and the approach of Christmas have stimulated retail trade, especially among department stores, but buying is along conservative lines. Lumber is extremely quiet, and there is practically no demand for building material. Trade in groceries and drugs appears to be of good volume. In some sections collections show a falling off, while in others payments are good. Demand for money has increased, but rates remain firm at 7 to 8 per cent. Export trade in flour shows a falling off, but, viewing conditions as a whole, prospects appear bright.

KANSAS CITY.—Cold weather has had a stimulating effect on retail business. Holiday trade, however, is not up to expectations, and with many large merchants it is considerably below last year's. Inventory is under way in large houses. Conditions in the country districts are favorable, and wholesalers in leading lines are preparing for a good spring business. Collections continue backward. There is a decided improvement in local banking circles. Currency can be obtained when desired, and good loans are being made with less difficulty at 7 to 8 per cent.

MILWAUKEE.—Favorable weather and the holiday season have stimulated jobbing and retail trade. Collections are improving. The financial situation is clearing and currency is gradually replacing scrip.

SIOUX CITY.—The banking situation has improved and cashiers' checks are being retired gradually. Currency payments are made more freely. Some small loans are being made at 8 per cent. Jobbers report fair business but slow collections. Retail trade has improved, but it is not up to the normal for the holidays. The weather is colder. Receipts of live stock and grain are still light, though improved.

DAVENPORT.—Trade continues very quiet. Collections are slow. Fair weather hampers business in some lines.

ST. PAUL.—Trade is quiet, nearly all salesmen being off the road. The weather has been too mild for seasonable business, and there has been practically no demand for rubber goods. Collections are keeping up fairly well and a little more money has been received than last December, but on a percentage basis collections are not so good as then. Chronically slow merchants are making no reduction of their accounts. The non-circulation of currency finds them in a hopeless condition. Retailers are doing about as well as last year.

MINNEAPOLIS.—Holiday trade is in full swing and is of good volume, though somewhat less than last year's. The weather is fine for shopping, but a good drop in temperature would greatly stimulate sales of seasonable goods and help all lines. Jobbing is quiet, orders being almost entirely for staples, with preparations making for inventory. Receipts of grain are keeping up well. Country collections are very fair. Banks are in an easy condition and able to meet all demands made by customers. Flour trade is quiet and shipments curtailed.

OMAHA.—While holiday trade is good, it will not equal last year's. Jobbers report future orders light and only a fair volume of filling-in orders. Weather conditions have not been favorable to general trade and country merchants continue to buy for immediate needs. The financial situation appears much more favorable. Grain is being purchased freely, and money is considerably easier. Collections, however, are only fair.

LINCOLN.—Jobbers report satisfactory trade for the season. Considerable improvement is noted in collections. Retailers say holiday trade is about equal to that of last year.

RICHMOND.—The encouraging feature this week is the increase in sales by retailers, due to the approach of the holiday season. All lines share in the activity, and the season, while a trifle later than usual, will be favorable. Dealers in produce report a marked improvement in conditions and a considerable increase in business. In hardware and mill supplies dullness prevails, as usual at this period, but in sporting goods sales are of satisfactory volume. Spring orders for shoes, hats and clothing have been received in fair amount, but immediate business is only fair. Offerings of tobacco are greater than last week, prices are good and the market shows signs of increasing strength. Manufacturers of vinegar and cider have had a favorable season. Financial conditions generally continue to improve. Collections, while backward in some lines, maintain the relative improvement of the past two or three weeks.

CHARLESTON.—Holiday trade, while good, is not so active as last year. Wholesalers and jobbers report trade quiet. A slight improvement is noted in collections.

SAVANNAH.—Retail holiday trade is very active. Collections continue poor. The currency situation is easing. Dealings in lumber and naval stores are unsatisfactory. Cotton is moving freely.

AUGUSTA.—Wholesale trade is very quiet. Retail shows some slight improvement. Collections are only fair.

ATLANTA.—Holiday trade continues brisk among retailers, and it now appears that sales of this nature will equal, if not exceed, last year's. Wholesalers are holding up orders until after the holidays, and a disposition to await further developments in financial affairs is manifested. Country merchants complain that they cannot collect accounts due, as farmers are holding cotton.

BIRMINGHAM.—No. 2 southern foundry iron is selling at $14 to $14.50 per ton. Inquiries are not as brisk. After the holidays a revival of business in all lines is looked for. Retailers report the usual Christmas trading. Collections continue fairly good.

MOBILE.—Jobbers are still very conservative in extending credit, owing principally to the unprecedented condition of the lumber market, which is the worst in the history of this section. Collections are bad and a feeling of uncertainty exists.

MONTGOMERY.—Holiday trade shows some improvement, but is not so good as last year. Collections are poor.

CHATTANOOGA.—Holiday trade is good. Wholesalers report satisfactory orders. Manufacturing is dull. Sufficient money is in evidence to sustain all lines of business. Collections are fair. Weather conditions are fair. Building is active.

MEMPHIS.—Wholesale business is about over. Retail holiday trade is good. Collections are slow.

LITTLE ROCK.—Wholesale business is at a standstill, but holiday retail trade is fairly good, although not equal to that of former years. Cotton is moving a little more freely and collections are moderately good.

NEW ORLEANS.—Holiday trade is satisfactory, but not as heavy as last year. Cold weather for several weeks has enabled merchants to move winter goods, and after January 1 stocks will be lower than for several years. Jobbers are doing little, and collections are very unsatisfactory. Lumber mills are booking some business, but will not start up for some weeks.

FORT WORTH.—Holiday shopping is in full swing, and merchants as a rule have no complaints. Reduction sales in all lines have been on for some days, the tendency being to carry over as little stock as possible. Collections by jobbers show some improvement. Building operations are quiet. Banks are not loaning much money, but are apparently taking care of those whose re-

quirements are for strictly legitimate business needs.

DALLAS.—Wholesalers are making ready to take stock and are busy trying to get in their collections. Retail trade is fairly good, though much less than last season. Collections for December are coming in fairly well and show a marked improvement over November. Building operations are nearly at a standstill.

SAN FRANCISCO.—Banks have requested the discontinuance of holidays, beginning to-day. Business is again almost normal, although certificates are still in circulation. Collections are difficult to make.

SEATTLE.—Wholesalers and dealers are optimistic. General conditions are somewhat improved. Holiday trade in all lines is good. Jobbers report some orders being received for future delivery. Collections are improving. Banks are gradually resuming specie payments.

SPOKANE.—Trade is assuming a better tone. Retailers report business fair. Wholesalers are busy. Collections are fair.

TACOMA.—Holiday business is fairly good. Some Clearing House certificates are being retired, and the situation shows some improvement. Lumber continues quiet, with some mills closing down because of lack of orders. Wheat is moving freely Collections are slow.

PORTLAND, ORE.—The present movement of wheat breaks all records, the terminal company here handling about 120 cars daily. The number of vessels under charter is also of record proportions. Holiday trade is good. Jobbers report quiet conditions, with fair collections.

TORONTO.—Wholesalers express themselves well satisfied with holiday trade. The retail rush is now in full swing and all branches of this trade report favorably. In some other lines there has been quite a falling off in the volume of business doing. The wholesale movement in men's clothing is light, to some extent owing to the fact that retailers, hard pressed for money, have been cutting prices and taking all means to reduce stocks. Business in furs, too, has been light. Seasonable weather is helping the movement in dry goods, although it is hoped there will be considerable improvement in this regard about the middle of next month. Values of dry goods are generally steady to firm. Cotton prices hold firm in tone. The building trades continue quiet and there is a resultant lack of demand for hardware supplies. Hardware prices are generally steady. The outlook for spring trade is considered good. The movement in groceries is now on the quiet side, and it will naturally continue so for a week or two. The movement of holiday goods has been large. Wholesalers generally report satisfactorily as to collections. There is a good tone to country trade. Good sleighing has had considerable effect. Receipts of produce have increased in most lines, but prices still hold firm. The hide market is still weak and unsettled and expected to decline further. Tallow is weak and unsettled, and wool is unchanged at the recent decline.

MONTREAL.—Holiday retail trade is now the feature, and the general feeling is that it is quite up to expectations. General wholesale trade is moderately active, colder weather having helped the sorting trade in winter lines. There is, however, a quiet tone noticeable in other goods. Collections are fair, and the outlook favors considerable improvement in this regard. In dry goods there has been an excellent demand for linens, despite the high prices ruling. Cotton values here hold firm. Groceries are inclined to be quiet. The business done in holiday goods compares well with that of former years. Teas are firm. Sugar is steady at the recent decline. Demand for metals and building materials is quiet. Prices are about steady. It is stated that Canadian railroads will be in the market for rolling stock early in the new year, a fact that will do much to help general trade here. Money is gradually working easier, but the change in the situation during the past week has been very slight. Country trade has been brisk during the past week or two. Receipts of produce continue light. Butter prices have an easier tendency, although stocks here are light, as are also receipts. Demand for cheese has improved and prices are higher. November make is reported out of the market. Hides are easy, with calfskins lower.

VANCOUVER-VICTORIA.—Wholesale trade here has a quiet tone. The trade in holiday goods has been heavy. The money situation is reported to be easing somewhat and collections are generally good. The number of unemployed is still large. An indication of healthy trade conditions is found in a more pronounced increase in bank clearings and awakening activity in the building trade. Money is still somewhat scarce, but further improvement is looked for.

WINNIPEG.—As the season advances trade here takes on a more cheerful tone. Holiday demand is helping retailers, and stocks are reported to be moving well. Sorting orders for winter dry goods are increasing. Values hold firm. Shipment of grain up to the close of navigation amounted to 20,000,000 bushels, as against about 25,000,000 last year. The grading of wheat has continued surprisingly good. Collections are fair. Land speculation is still practically non-existent, owing to the shortage of money.

FINANCIAL.

The Week's Financial History.

The synopsis here inserted of events of the week having a direct bearing on the financial situation is continued as forming a convenient chronological record which may be found of interest in the future:

December 14.—Stock market very dull; prices lower. Bank statement better than expected; cash increased $4,100,000; loans decreased $11,400,000; the ratio of reserve being 21.24, against 20.70 on December 7; deficit $40,100,000, a reduction of $6,100,000 for the week. Surplus copper supply estimated 400,000,000 pounds. Official reports show heavy decreases in October and November imports of diamonds.

December 16.—Stocks dull; prices weak after irregular movement and temporary advance at the opening; selling of copper shares a feature. Bankers get $5,300,000 in gold from London, and engage $2,500,000 in that market at an advance of 3 farthings over preceding quotation. Foreign exchange firmer here, easier at Berlin, while London displays concern over our gold withdrawals. Call money quoted at 14 per cent. and 6 per cent., averaging 10 per cent. Time money scarce; few loans made; rates 10 to 12 per cent. for short periods and 8 per cent. for four months and longer. Out-of-town banks buy commercial paper in small lots, but demand here practically nil, with rates ranging from 8 to 10 per cent. Currency premium 1 per cent. Comptroller of the Currency issues report advocating establishment Central Federal Bank, and declares that there has been more of a panic among the banks than among the public. Directors of Mercantile National Bank announce the institution will not be merged just yet, and also assert the bank is in a strong position. Speakers at National Civic Federation meeting discuss need of currency changes and adopt elastic currency resolution. Bill introduced in House of Representatives providing for appointment of banking and currency commission to hold public hearings at various points, and report thereon not later than December 1, 1908. Bill also introduced to bar future trading in cotton and cereals. Big fleet sails for Pacific.

December 17.—Stock market comparatively quiet; prices react after rally in the afternoon, closing irregular. Foreign exchange higher, ¼ per cent. over Monday. Call money up 2 per cent., highest being 16, lowest 6, most the day's business averaging 12 per cent. Time money quiet; very little offering, with rates practically unchanged. Currency premium weak, off ⅜ per cent.; ruling quotation about ⅝ per cent.; demand light. Lake Shore, also Michigan Central, declare extra dividends of 2 per cent. respectively. Hepburn report on the subject of New York state's banking institutions suggest plan to prevent establishment of a chain of banks by the hypothecation of the stock of the first bank controlled by speculative syndicates. The report also recommends more power for state superintendent, declares for increased capital of branch banks and inveighs against secret loans. The commission is divided on the percentage of reserves to be held by trust companies, although the majority hold that trust companies should carry reserves of 15 per cent. Small state bank at Durango, Col., closes. Permanent receiver appointed for the National Bank of Commerce of Kansas City, Mo. Referee appointed to pass on the valuation of the assets of the Borough Bank of Brooklyn. Large remittances of Christmas gifts in the form of foreign money orders announced. Foreign trade statement shows November gold importations $63,000,000, eclipsing all monthly records—$21,000,000 over the panic month of August, 1893. Exports of merchandise, $204,444,000, heaviest on record; 2.3 per cent. above the total for December, 1905, hitherto the record month. Utah Consolidated Mining Company reduces dividend one-half.

December 18.—Stock market opened dull, somewhat heavy, but became active and higher in the afternoon on announcement of maintained or increased dividends. Currency premium ruled around 1 per cent. Money on call somewhat easier at times, being as low as 3 per cent. and as high as 12 per cent., closing at the first named figure, averaging about 12 per cent. Time money inactive; rates from 8 to 12 per cent. on short periods and 8 per cent. for longer time Sterling exchange lower, and $700,000 in gold taken by Irving National Exchange Bank in London. Jewelers' National Bank, North Attleboro, Mass, closed, following the death of its cashier. New York Central & Hudson River declares regular quarterly dividend 1½ per cent. New York Air Brake Company deferred payment of its quarterly dividend of 2 per cent., which has been paid since 1899. Directors of the Pennsylvania Company, operating lines west of Pittsburgh & Erie, declared a semi-annual dividend of 4 per cent., putting the stock on a 7 per cent. basis. The last semi-annual dividend in June was 3 per cent. Lehigh Valley directors declared the regular semi-annual dividend of 2 per cent. and an extra dividend of 1 per cent. on the common stock, as well as the usual half-yearly payment of 5 per cent. on the preferred stock. The Pittsburgh, Cincinnati, Chicago & St. Louis Railway declared the usual semi-annual dividend of 2 per cent. on its common stock, also 2½ per cent. on its preferred. The Reading Company declared the regular semi-annual dividend of 2 per cent. on the common stock. Deposit account of $10,174 in the Knickerbocker Trust Company offered at auction and bid in by owner for 66 cents on the dollar. Announced that the Pacific fleet, which sailed Monday, will make journey around the world, returning via Suez canal. Fifteen million dollars New York City 6 per cent. bonds offered by bankers at prices ranging from 100½ and interest to 102 and interest. Private banks in Indiana closed by state authorities. Bank of Denmark advanced discount rate to 7 per cent. Resumptions of iron and steel plants, Pittsburgh district, reported.

December 19.—Stock market very quiet, trading of professional character, prices closing slightly higher after considerable irregularity. Call money, 7½ to 12 per cent., averaging 8½ per cent. Time money dull; 8 to 12 per cent. for short periods; 8 per cent. for four, five and six months. Local demand for commercial paper unimproved and out-of-town purchases meager. Currency premium higher, 1¼ per cent. on demand from out-of-town banks and for pay-roll requirements, though it had been down to ⅝ per cent. Bank of England loses cash, but ratio of reserve—45.90 per cent.—is the highest reached this date in December since 1898. Sterling exchange up ½ cent., ruling firm at 4.86½, also higher on continent. Silver advanced 1 1-16 pence in London on short covering. Money easier in Chicago; reported several banks there have loaned several million dollars in New York past few days. Injunction proceedings in the matter of the Illinois Central Railroad continued until March, attorneys agreeing that the annual meeting be held on March 2, 1908. Accountant's report on the Westinghouse Electric & Manufacturing affairs shows a surplus of $11,494,002. Pittsburgh, Cincinnati, Chicago & St. Louis Railroad Company applies to New York Stock Exchange to list $3,868,000 additional stock, most of it to be used for minority stock of Chartiers Railway. Guaranty Trust Company engages $500,000 gold for import. Small Cleveland bank makes assignment. W. B. Thomas to become president of American Sugar Refining Company on January 8, 1908. Grain markets dull, but May option higher, though Liverpool was lower. Corn off on profit-taking. Cotton off on realizing.

December 20.—Stock market advances sharply on small transactions, due to expectations of favorable bank statement and to call for state bank statement as of December 19. Gold engagements, $800,000; total to date, $105,350,000, of which $87,530,000 has arrived. Call money, 16@8 per cent.; prevailing rate, 12 per cent. Time, scarce; at 8@12 for ninety days. Mercantile paper in light demand; rates, 8@10 per cent. Seat on New York Stock Exchange sells at $65,000, against $63,000 the preceding sale, and $51,500, lowest of year, a few weeks ago. Referee Masten's 80-cent gas decision sustained by Judge Hough. De Beers (Diamond) Company passes dividend on deferred stock. Currency premium, ½ to 1 per cent. Money easing at Chicago. One-third of Clearing House certificates issued at that city retired. Copper metal on Exchange advanced ⅛@¼ cent. Foreign exchange strong. Wheat continues advance. Cotton firmer, up 10 points.

Money Market.

Reports have been heard during the week tha. some money from western institutions has been put out in the New York loan market. Such amounts must have been small and had no real effect on the position in regard to time loans, which are still practically unobtainable. Nominally the quotations for this kind of accommodation continued to be 12@10 per cent. for thirty to sixty days, but such few actual transactions as were effected were matters of special arrangement between the lenders and borrowers. In banking circles there is a natural disposition to adopt a strongly conservative attitude until after January 1, and no prospect of any immediate relaxation in this respect can be detected. Commercial paper is still inactive, though dealers are quoted as finding some scattered buying on the part of nearby interior banks, based on limited amounts of choice paper. Call money has been quite firm, with the renewal rates ranging between 8½ to 12 per cent., though toward the end there was a slightly weaker tone.

New York Banks.

While the Clearing House statement of Saturday, the 14th instant, showed a further contraction of $11,367,700 in loans and a lessening of the deficit in reserves of $6,109,175 for the week which it covered, the feature of the averages was the increase of $4,112,800 in the cash items. This result was the more striking because the actual known movements of money indicated a decrease of some $7,000,000 in that respect. The most probable explanation would seem to be that hoarded money was being returned to the banks, though it was also suggested that the renewed high interest rates at New York had served as an inducement for the putting out of some money in that market by interior institutions. The decrease in deposits of $7,985,500 was in accordance with the above changes and reduced the amount of the reserve

required, so that the deficit decreased by the amount mentioned above. The figures of the statement compare as follows with those of the preceding week:

	Dec. 14	Dec. 7	Changes
Loans	$1,175,027,900	$1,186,305,600	D. $11,357,700

Foreign Exchange.

At the beginning of the week the dealings in foreign exchange were on a limited scale, but the tone of the market was, on the whole, firm for both cable transfers and demand bills, while the offerings of commercial bills were by no means large. As the week advanced the inquiry for remittances in connection with payments abroad, due on January 1, became decidedly brisk and caused a further and rather sharp advance in the quotations for bankers' bills. The posted rates were generally advanced on Tuesday by ½ point, making the nominal figures 4 81@4.87, while demand sterling rose from 4.86 to as high as 4.86½ on Thursday, when the firmness of the market showed a considerable increase. Notwithstanding the position of exchange there were additional gold engagements made in London for American bankers, amounting to about $1,500,000, which raises the total since the movement began to $106,000,000, of which some $80,000,000 has already arrived. The Bank of England return for the week was somewhat disappointing, showing, as it did, decreases in gold and reserve, but this was to be expected at this season. On Friday the market was again strong, the posted rates being marked up to 4.81½@4.87½, while actual demand sterling was quoted at around 4.86.70.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Dec. 14	Dec. 16	Dec. 17	Dec. 18	Dec. 19	Dec. 20
4.80½ @ 4.86½	4.80½ @ 4.86½	4.81 @ 4.87	4.81 @ 4.87	4.81 @ 4.87	4.81½ @ 4.87½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.85.50 @ 4.85.75	4.85.70 @ 4.85.95	4.86.00 @ 4.86.15	4.86.00 @ 4.86.10	4.86.20 @ 4.86.50	4.86.50 @ 4.86.70

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.79.65 @ 4.79.80	4.80.10 @ 4.80.30	4.80.25 @ 4.80.55	4.80.25 @ 4.80.40	4.80.15 @ 4.80.20	4.80.35 @ 4.80.50

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88.40@4.88.50; commercial bills, 4.79¼@4.81; francs, 5.23⅛@5.18⅛; reichsmarks, 93⅜@94¾.

The Bank of England's discount rate is unchanged at 7 per cent. This week's statement of the bank showed a decrease of £1,086,954 in gold, and its proportion of reserve fell from 46.95 per cent. to 45.90 per cent. The showing was otherwise unimportant. In the London open market call money is 3½@4 per cent. and discount 5⅞@6 per cent. The Bank of France reported this week an increase of 1,525,000 francs in gold. Its rate is still 4 per cent., the Paris market quotation for discount being 4 3-16 per cent. and the market 7¼ per cent.

New York Stock Exchange Transactions.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending December 19 shows an aggregate of $2,193,868,000, as against $2,271,282,000 last week and $3,593,517,000 in the corresponding week last year. Canadian clearings for the week aggregate $84,167,000, as against $89,374,000 last week and $96,077,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	December 19	Inc.	Dec.	December 12
New York	$1,243,078,000	....	48.2	$1,319,733,000
Chicago	190,775,000	....	20.3	191,385,000

New York Securities Market.

Activity at the Stock Exchange this week has been on a very restricted scale and represented little beyond the varying attitude of professional traders, while the governing factor seemed to be the firmness of money and the continued practical inability of Wall street to borrow on time for speculative purposes. The rather favorable bank statement of last Saturday tended to create a little improvement of sentiment, but this was lost in the early days of the week, when the market tended to sell off in sympathy with the copper stocks, Sugar and other industrials, such issues being apparently subjected to more or less bearish pressure. By Tuesday afternoon a measurable rally set in under the lead of Reading, which has been the most active feature of the week. The improvement was also helped by the declaration of extra dividends of 2 per cent. each by the Lake Shore and the Michigan Central roads, which was at once construed as meaning that the New York Central dividend would not be changed. A fairly large short interest had grown up in the latter stock on the theory that the quarterly dividend would have to be cut, and accordingly, when the regular 1½ per cent. was declared, there was more or less covering and a corresponding improvement in the price of Central, notwithstanding the fact that the earnings statements left no doubt that it was the subsidiary concerns and not the New York Central itself which had provided the funds for the dividend. Notwithstanding the continuance of high rates for call money, and the feeling which prevails in the street that banking influences are expected to check any development of speculation on an enlarged scale until after the January settlements and payments are out of the way, the market continued strong, with covering of shorts, until Thursday, when the temper became more reactionary. Friday's trading, however, again developed advancing tendencies in the active part of the list, the Harriman stocks, headed by Union Pacific, assuming more prominence.

Beyond the developments in connection with the Vanderbilt properties, there was little in the record of the week's events to seriously affect the market. The indications of continued but slow progress toward the reëstablishment of normal financial conditions throughout the country are regarded with satisfaction, but this is offset by recognition of the narrow position of the local money market and the unwillingness of banks to finance speculative operations. More or less attention continues to be given to the dividend prospects of various companies, the delay in taking action in the case of Missouri Pacific, the postponement of the dividend declaration on New York Air Brake, and the frank avowal by the officials of the Distilling Company that its dividend would have to be reduced in order to conserve the company's cash, all being regarded as samples of what the market may expect in a variety of other instances.

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*Dec. 13, 1907*	*Dec. 6, 1907*	*Dec. 14, 1906*
American	3,294,621	3,171,279	3,848,499
Other kinds	869,876	851,876	890,000
Total	4,164,497	4,023,155	4,738,499

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Dec. 13, 1907	*Dec. 6, 1907*	*Dec. 14, 1906*
Great Britain and continent	2,224,000	2,233,000	2,206,000
Egypt	209,000	195,000	204,000
India	320,000	310,000	358,000
United States	1,411,000	1,285,000	1,970,000
Total	4,164,000	4,023,000	4,738,000

Following will be found the movement of cotton into sight for the week and season, as compiled by the New York Cotton Exchange:

	This week	*Last week*	*Last year*
Week	505,629	472,959	511,635
Season	5,762,895	5,257,267	7,371,992

Boston Shoe and Leather Market.

The leather market is still reporting an unseasonably quiet month, and no improvement is anticipated until after the holidays. Tanners have been curtailing product for months, and stocks coming into the market are not accumulating to any extent. There is sufficient hand-to-mouth business to take care of receipts. In the face of high cost of hides and the increasing stringency of the money market early in the year, this was the only course the tanners could take, and no trade is apparently in better position to withstand a readjustment of prices than the leather trade will be when the finished product begins to conform to the new prices on raw stock. Sales of all kinds of leather are in moderate lots, but aggregate a fair volume for the season. Hemlock is not in sufficient supply to cause any price-cutting, and some grades of union backs are sold ahead. Heavy oak backs are also scarce. Rough leather is very quiet and

quotations have been reduced. Grain leathers are in better request both from domestic and foreign houses. Finished splits are about holding their own. Finished calfskins in heavy and light weights are selling well. Patent leathers are becoming more active, and some good contracts have been placed, involving 5,000 to 10,000 sides. Hides are firmer in tone, but tanners refuse to pay the increase. Ohio buffs are quoted at 7½ to 7¾ cents. The shoe trade has suffered more from the financial stringency than the leather trade. Well-posted authorities have information that the wholesalers, on the average, are carrying from 15 to 20 per cent. more footwear in their warehouses than they expected to have at this time of the year. In spite of extremely conservative buying, their sales have been to people who were even more conservative, and their calculations were not low enough. Wholesalers are asking manufacturers to postpone deliveries, and other indications appear to confirm the accuracy of this analysis of the situation. The busy factories at the present time are, as a rule, those that sell through their own stores or direct to the retail trade. Following is the *Shoe and Leather Reporter's* figures: Last week, 72,096 cases; preceding week, 67,338; last year, 90,383; total for 1907, 4,516,474; total for 1906, 4,835,658; decrease, 319,184.

Boston Wool Market.

Several factors have contributed to make the past week in the market a very quiet one. Many mills are taking stock or preparing to do so; nearly all the manufacturers are getting ready for the usual shutdown over the Christmas holidays, and the heavy sales of the previous week appear to have satisfied the demand for the time being. The fact that the heavy-weight goods season will be from four to six weeks late on account of the postponement of the opening until after the first of the year has also added to the forces restricting the movement of wool. Still there is a small amount of business doing and prices are being held very steady, holders of all grades of domestic wools being very firm in their ideas on account of the removal of competition from foreign grades by reason of the extremely small purchases abroad for American manufacturers. Stocks are smaller than last year, both of foreign and domestic grades, and sample bags are going out freely. Several hundred thousand pounds of fine and fine medium territories were sold during the week, and there was a fair movement in other grades, though the aggregate was about an average for the season. The new Australian wools, both from the London sales and direct from Australia, are now arriving, early-bought 64s to 70s being held at 43 cents in the grease, or about 85 cents cleaned, but some old wool is offering below this figure. There is very little demand for foreign wools, but holders are firm on account of the limited supply.

SOME RARE KINDS OF UNITED STATES MONEY.

"Among the United States issues of paper money first came the demand notes, which gave rise to the name of greenbacks," says the Minneapolis *Tribune*. "Congress on July 17, 1861, authorized an issue of paper money of the denominations of $5, $10 and $20, of which $60,030,000 went at once into circulation. These notes were made payable in New York, Philadelphia, Boston, Cincinnati and St. Louis. Demand notes were issued for a period of less than eight months, for by act of Congress of February 25, 1862, a new issue, the first of the legal tender notes, was authorized in denominations of $5, $10, $20, $50, $100, $500 and $1,000. Fifty million dollars of the new notes were used to take up the demand notes, and they soon disappeared from circulation. The records now show that only a little more than $50,000 of these notes remain to be redeemed, and it is believed that not more than $1,000 worth are still in existence. All the denominations are extremely scarce, particularly the $10 and $20 notes. They are held at a premium by paper money collectors, especially when in fine condition. There were at least fifteen varieties, counting the bills made payable in the different cities, and some of these bills rank in rarity with the rarest of the postage stamps.

"The first issue of legal tender notes is scarce, but not so rare as some more recent issues. These notes had the same obverse as the demand notes, but bore a different reverse. One variety showed that the bill could be convertible into United States 6 per cent. twenty-year bonds, while the other variety was receivable in payment of all dues, public and private, except customs and interest on the public debt. The second issue of legal tender notes was authorized by the act of July 11, 1862, and consisted of two denominations, $1 and $2, the first United States bills of small denominations. This series indicated that the issue of $3 bills was contemplated. In the center of the obverse of the $1 note is a circle of lathe work in green. Within this, with the figures ranged one above the other, are '1,' '2' and '3.' But the $3 bill never made its appearance. A bill of this denomination was engraved and proofs taken, but the Treasury Department was advised that such a denomination was not needed. These bills are not so scarce, as other issues at the time of their first appearance were regarded as curiosities, and many persons laid specimens away, and they exist in perfectly crisp condition.

"The third issue of legal tenders in 1863 included denominations of $5, $10, $20, $50, $100, $500 and $1,000, while the fourth of 1869 embraced the same denominations, with the addition of the $1, $2 and $10,000 bills. Of this series the $1 bill is regarded as the handsomest printed up to that time. Only one legal tender bill of the denomination of $10,000 was ever used, and that specimen is now in the Treasury Department at Washington. All of the fourth issue of notes of 1869 are rare. Of these bills and the subsequent $1 and $2 issues, those which are scarcest are the 1869 reissues, 1875 and 1886, the silver notes bearing the portrait of Martha Washington. The scarcity of such bills is indicated by the fact that men who handle millions of dollars in paper money every year, and who are on the lookout for desirable specimens of these rarities, rarely come across one of them. Other bills, scarce when in fine condition, are those bearing the portraits of Hancock and Windom, and the coin notes of 1890, which allow the Secretary of the Treasury, in his discretion, to redeem the notes in gold or silver, and which show the portraits of Stanton and McPherson. Collectors are glad to get notes of low numbers, and place great store by these. In one of the big collections are shown several notes Nos. 1 and 2, and quite a number under 50."

A GREAT LACE INDUSTRY.

In a description of the Nottingham lace industry, Consul F. W. Mahin estimates the total annual output at about $25,000,000. The United States is the largest individual buyer, taking a quarter of the total; Germany, France and the British colonies rank next, and every other country in the world takes some share of this British product. Concerning its manufacture, the consul writes:

"Nottingham is preëminent in the production of machine lace, for several reasons: First, the invention of the stocking frame in this country; second, the town was always noted for its mechanical skill, and proverb runs that 'the little smith of Nottingham can do the work no other man can'; third, the inventors and improvers of lace machinery were Nottingham men; fourth, the damp climate. Cotton-cloth making was first started in Nottingham, but was moved to Lancashire because the climate was not damp enough here, though right for lace making.

"The machines now in use in the Nottingham lace industry are the Levers, lace curtain, plain net (all based on Heathcoat's invention, with Levers's improvements), and warp lace (an adaptation of the knitting machine). A German machine for making embroidered net and lace is used to a limited extent, and also the Barmen machine, of mixed German and French origin, producing a clever imitation of handmade lace. The product of the machine, being in a crude brown state, must be bleached and otherwise treated to render it fit for the consumer. These various processes closely followed in development the making of lace. Samuel Hall, of Nottingham, patented certain devices during several years, beginning with 1817, which are essentially those used to-day.

"About 6,000 people are employed in the lace factories of Nottingham and immediate vicinity; in the bleaching and finishing processes, distinct from the factory work, probably 20,000 more are employed—the number being a variable quantity, dependent upon the state of the trade. The number directly dependent on the lace industry is estimated at 50,000, and the number indirectly dependent thereon is probably 125,000—half the town's population. At least 600 firms are engaged in the industry in this city in making, finishing or marketing lace. A few combine the three, most of them both finish and sell, while a comparative few deal in the finished article only. The number of firms weaving lace is 135. The annual output of the largest factory is worth about $1,000,000, and of an average factory about $250,000.

"Many of the lace factories are in the city limits, but the present tendency is to place new ones in adjacent villages, where land and labor are cheaper. The finishing processes, however, are confined to the city, on account of the better facilities and because trade is expedited by bunching close together the firms engaged therein. As a rule, lace factories are not occupied by one firm alone, but are let somewhat like tenement houses. Thus there may be one firm or more on each floor, or one firm may have two or three floors. The rent covers all tenement expenses except lighting and insurance. Wages of factory hands range from $4 to $20 a week, depending on the skill or knowledge required."

Remington Billing Typewriter

What It Does

It writes your bills with double the speed of the pen.

It writes bill and charge sheet at one writing—no more need for separate charge entries.

It writes at the same time any additional charge or order copies that your system may require.

It adapts itself perfectly to your system or the needs of any business.

It improves system, insures against errors—makes short cuts which were impossible under former methods.

It extends the field of the typewriter to form and tabular work of every kind and description and always with an immense saving of time, labor and expense.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, DECEMBER 28, 1907.

In spite of the postponements of dividend payments upon the stocks of various railroad and industrial corporations, and of the decisions of various managements to give their stockholders scrip or stock instead of cash, the amount to be disbursed at the leading financial centers of the country on January 1, on account of interest and dividends, makes a very large total. According to the closest computations about $185,000,000 will change hands on such accounts. This sum is some $2,000,000 larger than the exceedingly large interest and dividend payments of a twelvemonth ago. To finance disbursements of such an enormous character has, of course, placed a heavy strain upon the New York money market, where the great bulk of such payments has to be arranged. It is accordingly not at all unnatural that the money market at the metropolis during the present week has shown additional firmness. One of the specially encouraging signs, however, is that interior institutions are inquiring about the purchase of commercial paper when the turn of the year has arrived, and their own apprehensions in connection with the general monetary situation will be relieved.

It is said that the first bill to be considered by the House Committee on Appropriations will be a deficiency bill providing about $8,000,000 to enable the Isthmian Canal Commission to continue the work on the Panama canal without interruption or delay until the end of the current fiscal year. The reason for making this provision has already been set forth. The general appropriation for the current year was made upon the basis of estimates furnished by the last preceding chief engineer, and called for about $28,000,000. Since the new administration came in under Colonel Goethals, however, progress in the work of digging the canal has been accelerated, and it is now found that unless additional funds are provided the work will have to be stopped. The appropriation asked for should be granted. The time for delay in the prosecution of the work on the canal has passed; it should now be pressed with all speed.

While but eleven months' figures are yet available, the foreign trade record for 1907 so far exceeds that of any corresponding period of earlier years as to justify the statement that the total of both imports and exports will be far larger than in any preceding year in the history of our commerce. For the first time the monthly export record in 1907 crossed the two-hundred-million line, the total for November, 1907, being $204,444,860, while the import record of $133,110,170, made in March, was the largest total of importations in any single month in the history of our commerce. The figures at hand, according to the Bureau of Statistics, justify the estimate that the imports of the full year will exceed $1,400,000,000, and that the exports will probably exceed $1,900,000,000. If to these we add the trade with the non-contiguous territories of the United States, the value of the merchandise entering the ports of the continental United States would aggregate nearly $1,500,000,000, and the merchandise leaving its ports would aggregate nearly $2,000,000,000.

The growth in the foreign commerce occurred chiefly in manufacturers' materials and manufactures. In imports crude materials for use in manufacturing showed for the ten months for which figures are available an increase of about $40,000,000 over the corresponding period of last year, and manufactures for further use in manufacturing showed an increase of about $29,000,000, while manufactures ready for consumption showed an increase for the period named of $46,000,000. On the export side raw materials for use in manufacturing showed an increase of $48,000,000, manufactures for further use in manufacturing an increase of $13,000,000, and manufactures ready for consumption an increase of $29,000,000. In foodstuffs there was a slight increase in the importations but a decrease in exportations, as measured by values. Foodstuffs in a crude condition imported showed an increase of about $20,000,000, and foodstuffs partly or wholly manufactured an increase of $17,000,000. On the export side foodstuffs in a crude condition showed a reduction of about $500,000, and foodstuffs partly or wholly manufactured a reduction of about $3,000,000.

In his decision on the New York 80-cent gas law, the rendering of which was noted briefly last week, Judge Hough of the United States Circuit Court at New York held that the law was unconstitutional as being practically confiscatory of the property of the Consolidated Gas Company, and thus in violation of the Fourteenth Amendment to the Federal Constitution. The court took the ground that the franchises held by the company must be regarded as property productive and inherently valuable, and included them among the assets of the company, though reducing the estimate of value $8,000,000 below that fixed by Mr. Masten, as referee or master. On the amount estimated, the corporation's net income would amount to less than a 6 per cent. return, and that the court did not regard as reasonable. The ruling by the court that the gas legislation violated the Fourteenth Amendment to the Constitution, will, it is understood, be brought promptly before the Federal Court of last resort for review.

While complete returns from the New York state banks and trust companies as to their condition on December 19, under the call of the State Banking Department, are not yet available, the reports which have been made public are decidedly interesting as indicative of the changes in condition which occurred in the interval between August 22 and the date of the call. Of special interest are the reports from the banks and trust companies of the financial center. Twenty-seven trust companies of Greater New York have thus far reported. They show a reduction in total resources from $675,478,800 on August 22 to $521,320,800 on December 19, a decrease, as will be seen, of over $154,000,000. The collateral loans shrunk from $340,756,200 to $227,333,500, or over $113,400,000, while the other loans fell off over $12,200,000. The deposits subject to check declined from $357,596,400 to $243,939,100. There was a slight falling off in specie—a little over $3,000,000—and an increase of nearly $1,000,000 in legal tenders and bank notes. The stock and bond investments showed a decline of over $19,000,000 in book value and of over $26,000,000 in market value.

Of the state banks in the city twenty-nine show aggregate deposits of $225,000,000 on December 19, not including amounts due to other banks and trust companies. There was a net loss in withdrawals for the period of $3,056,117; eighteen banks showing aggregate withdrawals of $13,925,761, while eleven showed an aggregate gain of $10,869,644. Loans and discounts show decreases in the cases of nineteen of the banks, and naturally a general shrinkage is exhibited in the values of stocks, bonds and mortgages, as items in the resources. The banks appear to have been able to maintain cash reserves, in some cases above the limit, and a majority of them now show an increase of cash on hand, particularly of specie, which has had a wider circulation in the city than for years past. It is interesting to note that the depositors in the savings banks have availed themselves to only a very slight extent of the right to withdraw funds under the sixty-day notices, which began to expire on Thursday. From a number of typical institutions of this type considerably less than a tenth of the amount called for was withdrawn, and in other cases the deposits were many times in excess of the withdrawals. Increased withdrawals may, however, be made after the first of the year, owing to the calling in of mortgages, on account of the stringency.

Just what was accomplished by the second Hague Conference was recently indicated with clearness by a man who played an important part in its deliberations. Reference is made to Mr. James Brown Scott, the technical expert of the American delegation to The Hague, who made an address at a dinner given in his honor at Washington on Saturday evening last. Mr. Scott said that the conference was international because the nations of the earth were represented. The first conference invited but a fraction of the independent sovereignties; the second conference invited forty-six nations, and forty-four attended. The speaker grouped under six heads the most significant things done by the gathering, which, he said, aimed not only to preserve but to establish peace. In the first place it revised the convention for the pacific solution of international conflicts so as to make it more comprehensive and more adequate to meet the purpose for which it was created. In the next place it agreed unanimously to renounce force and to submit to arbitration international difficulties arising out of contract indebtedness.

A third service accomplished by the conference was the establishment of an international court of prize. It unanimously recognized the principle of obligatory arbitration. In the next place it laid the foundations of, indeed established, a court of arbitral justice, leaving, however, the appointment of the judges to the subsequent agreement of interested nations. Finally, as the result of the deliberations of the gathering, it was arranged that a third international conference of peace should meet approximately eight years hence. Mr. Scott submitted that the conference had not only justified its name but its calling; that its meeting had bettered the world and given mankind a hope for the future, and that it deserved a successor.

THE CLOSING YEAR IN GENERAL AFFAIRS.

The year now about to close will offer its fair share of material to the historian of the future. Its course has been marked by many noteworthy events, some of them having an interest passing the bounds of nationality. Perhaps the most noteworthy, by reason of the extent of international participation in it, was the meeting of the second Peace Conference at The Hague, in which forty-four nations of the earth were represented, and whose sessions consumed four months of the summer and fall. The memory of this important gathering is too fresh to require more than a passing reference, and an interesting summary of its work by a specially informed participant will be found in another place in this issue. Of even more recent occurrence was the Central American Peace Conference at Washington, which has only just concluded its work, and to which also some reference will be found elsewhere in these columns. Perhaps we ought not to omit a mention of the Arbitration and Peace Conference which met in New York City last April, under unofficial auspices, it is true, and yet not without significance, as illustrating the spread among the modern people of the desire for a peaceable solution of international disputes.

Of more direct import as helping to conserve the peace of the world must be noted the efforts of Great Britain and Russia to settle by treaty certain questions bearing the seeds of trouble in Asia, as, for example, in relation to Tibet, Afghanistan and Persia, where the area of possible friction has been limited, and that at a time when political changes in Persia afforded opportunity for the assertion of conflicting claims. Of a similar bearing are the treaty relations entered into between Japan and Russia covering important points touching their interests in Asia.

It cannot be said that the arrangements made at Algeciras in the closing days of last year have prevented trouble in Morocco, as the Casablanca episode proves, but they have at least rendered the application of a remedy easier. The world has witnessed with interest the steady maintenance of the traditional friendly relations between the United States and Japan, which were somewhat ruffled on account of the San Francisco school episode, but were later adjusted through the intervention of the President, whose good work has without doubt been strengthened by the recent visit of Secretary Taft.

Of less direct bearing upon the peace of the world, and yet evidencing the maintenance or the promotion of general concord, are the commercial agreements, or negotiations looking to agreements, which have marked the year. Among these may be mentioned the tariff agreement of the United States with Germany, the Santo Domingo treaty, the renewal of the modus vivendi relative to the Newfoundland fisheries question, the tariff agreement between Canada and France, and others of a similar nature.

Some notable events in individual countries will, of course, recur to the memory. Russia, where the system of parliamentary government is still in an experimental stage, has seen the meeting and the dissolution of its second Duma and the convening of a third one, which is less than a month and a half old, but is still in session. Persia, which is living under a constitution a year old, is wrestling with governmental problems. Early in the year, and before the constitution was two weeks old, the reigning Shah was succeeded by his son, whose reign has been a troubled one. Sweden has seen a change of rulers within the month, King Oscar II having been succeeded by his son, Gustaf V. Under the pressure of Japanese influence Korea this summer witnessed the abdication of its reigning monarch. Portugal has been disturbed by an internal political difficulty not yet entirely settled. China, under the present régime, is setting her face in the direction of constitutional government, and has not been free from sporadic disorders. India has been the scene of a political agitation which has given concern to the British government. The Transvaal has seen the meeting of its first Parliament under the new constitution. There has been some unrest of little consequence in Cuba, and some of the ever recurring trouble in the Balkan states. In England there was another failure to settle the question of Irish local government. A great administrator has retired in the person of Lord Cromer, who this year laid down his work in Egypt. The Independent Kongo State has been ceded by King Leopold II to Belgium. One of the peculiar movements of the year which should not escape notice was the wine-growers' agitation in France led by Marcelin Albert.

Leaving aside the financial stringency, which is but too fresh in the memory of everybody, the United States has during the past year furnished matter which will not be neglected by the economic historian. One of the notable movements of the year was the wave of what has been called anti-railroad legislation, which swept over the country during the early part of the year. The special feature of this movement was the enactments of laws limiting the rate of fare to be charged by railroads generally to 2 cents per mile. Among the noteworthy incidents of the movement was the veto of the 2-cent fare law in New York by Governor Hughes. Another was the legal friction which resulted between the federal and state courts from the effort on the one side to enforce and on the other to prevent the enforcement of the laws, a friction which perhaps reached its most acute phase in North Carolina. We must not fail to note also the activity of the prosecuting officers of both the federal and state governments against corporations and corporate officials, of which a notable instance is supplied by the prosecution of the Standard Oil Company. A feature of these prosecutions, it may be remarked, was the unusual amount of the fines imposed. Another movement which is deserving of attention among the incidents of the year is the spread of prohibition in certain sections of the south, the effects of which will repay attention in the future.

A movement which has already gained great headway and which may extend further is that for the development of the country's natural resources, and particularly of its waterways. This general movement, it need scarcely be said, owes much of its momentum to the energetic propaganda of the President, who early in the year appointed the Inland Waterways Commission to consider the matter, and has since given his approval to some special projects of large bearing. Of particular interest in this connection is the change in the administration of the Panama canal, the engineering work on which has at length been placed under the control of Colonel Goethals, of the Engineer Corps of the Army, under whom progress has been steady and constant. Among the special incidents of the year in the United States or its insular possessions may be mentioned the Jamestown Exposition, opened in the spring; the holding of the first election for a national assembly in the Philippines and the opening of that body in October, and the entrance of Oklahoma into the sisterhood of states. A striking incident of the year was the conviction of the former mayor of San Francisco for malfeasance in office and the redemption of that city by the forces of good government. Perhaps mention may not be out of place here of the long cruise to the Pacific, begun on December 16, of sixteen picked battleships carrying a complement of 15,000 men.

Events of a kind not readily lending themselves to general classification have not been lacking. A remarkable achievement of the year was the establishment of regular wireless communication across the Atlantic, the distance in time between the shores of which had been perceptibly shortened by the Lusitania some weeks before. Among the untoward events may be recalled the destructive earthquake at Kingston, Jamaica, in January, and the widespread seismic disturbance in April, at a date very close to the anniversary of the San Francisco earthquake of last year. There have been years more crowded with striking events, but 1907 will go down to history not entirely undistinguished among her sister years.

THE CENTRAL AMERICAN PEACE CONFERENCE.

In accordance with the programme announced at the close of the preceding week, the Central American Peace Conference adjourned on December 20, after signing the conventions agreed upon between the delegates. The final session of the conference, like the opening one, was presided over by Secretary Root, who has taken such a deep interest in the labors of the representatives of the Central American states. The addresses made at this session were conceived in an optimistic spirit. Dr. Luis Anderson, the Minister of Foreign Affairs of Costa Rica and president of the conference, assured his hearers that it could not be said now, as it was said before, that all the Central American treaties had been written in water. The delegates from those countries intended to show the world, and particularly the governments of the United States of America and of the Mexican republic, that their purpose was steadfast, and that their names had been written on documents which formed the foundation of a new era of peace, happiness and plenty of the Central American republics. All differences, all obstacles, all barriers to their happiness had, he said, been wiped out and the new Central American brotherhood established upon a sound foundation. In conclusion, he expressed the gratitude of the delegates to Secretary Root and Ambassador Creel, of Mexico, and to Assistant Secretary of State Bacon for their untiring efforts on behalf of Central American peace.

Ambassador Creel declared that the conference marked two important epochs in the world's history. For the Central American republics it was the beginning of an era of justice and of peace, and as far as the world at large was concerned, it marked the establishment of an international court which brought hope for universal peace. Its success must, he thought, be interesting to all the nations of the world. He presented at the same time a congratulatory message from President Diaz upon the work of the conference. Mr. Root's address was laudatory. He declared that during the month that had passed the loyal representatives of the Central American states had been doing for the people of those countries a service which stood upon the level of the highest achievements of the most advanced modern civilization; that they had been faithful to the interests of their several countries, but had exhibited patience, kindly consideration, regard for the rights and feelings of others, and a willingness to treat with an open mind the opinions and wishes of their fellow countrymen. With the expression of the hope that the people of Central America might have reason to look back with blessings upon the work of the conference, the Secretary declared that body adjourned.

One of the last acts of the conference was the sending, through the president, of a dispatch to the presidents of all the republics participating in which it was recommended that full amnesty be granted for political crimes and those connected therewith, a measure suggested as a token of reconciliation and fraternity. In response to this dispatch messages have been received indicating in some cases that amnesty has been granted, and in others, as, for example, in the case of Costa Rica, that such a measure is unnecessary, for the reason that no one is suffering on account of political offenses. It is worth noting that instead of the seven treaties expected to be signed, eight finally received the indorsement of the delegates, and it may be that the last one signed may be one of the most important of all. One of the provisions of this treaty is to the effect that none of the five signatory powers shall recognize either of the five republics whose ruler shall have gained the ascendancy as the result of a revolution or of a forceful overthrow of the existing government, unless the new ruler is the selection of the whole people and is elected according to the constitution after all the required provisions shall have been carried out. It was also agreed that the republics whose constitutions do not already prohibit the unlimited reëlection of a president should forthwith incorporate provisions to prevent the possibility of a president obtaining perpetual tenure of office. Another clause of importance stipulates that none of the signatories shall take part in any revolutionary movement against the other powers. In these provisions the leading members of the conference seem to think that they have found a safeguard against the often recurring revolutions and dictatorships which have wrought such

havoc to the peace and progress of Latin-American countries. Beyond question, too, the auspices under which the conference met are likely to exert an influence none the less real because undefined upon the future of Central America.

THE NATIONAL BANK RETURNS.

In view of the importance of the returns made by the national banks of their condition on December 3, the Comptroller of the Currency properly decided to issue more extended tabulations of the figures than usual. The completed returns, covering the entire country, which were made public this week, are, as a whole, satisfactory and calculated to facilitate the improvement in the financial situation. The fact that the reserves were equal to 21.31 per cent., against 21.33 per cent. in August, and compare with 20.80 per cent. a year ago, is regarded as especially encouraging. Still the figures present a number of remarkable features which would go far toward explaining the severity of the money panic and the unusual prolongation of the disturbance. A study of the same is well deserved, and will tend to dissipate some of the erroneous notions which have been prevalent during and since the panic. The following gives the items of the return compared with the last statement, that of August 22, and the one of November 12, 1906:

RESOURCES.

	Dec. 3, 1907	*Aug.* 22, 1907	*Nov.* 12, 1906
Number of banks	6,625	6,544	6,199
Loans and discounts	$4,585,337,094	$4,678,583,969	$4,366,045,296
Overdrafts	37,544,694	30,443,120	53,735,050
United States bonds to secure circulation	619,329,870	557,277,950	541,202,270
United States bonds to secure United States deposits	72,369,400	95,628,650	89,274,290
Other bonds to secure United States deposits	185,479,586	68,198,039	58,116,533
United States bonds on hand	5,212,700	7,390,840	6,738,950
Premiums on United States bonds	15,846,868	14,554,194	13,604,364
Bonds, securities, etc.	705,019,221	700,352,456	665,960,216
Banking house, furniture, etc.	168,783,790	160,845,896	146,795,566
Other real estate owned	18,786,824	20,241,914	19,881,036
Clearing House certificates, net balance	64,344,128	----	----
Due from national banks	296,358,487	334,571,436	386,654,129
Due from state banks and bankers, etc.	104,958,231	123,020,454	147,750,211
Due from reserve agents	523,828,151	614,496,352	605,237,177
Cash items	36,305,257	26,905,246	37,517,441
Exchanges for Clearing House	234,169,391	190,602,164	376,672,336
Bills of other national banks	40,698,562	31,240,127	28,814,212
Fractional currency	2,460,596	2,314,530	1,994,522
Specie	509,685,278	531,107,750	482,276,271
Legal-tender notes	151,099,458	170,515,782	152,273,887
Total reserve	660,784,736	701,623,532	634,550,158
Redemption fund	28,489,818	27,305,679	26,546,111
Due from United States Treasurer	1,940,677	4,731,854	3,788,429
Total resources	8,407,988,121	8,390,328,403	8,213,878,297

LIABILITIES.

	Dec. 3, 1907	*Aug.* 22, 1907	*Nov.* 12, 1906
Capital stock	$901,681,682	$896,451,314	$847,514,653
Surplus fund	549,614,684	548,303,662	504,548,214
Undivided profits	200,558,226	186,554,152	183,124,886
National bank notes outstanding	601,805,985	551,949,462	536,109,931
State bank notes	30,419	30,420	30,427
Due to other national banks	708,919,278	823,680,087	839,065,296
Due state banks and bankers	318,966,686	395,745,495	379,757,663
Due trust companies and savings banks	323,321,475	337,927,872	337,113,942
Due approved reserve agents	36,675,751	38,139,919	44,006,767
Dividends unpaid	1,155,144	1,083,607	1,376,455
Individual deposits	4,176,873,717	4,319,035,403	4,289,773,899
United States deposits	223,117,082	143,282,393	129,193,379
Deposits of United States disbursing officers	11,612,088	17,755,771	11,208,343
Bonds borrowed	166,073,021	59,994,634	57,336,815
Notes and bills rediscounted	20,309,972	14,415,550	9,388,945
Bills payable	80,645,256	44,760,530	35,144,890
Reserved for taxes	4,957,699	4,358,764	3,910,997
Other liabilities	7,205,923	6,859,429	5,272,795
Clearing House certificates, net balance	74,461,026	----	----
Total liabilities	8,407,988,121	8,390,328,403	8,213,878,297
Percentage of legal reserve to deposits	21.31	21.33	20.80
Percentage to dep. of cash on hand in red. fund and due from reserve agents	24.72	25.56	25.48

The changes in the important items, compared with the return of August 22, were as follows:

	Decrease
Loans and discounts	$93,246,874
Specie	21,422,472
Legal tenders	19,416,324
Total cash	40,838,796
Individual deposits	142,161,685
United States deposits	*79,834,689
Due other national and state banks and bankers	209,071,350
Due trust companies and savings banks	14,606,397
Due from national and state banks and bankers	146,943,473

* Increase.

Compared with November 12, 1906, these items show the following changes:

	Decrease
Loans and discounts	*$219,291,799
Specie	*27,409,607
Legal tenders	1,174,429
Total cash	*26,234,578
Individual deposits	112,900,182
Due other national and state banks and bankers	219,388,493
Due trust companies and savings banks	3,792,467
Due from national and state banks and bankers	214,466,648

* Increase.

It is to be observed that while the national banks up to August were expanding their loans, in the ensuing three months they were reduced by $93,246,874, with decreases of $142,161,685 in individual deposits and of $223,677,747 in the aggregate due banks and trust companies. Government deposits increased between August and December by $79,834,689, but despite this and the gold imported up to December 3, the total cash was $40,838,796 less than it was in August, a further illustration of the effect of the hoarding of actual funds being given by the amount of Clearing House certificates—$74,461,026—which are returned as outstanding on December 3.

In an interview in which he comments on the statement, the Comptroller of the Currency, Mr. Ridgely, passes an encomium upon the fidelity with which the New York banks did their duty to the public and under unfavorable conditions rose to the emergency in a most impressive way, while at a number of eastern and some western cities, notably St. Louis, the same attitude was presented, adding that "not a great number of banks fell into the regrettable mistake of calling in too much money." While this is a guarded way of stating the real position of the New York national banks in the panic, contrasted with that of a certain proportion of institutions elsewhere, it is fully borne out by the figures now made available. Comparison of the figures of the forty-nine New York national banks and those of all the 6,625 in the country between August 22 and December 3 affords the following illuminating changes:

	New York decrease	*All U. S. decrease*
Loans and discount	*$59,396,700	$93,246,874
Individual deposits	*96,266,300	142,161,685
Due banks and trust companies	27,412,600	223,677,747
Cash	43,158,900	40,838,796

* Increase.

The New York banks increased their loans and individual deposits in the face of the general decreases in those items, and surrendered cash to an amount in excess of the total loss by national institutions. In short, they financed the gold importations, of which no part remained with them, and in a measure filled the office of a central organization at a time when the general impulse in banking circles was to seek individual safety at any cost, irrespective of all other considerations. It should also be called to mind that prior to the disturbance of this autumn and winter the inflation of credit could not be laid at New York's door. As shown by the national bank returns of August 22, 1907, compared with those of January 26, 1907, there was a decrease of $16,198,470 in the loans of the New York City national institutions and an increase of only $23,059,222 in those of the banks in all the eastern states, whereas the middle west, the west and the south had contributed $181,222,644 in that period to an aggregate expansion of $215,316,340 in that item throughout the country. In other words, the rather prevalent idea that the New York banks first fostered an inflation in business and speculation and when the storm broke intensified the disturbance will not bear the test of examination in the light presented by the official figures.

UNION PACIFIC'S POSITION.

Although the income account of the Union Pacific Railroad Company for the last fiscal year was published some time ago, and while the revelations involved in the Interstate Commerce Commission's investigations had revealed the essential facts about the company's ventures in the way of investments in securities of other roads, the full annual report covering the finances and operations of the system for the twelve months ending June 30 is an unusually interesting document. The management may be commended for making a pretty full exposition of the affairs of the corporation, but, on the other hand, as the report is put forth so tardily and does not cover anything beyond the date on which the fiscal year ended, there is room for some uncertainty as to what may have occurred in the last six months, especially with regard to the company's investments. On the whole, the document creates the impression of being a justification of the way Union Pacific's affairs have been guided by its management under Mr. E. H. Harriman. So far, indeed, as the financial results are concerned, the showing is a remarkable one. Taking the income from operations and that from investments together, after paying the full 4 per cent. dividends on the preferred stock and 10 per cent. on the common (of which last amount 6 per cent. was from the system's transportation operations and 4 per cent. from investments), there was a surplus of over $12,600,000. In other words, the earning power of the company's lines plus the other income was equal to 16 per cent. on its common stock, as against 10 per cent. paid thereon. Moreover, the growth of the system's business since the reorganization has been fully as remarkable as anything in the recent history of American railroading. The report gives in a tabular form the results by years from 1898 to 1907, inclusive, from which are taken the following, representing the expansion which has occurred in that period:

	1897-98	1906-07
Mileage	5,325	5,644
Gross income	$33,281,125	$87,474,766
Net earnings	13,700,834	44,829,542
Fixed charges	4,488,260	8,652,621
Surplus	9,212,574	36,176,920
Dividends	1,781,130	23,530,036
Surplus	7,431,443	12,640,884

With only an insignificant increase in mileage, the company in nine years nearly trebles its gross and quadruples the amount applicable to dividend payments, and in spite of the great increase in the latter, the surplus for the year is still nearly double what it was in the first year after the reorganization.

Interest in the report, however, naturally centers in further facts about the company's holdings of the stocks of other companies, the acquisition of which was the result of the events of 1901, when the Hill and the Harriman forces locked horns over the Northern Pacific property. While the company still retains considerable holdings of Northern Pacific and Great Northern as well as of Northern Securities "stubs," which were received on the dissolution of the Northern Securities organization, it has, as was set forth some time ago, sold the bulk of such holdings and devoted the proceeds to the purchase of large blocks of Atchison, Baltimore & Ohio, Illinois Central, St. Paul and Chicago & Northwestern shares. There were on June 30, 1907, held by the Union Pacific Company or its controlled organizations $251,909,063 of "investments," representing a cost of $227,346,292 and a market value on December 5, 1907, of $228,403,790, while the income derived therefrom in 1906-07 is given as $15,000,890, which latter sum includes the amount derived from its Southern Pacific stocks. The report states that there was paid for its Northern Securities stock $83,204,691. The sales of the Northern Pacific and Great Northern shares received therefrom brought in $117,869,799, showing a profit of $34,665,708, while the new investments in Atchison, Baltimore & Ohio and other shares cost $128,881,732, there being still on hand Northern Pacific, Great Northern and Northern Securities stubs having a market value of $22,395,208. In short, the report figures out that the entire Northern Securities operation shows a gain of $57,060,916, with an annual revenue from dividends upon the stocks on hand of $6,904,995.

At the same time the company is chargeable with the further payments to be made on installments of subscriptions for the new stocks of the St. Paul and Great Northern, as well as the deferred payments which it is understood have to be made upon the purchase of the Baltimore & Ohio holdings. It may be claimed that in the light of recent events the valuations placed on the "investments" are high.

SOME FEATURES OF THE GOLD-IMPORT BUSINESS.

Editor of BRADSTREET'S:

SIR—It has appeared from items in the public press during the past few weeks that there has been an actual profit in the transfer of gold to this country, entirely aside from the premium at which currency has been selling in the New York market. The conditions which govern the exchange houses in making their engagements of gold for importation must be thoroughly established, but the writer has been unable to obtain a knowledge of what these conditions are, and is desirous of obtaining this information.

What are the approximate expenses involved in the original purchase, transporting and resale of gold in this country?

Why is it that gold is drawn from England when the discount rate of the Bank of England is lower [higher?] than that of the Bank of France?

SUBSCRIBER.

Canton, Pa., December 9.

A volume rather than a newspaper column would be needed to fully reply to the above inquiry, so many and varying are the factors which have a bearing upon

all operations in international exchange. There is no doubt, however, that the importations of gold which have been in progress since the middle of October have been highly profitable to the banking houses and other concerns which arranged them, even though they were conducted in the face of a 7 per cent. Bank of England rate, a stringent money market on this side of the ocean (thereby entailing a large temporary loss of interest while the specie was in transit), the highest prices for eagles and gold bars which have been seen in a generation, and quotations for cable transfers of credits from New York to London ruling at around 4.90 or higher. The expenses of shipping gold from London to New York have also increased, the insurance rate, for instance, having been doubled. Still, against all this the premium on cash, in the form of gold or currency, at New York, ranging as it has from half of 1 per cent. to 3 per cent., has made it possible to secure profits on the transfers. There is no definite way of estimating the amount of these profits, which have varied greatly in individual cases, the currency premium being the governing factor. It is, however, the prevalent opinion that from 2 cents to 3 cents on each sovereign would be a reasonable figure at which to put the resulting gain. In other words, the profit on an importation of £100,000, or $500,000, at 2 cents would be approximately $2,000, without allowing for freight, insurance and loss of interest while the specie was in transit. The freight is 5-32 per cent., that is, approximately, $759.37 on $500,000, and the insurance at 25 cents per £100 would call for $250, while cable messages, cartage and, in the case of gold importations consisting of sovereigns, the deficiency in weight of the coins and the assay and minting charges, would figure for something. A conservative estimate of all the expenses outside of freight would be in the neighborhood of one-quarter of 1 per cent. on the gross amount involved in a gold importation.

The reason for the withdrawal of gold from London instead of Paris, in spite of the fact that the Bank of England rate is 7 per cent., while the Bank of France has not raised its figure above 4 per cent., is the difference in the policies of the two institutions. The Bank of England puts no real prohibition upon the withdrawal of gold for American account beyond raising its price for American gold coin and bars and advancing its discount rate. It also pays out sovereigns on demand against its own notes; but sovereigns, it should be observed, constitute the most expensive medium for gold-importing to the United States, owing to the shortage in weight which is allowed before they cease to be a legal tender in Great Britain. Nor has it refused to discount what is termed finance bills—that is to say, making loans on securities where the money was to be used to take gold for New York. On the other hand, the Bank of France, pursuing its traditional policy, has refused to discount finance bills except in a very guarded way, or to make foreign loans not indorsed by a foreign government, and through the influence it exercises over the Paris banking community, has restricted private arrangements in the open market with a view to sending gold to New York.—[Editor BRADSTREET'S.

THE ENGLISH COTTON-GOODS INDUSTRY.

Manchester, December 14. — Manufacturers of cotton piece goods in Lancashire still complain, but some makers are better off than others. During the past month shirtings have been sold on a fairly extensive scale, largely for India and China. On the whole, however, the demand from abroad has not been important. Offers as a rule have been too low, and in numerous instances where business has been done very little profit has been secured, while in some cases manufacturers have been willing to accept orders at a loss rather than stop their looms. Advices generally from India are rather discouraging. Owing to the lack of rain in certain districts shippers are not disposed to anticipate future requirements. Business for Shanghai has not been important. The considerable decline in the price of silver makes business very difficult to arrange. Rumors of financial difficulties in the Levant have resulted in buyers acting cautiously. On the whole the outlook for manufacturers is uncertain and business coming round is not sufficient to clear the production of the looms. Many complaints are made by makers of print cloths in Burnley. Fine goods, such as dhooties, jaconets and mulls, are also poorly situated. Home trade has not been active, buyers being afraid to operate freely owing to the uncertain raw-cotton position. Our exports of cloth keep up on a large scale, as will be seen from the following comparative table:

	November, yards	*Eleven mos., yards*
1907	516,375,200	5,820,602,400
1906	502,020,200	5,760,683,500
1905	530,139,000	5,613,018,500

India continues to receive very freely, the total shipments amounting to about 40 per cent. of our entire foreign trade. A feature is that we are exporting more freely in bleached, printed and colored goods, while there is a falling off in the shipments of gray and unbleached calicoes.

Producers of yarn for home consumption have maintained their position fairly well throughout the month. The continued strength of spinners is somewhat a feature in view of the quiet state of trade for some time. The production of the spindles is well cleared, no stocks of any moment are heard of, and certain numbers are rather scarce. The margin is wide and remunerative in most counts and qualities, and on the whole the year which is just closing may be considered the most prosperous ever experienced by Lancashire spinners. Bolton yarns made from Egyptian cotton have rather lost ground. The demand for the continent has not been so important, but shipments continue on a free scale. Some fair sales have transpired for India in 40s mule, and business is now very difficult to arrange owing to price and delivery being against buyers. Our shipments of yarn continue to increase from month to month, as will be seen from the following comparative table:

	November, pounds	*Eleven mos., pounds*
1907	22,506,700	222,077,800
1906	17,261,700	191,039,100
1905	17,892,200	186,143,100

The heavier weight exported so far this year is, to a large extent, accounted for by the freer takings of Germany, which amount on the eleven months to an increase of over 25,000,000 pounds. Other continental countries have also increased their imports. Japan and Turkey are not doing so well as some time back. Our foreign trade in textile machinery is now on a large scale and shows a tendency to increase, as will be seen from the following comparative table:

	November	*Eleven mos.*
1907	£714,578	£7,344,733
1906	611,421	6,079,301
1905	546,884	5,042,404

The trade has been a good deal concerned this month by wage disputes between the masters and the workpeople in the spinning section. The operatives in the Oldham district pressed their demand for an increase in wages for producing fine counts. After numerous meetings and the intervention of Mr. Lloyd-George, president of the Board of Trade, an agreement was arrived at which will mean an advance of about 5 per cent. in wages for the workpeople on fine numbers. The ring spinners' dispute is still unsettled. The masters and the men are showing some bitterness and the outlook is somewhat serious. W. T.

CONDITIONS AT GOLDFIELD, NEV.

Goldfield, Nev., December 20.—On the surface everything is as quiet and peaceful as anyone could desire. How long it will remain so no one can tell. All know that the miners and operators are antagonistic forces. Hitherto, the miners—the Federation—have been ruled by a clique of agitating leaders, that have dominated, dictated and ruled everything absolutely. The operators have complained, but could not help themselves. They were paying $5 per day—the highest wages of any camp in the world. The operators were, however, biding their time to shake off the Federation. The time came when the miners struck, refusing to take scrip for service. Carpenters and all mechanics and merchants took the scrip without a murmur. There was no good reason why the miners should not do the same. By their strike the miners abrogated all contracts and agreements with the operators. This was the operator's opportunity.

They found the miners would not stand by any agreement. They determined to make war on the Federation and get rid of it. They resolved not to employ any miner until he had renounced all allegiance to the Federation, and to make this an open camp, free to employ whom they pleased. The United States soldiers were brought in to preserve the peace, not restore it. The soldiers, of course, know no parties, but the operators are so situated now that if any overt act is committed it must be by the Federation.

The operators have determined to operate their mines. Just how many miners will leave the Federation and go to work cannot be estimated. Very few at this writing have done so. All that do so shut themselves off forever from going to work in any Federation camp. Strike-breakers will have to be imported, and it is feared that this may be the occasion for overt acts.

The situation of the business part of this camp may be summed up as follows: The operators have reduced the scale of wages from $5 to $4. They demand that merchants shall make a corresponding cut in the cost of merchandise, otherwise they will themselves open stores of supplies. The merchants are now considering this proposition and are willing to make all the cuts they can. Should company stores be opened the business of the camp is at an end, so far as ordinary merchants are concerned. A good deal, however, depends on the character of strike-breakers that may be imported. Should they be Americans and the company stores not be established, business will continue fair. Should the strike-breakers be low-grade foreigners, business will be hurt badly. This is the best that can be said to-day.

EDITORIAL NOTES.

The final estimates of the crop reporting board of the Bureau of Statistics of the Department of Agriculture (in which certain necessary corrections have been made in the earlier preliminary estimates), based on the reports of the correspondents and agents of the bureau, supplemented by information derived from other sources, indicate the acreage, production and value in 1907 of the farm crops of the United States named in the following table to have been as stated therein:

	Yield, 1907	*Yield*, 1906	*Yield*, 1905
Corn	2,592,320,000	2,927,416,091	2,707,903,540
Winter wheat	409,442,000	492,888,004	428,462,834
Spring wheat	224,645,000	242,372,966	264,516,655
Total wheat	634,087,000	735,260,970	692,979,489
Oats	754,443,000	964,904,522	950,216,107
Barley	153,317,000	178,016,484	136,651,029
Rye	31,566,000	33,374,833	27,616,045
Buckwheat	14,290,000	14,041,937	14,585,082
Total 6 cereals	4,180,023,000	4,854,514,837	4,530,041,382
Flaxseed	25,851,000	25,576,146	28,477,753
Potatoes	297,942,000	308,038,382	260,741,294
Hay	*63,677,000	*57,145,959	*60,531,611
Tobacco	†698,126,000	†682,428,530	†633,033,719
Rice	18,738,000	17,854,768	12,933,436

* Tons. † Pounds.

The farm value of the principal crops follows, with comparisons:

	Dec. 1, 1907	*Dec.* 1, 1906	*Dec.* 1, 1905
Corn	$1,340,446,000	$1,166,626,479	$1,116,696,738
Winter wheat	361,217,000	336,435,081	334,986,942
Spring wheat	193,220,000	153,897,679	183,085,785
Total wheat	554,437,000	490,332,760	518,072,727
Oats	334,568,000	306,202,976	277,047,537
Barley	102,058,000	74,235,097	55,047,166
Rye	23,068,000	19,674,243	16,754,657
Buckwheat	9,975,000	8,727,443	8,565,499
Total 6 cereals	2,364,552,000	2,065,886,898	1,992,184,324
Flaxseed	24,713,000	25,899,165	24,049,072
Potatoes	183,880,000	157,547,392	160,821,080
Hay	743,507,000	592,539,671	515,959,784
Tobacco	76,234,000	68,232,647	48,674,113
Rice	16,081,000	16,121,298	12,285,834
Total	3,408,967,000	2,925,227,071	2,753,974,207

The average weight per bushel is shown by reports received by the bureau to be 56.9 pounds for spring wheat, 58.9 pounds for winter wheat and 29.4 pounds for oats.

Proceedings instituted by the Texas authorities against the Waters-Pierce Oil Company have occupied the attention of the courts of late. The litigation arose out of the attempt of the Texas officials to oust the oil company from doing business in the state because of alleged violations of its anti-trust laws. The company was found guilty by the state court of first instance, a receiver being also appointed to wind up its business. An appeal was taken to the Texas Supreme Court. A suit was then begun in a federal court in Texas, the court being asked to appoint a receiver to protect the company's interests, and it did as requested. Upon an appeal to the United States Circuit Court of Appeals for the Fifth Circuit that tribunal vacated the federal receivership and remitted the matter to the state courts. On Monday the Supreme Court of Texas decided against the state on the motion of the latter for the appointment of a receiver pending the final decision of the ouster and penalty suits. On the same day a petition was presented to the Supreme Court at Washington for a writ of certiorari to review the decision of the Federal Circuit Court of Appeals vacating the order of the subordinate federal court appointing a receiver. Altogether the proceedings are a most complicated condition, and it will be interesting to see them straightened out.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Nuisance—Cotton Seed—Storage.

The Supreme Court of Alabama held, in the case of Cuba vs. Mississippi Cotton Oil Company, that charter authority to prevent and remove nuisances does not empower a municipal corporation arbitrarily to declare a building used for the storage of cotton seed to be a nuisance and to direct its demolition.

Bank—Note—Indorsement—Estoppel.

The Supreme Court of Colorado held, in the case of Moore vs. First National Bank, that a bank which, after indorsing a note to its president for collection and receiving from him a reindorsement to its own order, transferred the note for value to another without striking out its indorsement, was estopped to deny its liability to its transferee as indorser in blank.

Greene and Gaynor Fail Again.

To all appearance the last stage in the long drawn out judicial proceedings in the cases of Greene and Gaynor has been reached in the denial by the Supreme Court at Washington of their petitions for writs of certiorari. It may be recalled that these men were convicted on charges of embezzlement and conspiracy in connection with Oberlin M. Carter to defraud the United States in the work of harbor improvements at Savannah, Ga.

Federal Court—Railroad Injunction.

The United States Circuit Court for the District of South Dakota held, in the case of Jewett et al. vs. Chicago, Milwaukee & St. Paul Railway Company, that a Circuit Court as a court of the United States has jurisdiction of a suit by a shipper to enjoin a railroad company from putting into effect a proposed rate alleged to be unlawful as in violation of the Interstate Commerce law, either as unreasonable and unjust in itself or discriminatory, when the jurisdictional amount is involved.

Bankruptcy—Claim—Federal Question.

The Supreme Court of the United States held, in the case of Chapman vs. Bowen, that the bare denial by a trustee in bankruptcy of a claim of a creditor asserted under the bankruptcy act of July 1, 1898, is not the assertion by the trustee of a right under such statute so as to give him the right of appeal to the Federal Supreme Court from a decision of a Circuit Court of Appeals in favor of the creditor under section 256 of that act, which gives such appeal, when the question involved is one which would sustain a writ or error to a state court.

Reinsurance—Incontestible Policy.

The Supreme Court of Indiana held, in the case of Federal Life Insurance Company vs. Kerr, that under section 4956 of the Indiana statutes (Burns, 1901), declaring that the liability of a company making a reinsurance "shall be the same as if the original policy had been issued by such company," the company cannot add to its contract of reinsurance any conditions upon reinsuring a person whose policy in the old company has already become incontestible by its terms, and that the contract of reinsurance is not a necessary exhibit with a complaint on the policy.

Mayor's Power—Appointment—Removal.

If an officer of a city undertakes to exercise a power he must be able to show that the power has been conferred by legislative grant, and the power to remove an officer whose term is fixed for a definite period by statute is not incidental to the power of appointment. So held by the Supreme Court of Illinois in the case of People ex rel. Post et al. vs. Healy. In this case the court decided that as the Illinois school act providing for the appointment of members of the Board of Education of Chicago by the mayor, by and with the consent of the Common Council, made no provision for the removal of the appointees by the mayor, the latter had no power to remove members of the board from office.

Insurance—Heirs—Widow.

The New York Court of Appeals held, in the case of Burns vs. Burns et al., that a resident of the state of New York may in his contract of life insurance lawfully provide that it shall be construed and the insurance moneys distributed according to the laws of another state, and that the transferring of the moneys to the state of New York by the insurance association on the death of the insured, to await the decision of the courts with respect thereto, will not work such a change as to bring their distribution under the laws of New York. The court further held that where it appears that the word "heirs," as used in the certificate and in the by-laws of the association, was inappropriate to describe the succession of personal property, it would be regarded as not having been used in its strict legal sense, but as describing those persons who would take in case of intestacy, and that where the law of the foreign state where the contract was to be considered as executed provided that a widow was entitled as next of kin to share in the personal property, the courts of New York would determine her rights accordingly, though by the law of New York next of kin do not include a widow.

Insurance—Beneficiary—Wife—Divorce.

The rules of a mutual benefit (relief department) society provided that death benefits should be paid only to dependent relatives, giving a preference to the wife, unless some other beneficiary should be designated with "good and sufficient reasons for such designation," and authorized the insured to change the beneficiary by taking certain steps. In a case lately decided by the Supreme Court of Indiana it appeared that the wife of a member designated as his beneficiary by both name and relationship was afterward divorced by him for her fault, and that he married a second wife, whom he tried without effect to substitute as beneficiary. The court held (Farra vs. Braman) that the divorced wife had no standing whatever to claim the benefits upon his death as against the second wife.

Collision—Death—Claims—Recovery.

The case of The Old Dominion Steamship Company vs. Gilmore, Adm'r, arising out of the collision between the Old Dominion steamer Hamilton and the Clyde Line steamer Saginaw in 1903, and decided this week by the Supreme Court of the United States, involved the question whether the laws of Delaware, under which both companies were incorporated, applied to a claim for death on the high seas arising purely from tort, and also whether the representatives of the members of the crew of the Saginaw, who lost their lives when that vessel went down, could recover their claims in full against the owners of the Hamilton. Both these points were decided in the affirmative by the Supreme Court, which sustained the decision of the United States Circuit Court of Appeals for the Second Circuit.

Railroad's Liability—Negligence—Statute.

An Indiana statute provided for a recovery where an injury was suffered by reason of any defect in the condition of ways, works, plants, tools and machinery connected with or in use in the business of a corporation, when such defect was the result of negligence on its part in not keeping such ways, works, etc., in proper condition, or when such injury resulted from the negligence of any person in the service of the corporation to whose order or direction the injured employee at the time of the injury was bound to conform and did conform. The Kentucky Court of Appeals held, in the case of Louisville & Nashville Railroad Company vs. Melton, that such statute could not be held to be unconstitutional on the ground that the state could not establish one rule for carpenters in the service of a railroad and another rule for carpenters in the service of other people.

Crossing Tracks—Negligence—Brakeman.

The Kentucky Court of Appeals held, in the case of Southern Railway in Kentucky vs. Clark, that crossing over or between freight cars to which an engine is attached is a difficult and dangerous undertaking in the daytime, and more so at night, and that when one attempts to do so in either daytime or nighttime without having notified the engineer or conductor, he is guilty of a reckless disregard for his own safety and is not entitled to recover for his injury. In the case before the court it appeared that a person desiring to cross between the cars of a standing train was told by a man with a lantern, whom he took to be a brakeman, that the train would not move for some time and to "come on through." The court held that this fact would not make the company liable for an injury received by being caught between the bumpers in passing between the cars, as it had been repeatedly held that a brakeman has no power by virtue of his position to bind his employer, but that the conductor is the representative agent of the company as to the train in his charge.

BUSINESS NOTES.

Expenditures for Education.

According to Dr. Elmer Ellsworth Brown, United States Commissioner of Education, very nearly $400,000,000 was spent on American education in 1906, and more than three-fourths of that vast amount was spent on the common schools. This is the account:

Common schools	$307,765,659
Private elementary and secondary schools	21,370,309
Universities, colleges and technological schools	44,783,326
Normal schools	6,748,924
Professional schools	3,000,000
Schools for the defective classes	7,630,503
Reform schools	5,381,189
Commercial schools	3,000,000
Total	399,688,910

If the cost of all the other many forms of private and public education could be ascertained and added the total would doubtless reach $500,000,000, a sum very far greater than the outlay for education by any other country (or several countries combined) in the world, benefiting 19,193,513 pupils directly and 83,000,000 people directly and indirectly. The 1905-06 school year enrollment was:

Public schools and colleges	16,783,564
Private schools and colleges	1,651,283
Public special schools	456,271
Private special schools	302,395
Total enrollment	19,193,513

Mexican Investment and Mining.

The Mexican government has issued a bulletin showing that during the first year of Mexico's monetary reform, by which the country was placed on a gold basis, approximately $86,000,000 was invested there by the United States, France, England and Germany. This does not include the amount invested in machinery for mines and industrial plants, for merchandise and to pay debts, or for the purchase of bonds of the federal and state governments. The investments were as follows: In banks, $57,600,000; mortgages, $2,000,000; industries, $9,900,000; mines, $7,500,000; real estate, $3,500,000; railroads, $6,000,000. By far the greater part came from the United States. This was during the fiscal year 1905-06. It is estimated that during the last fiscal year nearly double this investment of foreign capital was made. The production of gold during the last fiscal year amounted to $36,414,444, which is 6½ per cent. more than in the year before. Mexico now occupies sixth place among countries in the production of gold, and in view of the mines recently opened, production will be increased considerably during the current fiscal year. The production of silver has diminished $3,500,000, and has been 168,000,000 ounces, against 171,000,000 ounces the preceding year. Minister of Finance Limantour attributes this decrease to the fact that the companies have moderated the production, as they considered the quotations of silver too low for the production of this metal.

The Giant Iron Range.

"The Mesaba range continues to bear out its Indian designation as the 'giant' of Lake Superior iron ranges. It is apparent that not only must it continue to furnish more than 60 per cent. of the total shipments of lake ores, but that as the deep mines of the old ranges actually diminish in output the Mesaba must make up their deficiencies," says the *Iron Age*. "As the iron-ore statistics of each year show how dependent the steel industry of the country is upon the great blanket formation of Minnesota, it is more and more difficult to realize that there should ever have been the state of panic that was produced by the oncoming of this additional supply with its unparalleled cheapness of mining. Just as hard—harder, perhaps—would it have been to realize, when the ten-year contracts for Adams ore were made in the late nineties, that before the termination of those contracts Mesaba ores and all Lake Superior ores would have more than doubled in value per ton as they lay in the ground. A ten-year statistical exhibit is given herewith, designed to emphasize the eminence of the Mesaba range, giving total shipments from all Lake Superior mines, with total shipments each year from Mesaba mines:

	Total shipments	*Mesaba shipments*	*Inc. all ranges*	*Inc. Mesaba range*
1898	14,024,673	4,613,766	1,560,099	337,957
1899	18,251,804	6,626,384	4,227,131	2,012,618
1900	19,059,393	7,809,535	807,589	1,183,151
1901	20,593,507	9,004,890	1,534,114	1,195,355
1902	27,562,566	13,342,840	6,969,059	4,337,950
1903	24,289,674	12,802,542	†3,272,892	†450,298
1904	21,822,839	12,156,008	†2,466,835	†736,534
1905	34,353,456	20,153,699	12,530,617	7,997,691
1906	38,522,239	23,702,882	4,168,783	3,639,183
1907*	42,300,000	27,400,000	3,777,761	3,607,118

* Estimated. † Decrease.

The Mesaba range has furnished 77.5 per cent. of the increased tonnages of the past ten years. In 1906 and 1907 the Mesaba range furnished more than nine-tenths of the sum of the increases; in other words, 7,246,301 tons out of 7,946,544 tons. Comparing 1898 and 1907, it will be seen that while all ranges trebled their shipments those from the Mesaba range were sextupled. Taking old range shipments alone, it appears that they were only 60 per cent. more in 1907 than in 1898, while the Mesaba total this year is 600 per cent. of that for 1898. In but two years out of the ten—and those consecutive years—have declines been recorded. The largest increase, that of 1905 over 1904, came after two years of declines; the next largest increase, that of 1902, came after two years of small increases. The year 1908 will bring a fresh example of the recessions that interrupt the advances. From having gone well above the 40,000,000 line the total will now doubtless drop well down into the thirties, while a second year or even a third may come before the remarkable record of 1907 is surpassed."

Goods in Warehouse.

Assistant Secretary Reynolds, of the Treasury Department, has made a careful investigation of the amount of goods sent to warehouse at each of the principal ports of the United States and the amounts of duties due on these goods when they are removed for consumption, as compared with a year ago. These figures show that on goods now in warehouse there is due $15,814,340, as against $7,500,282 December 1, 1906. From this it is argued that if a brightening of local trade should set in, the goods might at any time be withdrawn and the fiscal situation be greatly improved. The excess of duties due over last year is almost $8,394,000, while customs revenues as shown by the daily statement are only about $6,000,000 behind last year's. The following table shows the totals:

	Value, Dec. 1, 1907	*Duties, Dec. 1, 1907*
New York	$44,149,528	$24,400,000
Boston	8,778,648	3,752,745
Philadelphia	5,120,616	3,090,003
Chicago	2,099,438	1,167,011
San Francisco	1,597,926	1,055,783
Baltimore	342,180	143,044
Tampa	557,174	204,027
St. Louis	603,594	340,952
New Orleans	635,508	305,223
	Value, Dec. 1, 1906	*Duties, Dec. 1, 1906*
New York	$32,710,148	$18,742,954
Boston	8,011,128	3,719,159
Philadelphia	3,404,766	2,319,345

New Orleans	222,671	108,285
Total	15,894,340	7,500,282

* Decrease.

Too Many Laws.

According to the New York *Sun*, there are too many opportunities for legislation in Massachusetts, New Jersey, New York and Rhode Island. These four old states have enough laws. The people are tired of legislators and of legislation. They desire nothing more than an enforcement of the wise laws now upon the statute books. Bills for biennial sessions of the legislatures in Massachusetts, New Jersey, New York and Rhode Island should be introduced, passed and signed at the earliest opportunity, and Georgia and South Carolina should follow suit. Turn the annual sessions into biennial sessions, and as quickly as possible turn the latter into quadrennial sessions. We subjoin this table showing the limit of the session in the different states:

ANNUAL.			
Georgia	50 days	New York	None
Massachusetts	None	Rhode Island	None
New Jersey	None	South Carolina	40 days
BIENNIAL.			
Arizona	60 days	Montana	60 days
Arkansas	60 days	Nebraska	60 days
California	60 days	Nevada	60 days
Colorado	90 days	New Hampshire	None
Connecticut	None	North Carolina	60 days
Delaware	60 days	North Dakota	60 days
Florida	60 days	Ohio	None
Idaho	60 days	Oklahoma	60 days
Illinois	None	Oregon	None
Indiana	60 days	Pennsylvania	None
Iowa	None	South Dakota	60 days
Kansas	50 days	Tennessee	75 days
Kentucky	60 days	Texas	None
Louisiana	60 days	Utah	60 days
Maine	None	Vermont	None
Maryland	90 days	Virginia	60 days
Michigan	None	Washington	60 days
Minnesota	90 days	West Virginia	45 days
Mississippi	None	Wisconsin	None
Missouri	90 days	Wyoming	40 days
QUADRENNIAL.			
Alabama	50 days

CURRENT BUSINESS NEWS.

Commercial.

Following are Sauerbeck's index numbers of the prices of forty-five commodities, the average of the eleven years 1867-77 being 100:

	Average		*Monthly Nos.*
1878-87	70	February, 1895	60.0
1887-96	63	July, 1896	59.2
1890-99	66	July, 1900	76.2
1897-1906	70	December, 1901	68.4
1883	82	November, 1906	78.6
	—	December, 1906	79 7
1896	61	March, 1907	80.0
1900	75	May, 1907	82.4
1901	70	June, 1907	82.0
1902	69	July, 1907	81.1
1903	69	August, 1907	79.4
1904	70	September, 1907	79.1
1905	72	October, 1907	78 8
1906	77	November, 1907	76.7

It is stated that flour shipments from Minneapolis for 1907 will fall short of 1906 shipments by nearly a million barrels. This decrease apparently has not been wholly due to the financial flurry of the fall, as the figures for each month show that only in three months in the year have the shipments for 1907 exceeded those for the same months in 1906. The shipments so far this year aggregate 13,825,375 barrels, while for the same time in 1906 14,573,123 barrels of flour were shipped, a difference of 747,748 barrels.

According to the *National Provisioner*, a good steer properly and at the same time profitably cut up will yield the following percentages of dressed weight, given in round numbers so as to be more easily memorized: Loins, 15 per cent.; ribs, 10 per cent.; rounds, 21 per cent.; chucks, 19 per cent.; plates, 16 per cent.; flanks, 4 per cent.; shanks, 7 per cent.; tallow, 3 per cent.; kidneys, .25 per cent.; sausage meat, 1 per cent.; shank meat, 1.50 per cent.; tankage, 2 per cent.; loss in cutting, .25 per cent.

Reports compiled by manufacturers and merchants for the St. Louis Merchants' Exchange show that the trade of that city for 1907 will approximate $1,000,000,000. As hundreds of companies make no statement, an exact estimate is not available, but that sum is taken as a fair total. This is a new record, even surpassing 1906.

There has been a remarkable diminution in wheat planting in the Punjab because of the prolonged drought. The area has shrunk from 9,000,000 to 5,000,000 acres. Many of the permanent canals are running short, while the irrigation canals are quite dry.

Consul George Nicolas Ifft, of Annaberg, makes estimates of the 1907 sugar production of Europe, based upon detailed reports from all the sugar manufacturing centers. These give an output for all Europe of 6,288,000 tons, as compared with the output of 6,639,000 tons in 1906. This is a decrease of 349,000 tons. The estimate distributes the sugar output in tons, as compared with that of 1906, as follows:

	1906	1907
Germany	2,241,000	1,997,000
Austria-Hungary	1,330,000	1,393,000
Russia	1,433,000	1,380,000
France	747,000	704,000
Belgium	281,000	238,000
Holland	179,000	166,000
Italy	115,000	140,000
Sweden	156,000	111,000
Spain	89,000	109,000
Denmark	66,000	50,000

The leading express companies report a very material reduction in receipts from holiday traffic.

Statistics for the eleven months of the calendar year 1907, together with an estimate of the business of the port of New York for December, place the foreign commerce of New York for the year now closing at $1,503,332,902, a gain of $110,127,325 over the calendar year of 1906. These figures show this year's business to be the largest recorded since the establishment of the local custom house, more than 100 years ago. The figures are exclusive of foreign merchandise exports sent out through the port, as well as gold and silver movements. Imports of foreign merchandise at New York are placed at $837,692,737, and exports of domestic merchandise at $665,647,175. The duties collected in 1907 are expected to reach $212,767,125, compared with $209,908,335 in 1906. The movements of gold and silver show $121,665,769 imported and $79,513,781 exported this year.

The dry-goods market reporter of the *Journal of Commerce* says it is estimated that 5,000,000 cotton-mill spindles in New England closed Tuesday for the balance of the week, and further organized curtailment will be continued for the next sixty days.

It is estimated that the year 1907 will show lighter stocks of lumber in northwestern wholesale dealers' hands at its close than at the close of 1906. The business for the year will be just about even with that of 1906, and as the cut was considerably less, stocks necessarily are smaller. Full figures covering the entire northwest are unobtainable yet, but the Minneapolis mills produced 214,192,932 feet, compared with 297,112,811 in the calendar year 1906, a decrease of 82,919,879. This winter the log cut will be smaller, as the logging companies have reduced working forces in the woods. Generally speaking, the outlook at this time is for a rather light general lumber business in the early part of 1908, beyond which lumbermen have not made much calculation.

Superintendent Stevens of the New York State Department of Public Works announces that the canal tonnage for the season was: Erie, 2,415,548 tons; Champlain, 678,506; Cayuga and Seneca, 112,570; Black river, 58,013; Oswego, 143,277. There was an increase in Erie canal shipments over the season of 1906 of about 30,000 tons. The largest falling off was on the Champlain canal, where there was no interruption to navigation, and where the tonnage was 62,477 tons less than in 1906. There was a falling off on the other canals, where also there was no interruption to navigation, as follows: Cayuga and Seneca canal, about 50,000 tons; Black river, about 19,000 tons; Oswego canal, about 30,000 tons. The net decrease was 132,993 tons.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom — Occasional complaints are heard regarding the rather poor condition of the crop and the deficient acreage. France and Germany—The weather continues unseasonably mild, although there are no complaints heard regarding the crops. Hungary—It is officially reported that seeding is finished, but germination is not generally satisfactory owing to the dry, cold weather. Roumania—Both the weather and crop outlook is rather less favorable. The total reserves of wheat in the country amount to 5,600,000 bushels, and of this amount it is expected that the port of Sulina will have a winter stock amounting to 4,000,000 bushels. Russia—The weather in the south continues generally unfavorable. Arrivals at the ports are very light. In the east further complaints are heard regarding the outlook for the crops. Italy—The weather is wet, and as a result there is a decrease in the acreage. Spain and North Africa—The crop outlook is favorable.

The wool clip for 1907 is estimated at 298,294,750 pounds, valued at $78,263,165, as against 298,915,130 pounds, valued at $79,721,383, in 1906.

Financial.

This table, taken from the *Journal of Commerce*, presents a summary of the dividend and interest payments January 1 by companies:

Dividend payments	1908	1907
Steam railroads	$32,312,212	$30,965,200
Industrial	36,782,617	39,312,212
Street railways	7,657,385	7,621,425
Bank and trust companies	8,200,000	8,300,000
Total	84,952,214	86,198,837
Interest payments		
Railroad	73,500,000	68,500,000
Industrial	12,800,000	10,500,000
New York traction	2,300,000	2,295,000
Government bonds	2,714,544	12,000,000
Greater New York City	1,588,000	1,500,000
Total	100,702,544	94,795,000
Grand total January payments		185,654,758

The November Canadian bank statement issued December 20 shows a large decrease in current and call loans in Canada and elsewhere. There is a shrinkage of deposits payable on demand and a heavy withdrawal of savings deposits. There is a decrease of $1,109,000 on the month on call and short loans in Canada and of $6,748,000 on call and short loans abroad. In October about $15,000,000 were called in on loans abroad. Current loans in Canada were shortened last month by nearly $9,000,000. Current loans abroad were decreased by $1,750,000. There is a shrinkage of $19,648,000 in total assets. Deposits on demand show a decrease of $9,968,000 and savings a shrinkage of $7,885,000. The total liabilities show a net decrease of $20,626,000.

A New York Cotton Exchange membership sold this week for $10,000.

The report of the State Banking Department of Wisconsin shows that the state and mutual savings banks of that state issued only $654,097 in Clearing House certificates during the recent money stringency.

A deposit account for $1,148 with the Knickerbocker Trust Company sold at auction Thursday at 60 cents on the dollar.

Only once in the past thirty months has there been a duller day than last Tuesday on the New York Stock Exchange. That was on June 24 last, when the day's sales aggregated 140,655 shares, against 163,145 shares Tuesday.

An Asheville dispatch says that Governor Glenn, of North Carolina, in replying to demands made upon him by representatives of New York holders of North Carolina reconstruction bonds, declares that the bonds are fraudulent and that no payment or settlement will be made.

Statistics just compiled show that the dividends paid to stockholders of New Bedford cotton mills in 1907 have been the largest in the history of the city. The total dividends of eighteen corporations is $2,578,270, on a capital stock of $18,770,000, an average of 13.73 per cent. Last year the average rate was 8.92 per cent.; in 1905 it was 6.6, and in 1904 the percentage was 5.2. In 1906 the total dividend payments amounted to $1,373,500. That was considered a remarkable showing, but the amount distributed this year to stockholders is nearly double that of last year.

The Missouri Pacific Railway Company on Thursday declared a semi-annual dividend of 2½ per cent., payable in stock January 30 to stockholders of record January 4.

Thursday was the day on which the "sixty-day withdrawal notices," required by the New York City savings banks from all depositors who attempted to make hasty withdrawals of deposits at the time of the October panic, expired, and many of the large institutions had prepared themselves to pay out large sums. Few depositors asked for their money, however, and the aggregate withdrawals were so small as to be really insignificant.

The banking returns for Ireland show that deposits in the joint-stock banks on June 30 last amounted to more than $240,000,000, which is the highest amount on record and about $11,000,000 more than in June last year.

The Vulcan Detinning Company has deferred action on the dividend on its preferred stock. The previous disbursement on the issue was 1¼ per cent., and was made on October 21 last.

Directors of the Knickerbocker Ice Company have declared a semi-annual dividend of 3 per cent. on the preferred stock, and recommended that a dividend be paid on the common stock at a later date in the form of scrip.

Industrial.

The total output of crude borax in the United States for the year 1906 was 58,173 short tons, valued at $1,182,410, as against 46,334 short tons, valued at $1,019,154, in 1905, an increase in 1906 of 11,839 short tons in quantity and of $163,256 in value. The imports of borax, boric acid and borates into this country in 1906 were valued at $62,979, an increase of $20,179 over the value of the imports for 1905, which amounted to $32,800.

In reply to inquiries from the United States concerning the inducements and opportunities in Argentina for American emigrants, Consul-General Alban G. Snyder, of Buenos Aires, writes as follows: "While the opportunities for the advancement of American commerce are almost illimitable, this is no place for men without capital, and while men with small capital might do well, there are so many obstacles that even these have better opportunities in the United States. Many Americans, led on by false reports and buoyed up with hopes of finding homes and fortunes in Argentina, encountering conditions of which they never dreamed or little thought, and realizing their mistake too late, have called at this consulate-general for assistance, which should serve as a warning to others against taking similar steps, the results of which might wreck their future."

At a conference between independent window-glass manufacturers of Ohio, Indiana and Pennsylvania and representatives of the cutters and flatteners, an agreement was reached Saturday last whereby 3,000 cutters and flatteners will receive an increase of 10 per cent. in wages. The signing of the agreement means the gradual resumption of work at the factories. The manufacturers declined to consider further the demands of the blowers and gatherers, who number about 8,000, and decided that these employees would not be permitted to return to work except at the proposed reduction of 25 per cent. from last year's scale.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

The biggest contract ever awarded for tin cans has been let by the California Fruit Canners' Association to the American Can Company, of Pittsburgh. It calls for 300,000,000 tin cans, to be delivered in five years from January 1, at the rate of 60,000,000 cans a year. The cans will be used entirely for fruit and vegetables raised in California.

It is stated that on January 1 the Erie Railroad Company will make an extensive cut in the salaries of its clerical force. Every employee who draws a monthly salary of more than $60, from clerks up to and including President F. D. Underwood himself, will have his salary scaled down from 2 to 10 per cent. In all probability from 1,700 to 1,800 employees will be affected by the cut. It does not apply to the operating staff or to the maintenance or construction departments.

Miscellaneous.

The excavation from the line of the Panama canal last month aggregated 1,838,486 cubic yards. It is figured that at this rate the Suez canal, which required ten years for its construction, could be built in 3.8 years, or the Manchester canal in twenty-five months. The isthmus has been free from yellow fever for eighteen months and the death rate this year shows a 50 per cent. decrease over 1906.

Railroads.

According to statistics compiled by the *Railway Age*, railroad construction in the United States has been nearly as heavy in 1907 as in 1906, which was the heaviest year since 1888. The total number of miles of new track laid this year has been 5,730, of which 422 miles were in Louisiana, 341 in Florida, 385 in South Dakota, 314 in Texas and 311 in Washington. In Canada during the same time 723 miles were built and in Mexico 349 miles. The greater part of the new track was laid before the financial stringency, only a small amount of mileage being constructed after September. The orders for freight and passenger cars and locomotives in 1907 were smaller than at any time during the last seven years. The volume of orders for this part of railroad equipment was about 55 per cent. of the total of 1905 and 1906.

In publishing in this week's issue its annual detailed statement of railroad construction in the south, Oklahoma and Missouri during 1907, the *Manufacturers' Record* says: "The data thus gathered show that during 1907 there have been built in this section of the country a total of 3,331.1 miles of line, or only about seventy miles more than were built in 1906. It also shows that the probable construction during 1908 is 3,531.3 miles, or about 900 miles less than were projected for the year just ended. The amount of new construction to be credited to the south for 1907, excluding Missouri and Oklahoma, is 2,987.5 miles, and the amount to be built in the south next year is 3,338 8 miles."

The Denver & Rio Grande has announced a rate of $32.60 from Denver to New York via the Missouri Pacific, the lowest rate made in years. It is a result of the rate war now on between the New York and Chicago lines.

This table, taken from the *Railroad Gazette*, shows the number of railway cars built during the last nine years:

	Freight	*Passenger*	*Total*
1907	284,188	5,457	*289,645
1906	240,503	3,167	*243,670
1905	165,455	2,551	*168,006
1904	60,806	2,144	62,950
1903	153,195	2,007	155,202
1902	162,599	1,948	164,547
1901	136,950	2,055	139,005
1900	115,631	1,636	117,267
1899	119,886	1,305	121,191

* Includes Canadian output.

The following table shows the number of locomotives built during the last fifteen years.

1907	7,362	1899	2,475
1906	6,952	1898	1,251
1905	5,491	1897	1,251
1904	3,441	1896	1,175
1903	5,152	1895	1,101
1902	4,070	1894	695
1901	3,384	1893	2,011
1900	3,153

STOCK EXCHANGE CLOSED. (Wed., Dec. 25)

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Trade as a whole has been quiet and industry has slackened perceptibly, but the financial situation has eased, except where, as in the case of New York, large end-of-the-year disbursements have to be provided for. Previous anticipations as to the volume of holiday trade find confirmation in the reports that the distribution, while fair, was not equal to that of 1906 or of some earlier years. Mild weather is still complained of as affecting retail trade in seasonable goods, such as clothing, shoes, rubber footwear and kindred lines. At some cities the usual January reduction sales were held in December, in many instances occurring before Christmas. Jobbing trade was quiet till after the latter date, when the usual clearance sales of wash and other dress fabrics were made, arousing a fair amount of interest. Wholesale business has been quiet, and both this line and the jobbing trade note the receipt of many requests to delay shipment of goods.

Industrial lines are quieter, a very general shutting down for the holidays being noted, and the textile trades, especially, have shown a tendency to further curtail. One item in this line has been the reported agreement of nearly 80 per cent. of the New England cotton spindles to reduce or curtail production in the next sixty or ninety days. The iron and steel trade is rather quieter also, and the first cuts in finished steel are noted in a reduction of steel bars to the extent of $2 per ton. Coincidently, and despite a general slowing down of furnace output, southern iron is being offered at lower prices, while Bessemer iron is over $1 lower. There is talk of export trade being sought in iron and steel, and some large lots of sheet and tinplate bars are reported to have been disposed of for shipment to Wales. Mild weather restricts demand for bituminous coal the country over, and coke production is only about one-third the normal. Wool is easier for off-grade and low-priced lots, and buyers of goods show little interest in heavy-weight offerings for the fall of 1908.

Collections are generally complained of as slow, but favorable features are the reports that many cities are now practically on a currency basis, that the market for mercantile paper shows more life, and that special holidays declared in the time of stress in California have ended. Bank clearings show a further shrinkage for the week and are greatly below last year. Railway earnings also tend to lessen as the volume of business on the roads shrinks and the quantity of idle equipment increases.

A very favorable feature in the situation is the increase in the export trade in several lines. Wheat is prominent in this respect, with record shipments from Pacific coast ports, and the largest shipments of the year from the country as a whole. Cotton exports are also of good volume.

Stock quotations at New York tend to recover from the depression in the early part of the week, caused by renewed high rates for money on call and resultant liquidation and bearish pressure. The expectation of better financial conditions after January 1 is supported by the weakness of foreign exchange and the renewed buying of commercial paper by interior and local institutions.

Commodity markets have been dull and quiet this week, and previous to the Christmas holiday were inclined to sag on lack of buying interest here and abroad. Foreign exchanges were very generally closed for two days, and the cotton exchanges here were shut at the same time. Wheat was irregular but strong early in the week, reaching the highest price for months, to sag later on small speculative interest, but strengthened again on Thursday on poor Indian crop reports and bullish advices from the northwest and Canada, lost again later on lower cables, with changes for the week trifling. Cotton sagged 10 to 20 points early on reports of curtailment of production in New England, good-sized receipts, and some liquidation in January, but regained most of this later. An East Indian crop report points to a yield of only 2,900,000 bales, against 4,800,000 bales last year. Corn has been fairly strong on poor husking returns and confirmation of earlier reports that quality is very poor. Oats are 1@2 cents lower. Sugar has been quiet but dull. Provisions are easier on large receipts and lower prices for hogs.

While business in pig iron continues quiet, the lower price level has brought out some small orders, and incidentally developed more of a disposition on the part of consumers to "feel" the market. Southern iron is quoted at $13 per ton for No. 2 Birmingham, and $16.50 appears to be the quotation for northern irons at furnace. A buying movement is looked for after the holidays, and in fact there is some talk of purchases for investment. Although outputs are being restricted, stocks of merchant iron have accumulated at some points, owing to the inability of those who contracted for the iron to take it. Much is made of the point that prices for melting scrap are at the lowest point reached since 1904. Bessemer pig is off about $1.50 a ton. In finished iron and steel trade hardly equals one-third of the capacity. Demand for plates is somewhat more active, and a sale of 100,000 tons of sheet and tinplate bars is reported as having been made to England and Wales, delivery to be in the first half of 1908. In the east bar-iron makers are closed down for a fortnight, and independent producers of sheets and tinplate have agreed to maintain outputs on a level with demand. The railways are still negotiating for rails. Sheet bars are off $2 a ton, and while other reductions on finished or semi-finished steel are looked for, it is not expected that any radical cuts will occur, as the industry appears united against marked reductions. Although the output of coke is at low ebb, there is more life in the market as regards future business, a fairly large tonnage for the first half of 1908 having materalized, and the decline in prices appears to have been checked. Anthracite coal is dull, the weather being against activity, and the curtailment of manufacturing has made for weakness in bituminous coal. Copper, spelter, lead and tin are firmer in price. However, domestic demand for copper is light, the advance being ascribed to speculation, although January is expected to bring a better demand.

Bank clearings for the week ending December 26 (a holiday period) aggregate $1,822,637,000, a decrease of 17 per cent. from last week and of 35 per cent. from this week last year. Outside of New York exchanges amount to $791,957,000, 16 per cent. under last week and a loss of 20 per cent. from the week last year.

Business failures for the week ending December 26 number 248, against 300 last week, 161 in the like week of 1906, 212 in 1905, 218 in 1904 and 209 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending December 26 are the largest of the present year, aggregating 6,254,519 bushels, against 4,861,122 bushels last week, 2,494,832 bushels this week last year and 4,291,543 bushels in 1901. For the twenty-six weeks of the fiscal year the exports are 113,976,274 bushels, against 93,668,326 bushels in 1906-07 and 144,190,303 bushels in 1901-02. Corn exports for the week are 1,043,726 bushels, against 1,021,779 bushels last week and 1,660,008 bushels in 1906. For the fiscal year to date the exports are 24,205,678 bushels, against 23,830,489 bushels in 1906-07.

IN CANADA.

Activity has been confined entirely to holiday trade, which has been of good volume, best reports coming from the west. Wholesale trade is naturally quiet, but a good reorder business is looked for after the new year, and collections also are expected to be better. Country retail trade has been good. Toronto reports some wholesale lines as quieter than usual in December, the fur trade especially so. Retailers in this line have been cutting prices. In the northwest the weather has favored the railroads, and a large movement has been made. Grain in the northwest is reported to have moved more freely than usual. Failures for the week number 50, as against 40 last week and 18 in this week a year ago. Clearings for the week aggregate $71,479,000, a decrease of 15 per cent. from last week and a loss of 4.4 per cent. from this week a year ago.

TRADE REPORTS.

In New York cotton yarns are unsettled, with prices tending lower. Orders are sparingly placed, and even when special prices are quoted manufacturers will only buy for immediate wants. Manufacturers of shirts, gloves and neckwear report that their early orders were fair in amount, but that cancellations are numerous. Jobbers of hosiery and knit goods say sales are light and conditions are not very favorable. Wholesale grocers find business dull, and though holiday purchases added slightly to the output, the volume is below the average. Retail trade is fairly active and failures are few. Flour receivers report a moderate movement in the higher grades, but absolute dullness in the lower ones. Jobbers still seek concessions which receivers will not grant. Dressed meats are in goodly supply, and owing to reduction in price, demand is good. Receipts of poultry are large and prices low, and this is thought to have had some effect on the price of meats. Receipts of butter are up to the average; demand is fair and price firm. Fresh eggs have declined 7 cents on increased supplies, but the better grades of refrigerator eggs continue steady in price. Demand for hides is poor despite the very low price. Holders, however, are not pushing sales as they look for better figures the coming year. Collections continue fair. Shoe trade is quiet, and dealers are looking for lower prices. Business in china and glassware during November and December was confined to quantities just sufficient to keep up a fair assortment of goods. Manufacturers, importers and jobbers anticipate a good spring business, and should there be any indication of increased duties importers will give unusually large orders before the expected increase takes place. During the month collections have improved, and there seems to be a general desire to clean up and start the new year free from debt. A more cheerful feeling appears to prevail among copper interests. Pig iron also is in better inquiry, although business is still light. Machinery dealers report increased business, and a better feeling seems to prevail in the trade generally. Foreclosure sales of realty almost invariably result in the plaintiff purchasing the property offered. In the building trade very little is done, and no plans for operations of any importance have been filed. In the paper trade dealers are working cautiously, and business is confined to supplying present wants.

The following telegrams show trade conditions at the cities mentioned for the week ending December 27:

BOSTON.—Holiday trade in dry and fancy goods was not so large as in previous years, sales being mostly of inexpensive sorts. Trade was stimulated to some extent by early announcements of mark-down and clearance sales, and there is general advertising of usual January clearance sales to begin in December. Jobbing of dry goods is quiet, and preparations are making for clearing up accumulated stocks. While material improvement in the business outlook is not indicated by actual dealings, there is a feeling that conditions are likely to improve after the new year. The movement in chemicals is not brisk. Blue vitriol is not active and nitrate of soda is dull. Drugs are in only moderate demand. Opium shows no improvement, and there is only a slow call for quinine. The furniture business is quiet; orders for spring delivery are coming in slowly and collections continue poor. Conditions are quite satisfactory in the piano trade, sales have kept up well and factories are being run on full time. Electrical supplies are in less demand and collections are slow. Retail trade in hard coal is quiet on account of the mild weather. Wholesale trade is fair. In bituminous coal, the open winter and the condition of the money market, as well as the shutting down of many factories, make trade very quiet. Lumber is very dull. In iron, steel and other metals business is slow. Paints and painters' supplies show little change, with the exception of glass, which is in brisker demand. The holiday demand for poultry this year was well up to the average, but quotations were low. Grocery jobbers are preparing for stock-taking and are limiting purchases to immediate requirements. Collections continue only fair.

PROVIDENCE.—Business generally is quiet, though a steadier feeling prevails. In the jewelry trade it is a little off season and salesmen have just started out with their spring lines. Collections are slow.

PORTLAND, ME.—Holiday trade is estimated to have been 25 per cent. less than last year. Wholesalers report business quiet. Few factories are curtailing output.

PHILADELPHIA.—Money is easier and currency is in better supply. Commercial paper is in more active demand for investment by interior banks. Better financial conditions are expected after the middle of January. Textile manufacturers have curtailed production by reducing working hours, and are buying practically nothing except to piece out orders in process of manufacture. There seems to be a general feeling on the part of manufacturers and jobbers that after January 1 the demand for merchandise will be better, and as there is no great accumulation of manufactured goods, business will resume its normal condition. Collections continue slow, and while money is easier it is not cheap, and there is no encouragement to borrow. Retail trade for December is thought to have fallen behind last year, generally speaking, though some of the larger stores claim that not only the month's sales but the entire year shows a gain over 1906. Flour is in rather better request and quotations are strong. Chemicals and dyestuffs rule dull and steady, and paints show a falling off in business done, though there is a very good demand for future delivery. Lumbermen report no change in their field, and conditions appear to be normal, retailers buying only what they immediately need. Hides and skins continue dull, with demand quiet, supply full and prices weak. Leather shows no appreciable change, demand being quiet and prices fairly steady. Shoe dealers report business in keeping with the season, demand being fair at steady prices. Tobacco sold now is largely for January delivery. Manufacturers of cigars are fairly close up on orders; many have reduced their force, also their hours, so that most attention is now given to collections and the annual inventory. Prices on some domestic goods are soft, though expected to be firmer through January, when considerably more business is looked for. Liquors are in very small demand, distillers do not care to shade prices, and wholesalers find no advantage in buying now beyond their present needs, which are small. The anthracite coal trade is good and prices are strong, but bituminous miners and dealers say it is a long time since the market was so dull, and they seem to have no expectation of an immediate revival. Iron furnaces continue to curtail production, and more have shut down during the past week, notwithstanding there has been a pronounced increase in demand for pig iron, especially for future delivery. Prices are believed to have reached rock bottom and a more confident feeling prevails, but buyers are moving very cautiously.

PITTSBURGH.—With the mills and furnaces the situation is practically the same as last week. In the pig-iron market there is a better sentiment and more inquiry is reported, but there have been no sales, and it is not expected there will be any of importance until after the turn of the year. In finished lines there is still a fair amount of new business being received for immediate shipment, and mills are being run intermittently to turn out what is being offered. Coke is weak at present quotations and two-thirds of ovens are out of operation. Nominal quotations for pig iron for prompt shipment at the valley furnaces are as follows: Standard Bessemer, $19; chilled basic, $18; gray forge, $17.50, and No. 2 foundry, $18. Standard Connellsville furnace coke is quoted at $1.75 to $2, and foundry coke, $3, at the ovens. Reports show a decided falling off in lumber orders during the past month, some houses doing

practically no business, but money seems to be easier and collections fairly good. Business in groceries is keeping up, but a quieter demand is looked for after January 1. Settlements are fairly prompt. Trade in shoes the past ten days has increased to some extent, as weather has been more seasonable, but has not been as large as anticipated. Settlements to date are fairly satisfactory. Collections in the dry-goods trade continue fairly good.

BUFFALO.—Retail trade was very active before the holidays. Manufacturing plants are running on short time, and collections are slow in most lines of trade.

BALTIMORE.—Holiday trade was not so large as in 1906, especially in jewelry and clothing. Regular retail trade is of small volume, partly because of weather conditions. Business at whoiesale continues very quiet. Improvement is looked for after stock-taking. Collections continue very slow, and some jobbers express their intention to push payments in cotton-growing sections where crops are being held. Lumber is very quiet, and cheaper grades are weak. Box manufacturers report a fair business. Building materials are very quiet and collections are slow. Sales of brushes for 1907 compare favorably with those of 1906. Business in harness is dull, as manufacturers are taking stock. Scarcity of raw material in woodenware keeps prices firm, with demand strong. Poultry dealers report a bare market. Receipts of Maryland leaf tobacco are fair, but demand is only moderate. The seed market is quiet. Flour is up 20 cents a barrel. Oils are steady. Turpentine is steady at a decline of 2 cents. Local banks are declaring the usual dividends. With these and the large January interest and dividend payments—over $5,000,000—and with remittances from out-of-town sources from the holiday sales, some improvement is looked for in the local money market.

CINCINNATI.—Aside from holiday trade business has been at a standstill. There is apparently a strong disposition among retailers to reduce stocks, even at heavy sacrifices. The banks are not lending money. Wheat is growing well.

CHICAGO.—Holiday trade fell below the normal, being the smallest in several years. Jobbing and manufacturing interests are doing less business, more interest being taken in winding up the year's trade. Shipments of goods previously ordered are being deferred. Retailers are advertising remarkable clearance sales of dry goods, as they are overstocked with winter goods. Inquiries for pig iron are larger owing to low prices made, $12 to $13 at southern furnaces being quoted. Many stacks are preparing to blow out, and production of pig iron is being steadily reduced. Structural material is in better request, with fair orders placed for buildings and railroads. Small sales are reported in finished material generally. Old material is not wanted. Wire products are slow of sale. Mild weather has largely reduced the consumption of coal, and traffic on western roads is 25 to 50 per cent. under last year at this date. Merchandise traffic on railroads is 40 to 50 per cent. lighter than three months ago. Grain traffic is larger, but gives indications of falling off. Fresh meat prices are easier, especially hog products. General produce is firmer and potatoes are higher. Cattle and sheep are higher, while hogs are lower. Receipts are below last year's in sheep, and above in hogs and cattle. Collections are slow. Financial conditions continue to improve. Banks are making loans more freely at 7 to 7½ per cent., and a few are buying commercial paper. Interior banks are also buying paper at 7 to 8 per cent. The sixty-day notice of withdrawal of savings deposits expired December 27, but little money was paid out, a majority of the notices having been canceled or the money paid out in the past three weeks. Railroad construction in United States for 1907 aggregates 5,865 miles, compared with 6,067 in 1906; Canada 1,900 miles and Mexico 244 miles. Seven railroads went into receivers' hands this year, with 317 miles of road and a capitalization of $13,585,000, compared with six roads capitalized at $55,042,000, with 204 miles of road, in 1906. Foreclosures were reported of six roads with a capitalization of $13,777,000, compared with eight roads, with a mileage of 322 and capitalized at $10,400,000, in 1906. New locomotives built were 3,777; passenger cars, 1,899; freight cars, 158,963, showing a reduction of almost 50 per cent. from last year.

LOUISVILLE.—Reports from all the leading retailers show that while business the last two weeks before Christmas was large, it did not come within a considerable distance of that done in 1906. All jobbing and manufacturing lines are dull, and the dealers do not look forward to any business till after the first of the year. Collections are deplorably slow.

ST. LOUIS.—Business in nearly every line for the year just ending shows an increase over 1906. However, the major portion of the year's gain was made during the spring and early fall. The financial flurry which retarded business is about over, and it is the consensus of opinion that normal conditions will soon prevail. In nearly every line of trade, but especially in dry goods, shoes and clothing, orders booked for early spring shipment have been ordered held up until further notice. However, it is the opinion of jobbers that about 90 per cent. of the orders held up will be shipped later. In some sections quite a number of orders have been canceled outright. Manufacturers of ladies' waists and ready-to-wear suits have many orders ready for shipment. Groceries and drugs are exceedingly quiet for this time of the year, but business compares favorably with last year's. Heavy hardware is quiet, but shelf and small hardware have held up remarkably well. Lumber is very dull, however, but better business is looked for in the early spring. Export trade in flour the past few weeks has been quiet, but the year's business exceeds last year's. Holiday trade among the large department stores was the best in years. Collections range from fair to good. Little demand was made on the banks during the week, but arrangements for loans to meet maturing bills in the early part of January have been completed.

KANSAS CITY.—Trade is very quiet with jobbers in all lines, many salesmen being off the road, and inventory taking has been the feature of the week. Local dry-goods houses report that spring orders for future delivery compare favorably with last year's. Retail trade is being stimulated by reduction sales. This is more noticeable with retail clothiers, who are making an effort to decrease stocks. Collections are slow. The banking situation is much easier. Interest rates continue at 7 to 8 per cent., and good loans are freely taken.

MILWAUKEE.—Holiday trade was up to expectations, but other lines and manufacturing are quiet on account of inventories. Collections are slow. The financial situation is assuming a more encouraging aspect. Transactions in money are confined principally to renewals of existing loans.

SIOUX CITY.—The financial situation is easier. Wholesale business is light. Retail holiday trade did not meet expectations. Collections are slow. The weather is warm. Shoes and rubbers are not moving. The banks are paying demands in cash. Grain and live-stock receipts are light, but dealers expect improvement after January 1.

DAVENPORT.—Retailers report holiday trade 18 per cent. over that of last year. Shoe dealers report trade slow in their line, owing to mild weather. Jobbers claim trade is fair. Manufacturing is a little dull. Collections are improving.

ST. PAUL.—Business is quiet in all lines, although not more so than at this time last year. Retail trade shows a falling off because of unseasonable weather. Collections are good in some lines, but only fair in others. The banks in St. Paul are on a currency basis. Liquidation of accounts is going on from all sections tributary to this market, save some points in North Dakota.

MINNEAPOLIS.—Holiday trade was satisfactory, though it was not up to last year's. Jobbers report present trade confined to staples, merchants being desirous of reducing stocks as much as possible before inventory. Collections are satisfactory. Flour is still quiet and production is limited, principally to filling present orders.

OMAHA.—Jobbers report trade quiet, orders being almost entirely for staples. Weather conditions are not favorable for seasonable trade. Holiday trade was a disappointment to retailers, as in most all lines it fell below the average. Local banks are now making currency payments quite freely. Collections continue backward.

LINCOLN.—Jobbers report a quiet business, with considerable improvement in collections, attributed to holiday trade. Retail trade generally reports a good business, many claiming trade equal to a year ago, although there appears to be a falling off in the lines most sensitive to financial disturbances.

SIOUX FALLS.—Retail holiday trade equaled last year's. Colder weather would stimulate sales of seasonable goods. The banks are practically on a currency basis, and continued improvement is anticipated. Collections are fair to good.

CHARLESTON.—Retail dealers report a splendid holiday business done, in spite of the money stringency. Wholesale trade and collections are quiet.

JACKSONVILLE.—Christmas retail trade was good. Wholesalers are doing little. The best merchants show timidity in buying, and orders of the poorer ones are refused unless accompanied with cash. Money is slightly easier. Collections still lag, but the general outlook has improved.

AUGUSTA.—Trade is quiet in all lines. Collections are fair.

BIRMINGHAM.—While Christmas trade was not quite so heavy as usual, it met expectations. Iron is quiet, but activity in this and other lines is looked for early in January. Collections are fair.

MOBILE.—Jobbing trade remains exceedingly quiet, with little or no improvement in collections.

MONTGOMERY.—Holiday business was fair. Manufacturing and wholesale trade are very quiet.

CHATTANOOGA.—Retailers report larger sales than any other preceding holiday season. Wholesale trade is quiet. Money conditions are good. The weather is warm. Collections are only fair.

MEMPHIS.—The usual lull has followed the holidays. Business is quiet. Collections are slow. Merchants are preparing to take inventory.

NASHVILLE.—Wholesale business is very quiet. Collections continue only fairly satisfactory. Retailers enjoyed a good Christmas trade.

LITTLE ROCK.—Holiday trade was fully as good as expected, but fell far short of last year. Collections are rather slow.

NEW ORLEANS.—Retail trade was excellent for a few days preceding Christmas. Jobbers are inactive, and collections are still unsatisfactory. Money is firm, but there are no quotations.

FORT WORTH.—Holiday trade was excellent and retail merchants are pleased. Jobbers have been active and report collections good.

DALLAS.—Holiday trade was of fair volume, but far below last year. Collections are slow and unsatisfactory.

WACO.—Holiday trade was good. Collections continue slow. Farmers continue to hold cotton, which greatly retards collections.

SAN FRANCISCO.—The discontinuance of special holidays finds the banks in a sound condition. Annual inventories now in progress show some falling off for the past three months, but business for the year was good. Collections are still slow, and money is somewhat easier.

SEATTLE.—Holiday trade was smaller than last year's, but it met with expectations. Wheat exports have been very heavy this week. Jobbers report an increase over last month in sales. Collections are slow.

SPOKANE.—Holiday trade throughout the inland empire has been excellent. The banks have commenced to make loans. Collections are fair.

TACOMA.—While the general situation is improving, holiday trade was not up to expectations in some lines. Collections are slow. Exchange is unchanged.

PORTLAND, ORE.—Holiday trade exceeded expectations. Collections are only fair. Exports continue heavy, nearly 3,000,000 bushels of grain having cleared this month.

TORONTO.—Retailers here are generally pretty well satisfied with the volume of holiday business done. Despite the fact that the trade was somewhat slow in opening, and that there has been considerable talk of coming trade depression, holiday shoppers seem to have had plenty of money with which to make purchases. In some lines of business, however, wholesalers state trade during the past month has not been quite up to average. The fur trade, for instance, has been slow. In this line, as in many others, retailers have been price-cutting, and it would appear from this that they are all pretty well stocked up. The wholesale dry-goods business is quiet, although there is a good volume of business booked ahead. Values hold steady to firm. The grocery trade is quiet, and is likely to continue so for some little while. A revival of building activity is looked for early in the season, but at present things are very quiet. Regarding general trade, it is natural that the movement should be light until the middle of January. Country trade has been good despite soft weather. Receipts of produce have been large.

MONTREAL.—Trade here has been practically confined to the retail movement of holiday goods. It is as yet impossible to exactly state just what the volume of this trade will have been or how it will compare with that of previous years. There are wholesalers who state they have found business quieter than usual at this end of the season. This would not be unnatural in view of the stringency of money and its consequences to general trade. They look forward to having a good revival of sorting trade early in the new year. Values of commodities hold steady. Retail trade in the country has been heavy. Receipts of produce increased, and prices are easier.

VANCOUVER-VICTORIA.—General business holds a good tone here. Holiday trade has been good, retailers having turned over large stocks during the past fortnight. Wholesalers are getting ready for the work of next season, and they expect a good business in all branches of trade. Signs point to increased activity in local industries when the new year once begins to open out.

WINNIPEG.—There has been a good holiday business here, and its volume will compare favorably with previous years. Wholesale trade is quiet, and will continue so over the turn of the year. The weather has been favorable to the railroads, and goods have been moving freely. The circulation of money, following the heavy retail trade, should show forth in collections next month. Wholesalers expect a good sorting trade to open up early in the year.

FINANCIAL.

Money Market.

The action of the New York loan market this week has been governed entirely by the preparations for the January 1 disbursements, which, in spite of the effects of the financial disturbance on corporations, amount to the large sum of $185,000,000. This has necessarily caused a calling and shifting of loans, and call money has ruled high, touching 25 per cent., with renewals at from 24 to 18 per cent. The conditions as regards time money were also practically unchanged, there being, in fact, hardly any offerings of that kind, the nominal quotations for sixty-day arrangements being 15 to 12 per cent., while six months' money was held at 8@7 per cent. Hardly any business was done on this basis, however, the Stock Exchange preferring to pay the high call rates for the present, in the expectation that money will become easier and more plentiful after January 1. A significant and, on the whole, favorable development is the reappearance of a demand for commercial paper, coming from out-of-town institutions, which are naturally attracted by the 8 per cent. rate, which is quoted for even very high-grade names. The situation eased somewhat on Friday, and renewals of call loans on that day were generally made at around 13 per cent.

New York Banks.

In the main the Clearing House averages of last Saturday made a satisfactory showing, the principal item being a further decrease of $9,581,100 in the loans. This was accompanied by a gain of $6,507,200, which, as was the case with the figures of the preceding week, was largely in excess of the known gain in money by the banks. It is consequently urged that currency which had been withdrawn from the banks and hoarded was being redeposited. There was a decrease of $7,371,900 in the deposits, which was $4,298,000 more than the other changes called for, the discrepancy being, in fact, entirely unexplained on any plausible theory. The above reduction of the deposits, however, rendered the reserve requirements $1,842,975 less, and the deficit in reserve was therefore reduced

by $8,350,175. The figures of the statement compare as follows with those of the preceding week:

	Dec. 21	Dec. 14	Changes
Loans	$1,165,446,800	$1,175,027,900	D. $9,581,100
Specie	181,503,100	177,165,300	I. 4,337,800
Legal tenders	51,619,400	49,450,000	I. 2,169,400
Deposits	*1,059,494,000	1,066,865,900	D. 7,371,900
Circulation	70,659,600	68,997,900	I. 1,661,700
Total reserve	233,122,500	226,615,300	I. 6,507,200
Reserve required	264,873,500	266,716,475	D. 1,842,975
Surplus reserve	†31,751,600	†40,101,175	D. 8,350,175

The following table shows the bank holdings on the respective dates:

	Dec. 21, 1907	Dec. 22, 1906	Dec. 23, 1905

Foreign Exchange.

The foreign exchange movements at New York have been quite violent this week, embracing fluctuations of as much as 1½ cents in demand sterling. The inquiry for remittances for window-dressing purposes, which was noted the week before, disappeared so far as sight bills were concerned, though there was a good demand for cable transfers, which rose to as high as 4.87.50. On the other hand, sight bills declined sharply, falling from 4.86 last Saturday to 4.84.25 on Tuesday, there being also evidence that bankers who had remitted to London during the last week or ten days were again drawing on their balances in that city. The supply of commercial bills was, on the whole, moderate, and there was no appearance whatever of any finance bills being put out. In conformity with the decline in the actual quotations, the posted rates were reduced 1 cent, making the nominal figures 4.80½@4.86½. When the market reopened on Thursday, after the holiday, there was, however, a firmer tone, due to a rather pressing inquiry for cables. This led to an advance in demand sterling to 4.84.75. On Friday, however, the market again reacted rather sharply.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Dec. 21	Dec. 23	Dec. 24	*Dec. 25	Dec. 26	Dec. 27
4.81½	4.81	4.80½	....	4.80½	4.80½

@	@	@	@	@	@
4.80¾	4.80.30	4.80.10	....	4.80.25	4.80.00

* Holiday.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87@4.87.50; commercial bills, 4.78@4.99.50; francs, 5.23¾ less 1-16@5.19⅜; reichsmarks, 93⅛@94 7-16.

No change was made in the Bank of England 7 per cent. discount rate this week. In fact, a lowering of the rate was not expected at this time. The weekly statement of the institution showed a decrease of £2,330,000 in gold, and the proportion of reserve to liability was reduced from 45.90 per cent. to 40 per cent., comparing with 37⅛ per cent. at the same time last year. In the London open market call money is 5½ per cent. and discount is 6¼@6⅜ per cent. The statement of the Bank of France shows a decrease of 2,975,000 francs, its rate remaining at 4 per cent., while the Paris market quotation for discount is 4 3-16 per cent. At Berlin the bank rate is unchanged at 7½ per cent., the market there being 7⅛ per cent.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending December 26 shows an aggregate of $1,822,637,000, as against $2,193,868,000 last week and $2,816,999,000 in the corresponding week last year. Canadian clearings for the week aggregate $71,479,000, as against $84,167,000 last week and $74,817,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	December 26	Inc.	Dec.	December 19
New York	$1,030,680,000	....	43.5	$1,243,078,000

New York Securities Market.

Holiday dullness has been this week intensified by the high rates for money, the continuance of the premium for currency and the slowness of the return to normal conditions in the general financial situation. The fact that time money is still practically unobtainable and that call loans have again risen to from 18 to 25 per cent. was, however, the chief deterrent influence, and rendered brokerage concerns decidedly adverse to carrying speculative accounts of a new kind. The situation also encouraged some operations by the bearish element, while in certain stocks there appeared to be a little scattered liquidation, which, though not important, was sufficient under the circumstances to exert a depressing influence on prices. There is, it is true, a rather general feeling that the situation is righting itself, the break in foreign exchange, which was one of the features of the week, tending to support the belief that the currency premium is about to disappear, and that with the beginning of the new year the improvement in the money market may become more rapid and pronounced. It cannot be said, however, on the whole that Wall street interests were inclined to take a very sanguine view of the outlook in respect to speculation, and several of the incidents of the week, representing as they did the after consequences of the panic, were calculated to create pessimistic sentiment. The most important of these was the action of the Missouri Pacific directors on Thursday in regard to the declaration of that company's dividend, which had been delayed for a week or more. It was generally expected that its passing or reduction would be the outcome, and when it was announced that the regular 2½ per cent. had been declared, payable, however, in stock, this course being a duplication of that of the Western Union management, the stock which had been decidedly heavy, had a further decline to 44⅛. This is the lowest price which it has touched during the whole depression. Another stock which by its action exerted an unfavorable influence, was New York Central. Its price dropped to 89 on persistent selling and an absence of support, there being practically no explanation forthcoming of its behavior. There were reports, it is true, that some of the Union Pacific holdings of Central were being liquidated, and it was also intimated that important interests in the company were letting go in view of the road's financial necessities and the difficulty in providing for them. Pennsylvania shares were sympathetically affected by this movement, and most of the standard railroad stocks inclined to sell off more or less, similar irregular weakness being shown in the leaders of the industrial list, although the Steel issues were relatively better supported than the others, while the copper stocks were somewhat neglected in the transactions. On Friday the market inclined to rally somewhat on covering of shorts, probably induced by the expectation of a favorable bank statement to-day are a decline in the premium for currency.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Wheat and Flour Exports.

[Special to BRADSTREET'S.]

The quantity of wheat (including flour as wheat) exported from United States and Canadian ports for the week ending with Thursday compares as follows, in bushels:

Week ending	1907	1906	1905
July 4	2,098,904	1,745,343	1,050,644
July 11	3,264,714	1,952,273	1,903,304
July 18	2,210,770	1,535,967	705,329
July 25	2,376,543	1,708,705	864,146
August 1	2,739,836	2,895,020	1,041,696
August 8	3,272,993	2,262,961	865,002
August 15	2,947,433	2,827,954	1,068,519
August 22	3,565,347	3,196,375	1,170,340
August 29	3,808,866	5,081,999	1,429,250
September 5	2,923,710	2,466,032	1,194,215
September 12	5,291,866	4,953,216	1,682,404
September 19	4,340,854	4,677,522	2,178,428
September 26	4,876,737	4,574,653	2,064,932

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*Dec. 20, 1907*	*Dec. 13, 1907*	*Dec. 21, 1906*
American	3,464,133	3,294,621	3,937,956
Other kinds	914,876	869,876	943,000
Total	4,379,009	4,164,497	4,880,956

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	Dec. 20, 1907	*Dec. 13, 1907*	*Dec. 21, 1906*
Great Britain and continent	2,335,000	2,224,000	2,199,000
Egypt	223,000	209,000	217,000
India	342,000	320,000	405,000
United States	1,479,000	1,411,000	2,060,000
Total	4,379,000	4,164,000	4,881,000

Boston Shoe and Leather Market.

Leather is more active, and some houses report that last week's trade would not compare unfavorably with the same week in 1906. Prices are holding strong, and accumulation of stock is small for the season. All are looking for better sales next month, and a positive shortage of desirable grades of all kinds of leather when the effect of curtailed production is reached. Shoe manufacturers are doing more business and are keeping plants fairly well employed. Shipments this week, as compiled by the *Shoe and Leather Reporter*, are as follows: Last week, 68,107 cases; preceding week, 72,096; last year, 86,513; total for 1907, 4,588,581; total for 1906, 4,922,369; decrease, 333,788.

Wool Markets.

The usual dullness prevails. Mills are taking stock, and conditions in the money market are not favorable to any large movement. The delay in the opening of the season for heavy-weight goods for the fall of 1908 is the main feature of interest, it being expected that the season will not be fully open until the middle of January or February 1. This delay is not caused by any backwardness at the mills, but by the fact that it is generally agreed that it would be impossible to procure any satisfactory amount of orders at the present time. The heavy-weight season is being depended upon to clean up the stock of clothing wools, of which the available supply mainly consists, and holders are firm because of a general belief that all grades will be wanted soon after January 1. Some manufacturers have notified the trade that they will be ready to look at lots of wool after January 1, but that at present they do not care to do more than examine sample bags. Stocks remaining in Boston are small, though somewhat larger than a year ago. The average estimate is not over 40,000,000 pounds, including 30,000,000 pounds territory, Texas and California, 5,000,000 to 6,000,000 pounds fleeces and 4,000,000 to 5,000,000 pounds foreign. The sales of the week were light, being largely clothing territories. Prices are very steady, except on small off lots, on which concessions are made.

THE ALPINE TUNNELS.

According to *Engineering News*, "the trade and travel between Italy and its ports and Switzerland and northern Europe was, up to 1870, carried by the three great mountain highways crossing the Alps at the Simplon Pass (built by Napoleon in 1806), the Splugen Pass (1822) and the St. Gothard Pass (1824). In 1867 the Brenner Railway (with an open summit in the Brenner Pass in Austria) was opened, connecting the Austrian railways with those of Italy. At about the same time the Mont Cenis railway was opened, crossing the Alps by a switchback line having steep grades, operated by the Fell grip-rail system. The traffic capacity of this was limited, but four years later, in 1871, the Mont Cenis tunnel was opened, giving a direct line westward into France. It became evident that these new trade routes would absorb so large a proportion of the business that in order to regain a due share of this business and to protect Italian and Swiss interests it would be necessary to build a railway to connect Italy with the countries lying north of the Alps. The three highway routes were all examined with a view to the possibility of railways on approximately the same lines. The Simplon was rejected as being tributary to the interests of France rather than of Switzerland and Germany. The Splugen was rejected on military grounds, as being too near the Austrian frontier and liable to seizure in case of war. The St. Gothard route was adopted, and in 1869 a treaty providing for the construction of the railway was made between

Italy and Switzerland. In 1871 Germany also became a party to the treaty. The great summit tunnel was commenced in 1872 and completed in 1881. While this tunnel is the special engineering feature, it should be understood that the St. Gothard Railway involved the construction of some fifty-three tunnels, aggregating about twenty-five miles in length.

"The Arlberg tunnel, on a railway connecting Austria-Hungary with Switzerland and western Europe, was completed in 1883. This line was eighty miles long, from Innsbruck to Bludentz, and had maximum grades of 2.5 per cent. South from Innsbruck runs the line to the Brenner Pass, already mentioned.

"The important result of the St. Gothard line in affecting French commercial interests and in taking traffic away from the French railways was early foreseen, and various projects were suggested and preliminary steps taken with a view to the establishment of a rival route. In 1870 the French government proposed a Simplon tunnel between Italy and Switzerland, as Germany had combined with those two countries in promoting the St. Gothard tunnel. The Franco-German war put a stop to all negotiations of this kind, however, but the matter was revived again in 1875 and in 1880. It was delayed largely by a controversy as to the relative merits of the Simplon and Mont Blanc routes. In 1886 the Simplon project was revived by Switzerland and a commission of engineers was appointed to investigate it. After protracted study of several routes, plans were submitted in 1890 and the contract for the Simplon tunnel was awarded in 1893. The treaty or convention between France and Italy relating to the construction and operation of the tunnel was signed in 1895.

"At that time the two French routes for the 'overland mail' were by way of (1) Modane, the Mont Cenis tunnel and Turin, and (2) by Belfort, Basel, the St. Gothard tunnel and Milan. The time from Paris to Milan was about nineteen and one-half hours by the former and twenty-two hours by the latter. The limited mail for the steamships, once a week, made the trip from London to Brindisi in about forty-two hours by the Mont Cenis route and some hours longer by the St. Gothard route. The regular trains took from twelve to fourteen hours more. The former route was, therefore, the better, as far as southern Italy was concerned, but from Milan (as a commercial center) the time to London was about twenty-seven and one-quarter hours by the Mont Cenis and twenty-six hours by the St. Gothard. The object of any new route was to get an easier and better line, suitable for higher speed, and enabling a material reduction in time to be made. It should be noted that a low-level line existed by way of Marseilles and along the coast to Genoa, thus flanking the mountain range. The distance was too great, however, for this to enter into consideration as a competitive route for international traffic.

"The object of the Simplon tunnel was to give a shorter route, with a lower summit elevation and easier grades, the latter two features involving greater length of tunnel. These objects have been attained, and the route has comparatively little trouble with snow, while it is also free from the long and difficult approach lines of the St. Gothard. The distance from Paris to Milan is 607 miles by this route, as compared with 662 by the St. Gothard and 666 by the Mont Cenis. It was estimated that the tunnel could be built in five and three-quarter years at a cost of $15,000,000, but owing to the great difficulties encountered, the time was six and three-quarter years and the cost $16,000,000. Excavation by hand was commenced in August, 1898, and by machine drills in November of that year. The headings met on February 24, 1905. The first train passed through the tunnel on January 25, 1906, and the line was opened to public traffic on May 30, 1906; operation by electric traction was established in August of the same year. Further improvements as to time and connections will be effected by new lines and cut-offs in both Italy and Switzerland."

PROGRESS OF THE UNITED STATES SINCE 1884 AND 1893.

The marvelous growth of the United States since the panic of 1893 and the earlier one of 1884 is succinctly presented by John H. Davis & Co. They say: "Adverse general business, crop and monetary conditions, which do not exist to-day, made the panics of 1893 and 1884, which were quickly stopped by gold imports and Clearing House certificates, or 'emergency circulation.' We have prepared the following tables to prove the soundness of basic elements of prosperity. There is everything in these tables for encouragement and confidence and to make a man glad that he is a citizen of such a nation and a partner in its prosperity.

OUR TRADE WITH "JAPANESE" CHINA.

A new and interesting development in the export trade of the United States is a rapidly growing movement of merchandise to Japanese territory in China. The territory referred to, which was in 1898 leased by the Chinese government to Russia and transferred from Russian control to that of the Japanese government by the treaty which terminated the war between Japan and Russia, includes Port Arthur and the adjacent port of Talienwan, now known as Dalny, with certain adjacent territory, and is the terminus of that branch of the railway which connects the Russian trans-Siberian line through Manchuria with Port Arthur and Dalny. To this geographical area, designated by the Bureau of Statistics of the Department of Commerce and Labor as "Japanese China," the exports from the United States have rapidly increased during the current year until they now exceed 1½ million dollars a month, and seem likely to show for the year about to end a total of approximately 9 million dollars, against less than one-quarter of a million dollars last year, while during the period in which it was under Russian control our direct exports to that territory never reached as much as 1 million dollars in any calendar year. The total value of shipments to "Japanese China" in the six months ending with December, 1906, was 128 thousand dollars; in the single month of January, 1907, 433 thousand dollars; in February, 127 thousand dollars; in March, 245 thousand dollars; in April, 433 thousand dollars; in June, 606 thousand dollars; in July, 698 thousand dollars; in August, 433 thousand dollars; in September, 1,540 thousand dollars, and in October, 1,605 thousand dollars, making for the ten months of the calendar year for which figures are now available, 5,691 thousand dollars, and should the November and December totals run at the rate of those of September and October, the total for the year would thus be nearly 9 million dollars.

This new movement of merchandise from the United States to Japanese territory in China is especially interesting, both in view of the interest felt regarding the effect of Japanese occupation upon American trade with that section of China and the relation of this movement to the figures of our trade with China proper. Our total exports to the Chinese empire for the ten months ending with October, 1907, are $20,432,000, against $26,400,000 in the same months of the preceding year; and if this movement to Japanese China be considered in conjunction with the exports to the Chinese empire, the aggregate to the Chinese empire and Japanese China would be slightly in excess of that of the corresponding months of 1906. How much of this merchandise passing to Japanese China passes thence to China proper cannot, of course, be determined, though the fact that the class of merchandise forming the bulk of this total consists of street cars, rails for railways, structural iron and steel and other articles of this class suggests that it is largely for use in the cities and railway lines within the territory designated as "Japanese China."

COPPER PRODUCTION OF 1906.

The following statistical statement summarizes the copper industry in the United States in 1906, as reported by the Geological Survey:

Production of copper—	
Smelter output, pounds	917,805,682
Value of domestic production of copper	$177,595,888
Mine production, pounds	916,971,387
Electrolytic, pounds	648,614,592
Lake, pounds	205,608,382
Casting, pounds	33,459,413
Total domestic, pounds	887,682,387
Domestic and foreign, pounds	1,079,052,409
Total ore treated, short tons	19,743,000
Average yield of copper, per cent	2.15
Copper ore treated, short tons	18,000,000
Average yield of copper, per cent	2.50
Imports, in terms of refined copper, pounds	215,402,841
Exports, in terms of refined copper, pounds	446,750,711
Consumption—	
Electrical purposes, pounds	340,000,000
Brass manufacture, pounds	210,000,000
Copper sheets, etc., pounds	35,000,000
Castings, etc.	100,000,000
Total, pounds	685,000,000
Prices of refined copper—	
Electrolytic, cents per pound	19.30
Lake, cents per pound	19.55
Casting, cents per pound	19.10
World's production, pounds	1,596,973,700

Most of the important copper mines of the United States are in the hands of strong companies able to advance the capital required at the start. Fully 720,000,000 pounds of the 1906 output was produced by four operators.

The production of copper in the United States in 1906 was 917,805,682 pounds. The production of 1905 was exceeded by 15,897,839 pounds, and the apparent rate of increase in 1906 was accordingly 1.76 per cent. This is an abnormally low increase, the gain in 1905 over 1904 having been 11 per cent. and in 1904 over 1903 nearly 16 40 per cent. The mine production for 1906 was 916,971,387 pounds.

The following table shows the production of mines and smelters apportioned to the states from which the copper was originally derived. The figures of smelter production—917,805,682 pounds, valued at $177,595,888—are those that most nearly represent the actual contribution of each state to the total available copper for the year:

	**Smelter*	*Mine*
Alaska	8,685,646	5,871,811
Arizona	262,566,103	266,831,864
California	28,153,202	28,726,448
Colorado	7,427,253	5,720,929
Georgia	17,182	26,198
Idaho	8,578,046	9,558,973
Massachusetts	9,744	9,744
Michigan	229,695,730	224,572,310
Missouri	54,347	54,347
Montana	294,701,252	290,700,975
Nevada	1,090,635	1,625,985
New Mexico	7,099,842	7,028,670
North Carolina	582,209	703,775
Oregon	545,859	415,803
Tennessee	17,809,442	17,979,317
Texas	51,377	51,377
Utah	50,329,119	56,593,576
Vermont	11,694	240,315
Washington	290,823	235,030
Wyoming	106,177	24,000
Total	917,805,682	916,971,387

* Lake copper and fine copper content of blister.

The bulk of the copper of domestic origin turned out by the smelters in 1906 was derived from approximately 19,743,000 tons of ore.

Of the total ore tonnage approximately 5,021,000 tons, or about 26 per cent., were of sufficient richness or of so favorable metallurgical character as to be smelted without concentration. The remaining 14,722,000 tons were concentrating ores, from which were produced 2,085,000 tons of concentrates, the average concentration being slightly under 5 into 1.

Of the 917,805,682 pounds of copper produced in 1906 by the smelters, 15,132,562 pounds were derived from the retreatment of materials which had been subjected to reduction in previous years, namely, old slags, tailings, furnace linings and the cleanings from old smelter sites. A great part of this material was slags and tailings, being consequently of low grade and profitable to treat only because of metallurgical advances.

THE KONGO TREATY.

The treaty ceding the Kongo Free State to Belgium, which has been so hotly discussed and anxiously awaited all over the world, has at last been submitted to the Belgian Parliament and published. We give below its full text, taken from the *Independent*:

Article 1.—His Majesty, King Leopold II., Sovereign of the Independent Kongo State, hereby cedes to Belgium the sovereignty of the territories composing the Independent Kongo State, together with all the rights and obligations appertaining thereto. The Belgian State hereby accepts this cession, takes over and accepts the obligations of the Independent Kongo State as set forth in Schedule A, and undertakes to respect the existing interests in the Kongo, together with the legally acquired and recognized rights of third parties, native and non-native.

Article II.—The cession comprises all real and personal estate of the Independent Kongo State, and particularly: —

(1) The properties and all the lands belonging to its public and private domain, with reservation of the dispositions and obligations indicated in schedule A of the present convention.

(2) All the shares and bonds and founder or interest shares mentioned in Schedule B.

(3) All the buildings, constructions, installations, plantations and appropriations whatsoever, established or acquired in Africa and in Belgium, by the Government of the Independent Kongo State, personal goods of all kinds, and the cattle it possesses there, together with its pontoons, and boats with their fittings, and its military material, as described in Schedule B, sections II and IV.

(4) The forests, rubber and other African products which are the property of the Independent Kongo State, as well the provisions and other merchandise belonging to it, as described in Schedule B (I and III).

Article III.—On the other hand, the cession includes all the liabilities and all the financial engagements of the Independent State, as set out in Schedule C.

Article IV.—The date upon which Belgium will begin to exercise her right of sovereignty over the territories mentioned in the first article will be determined by royal decree. The revenue obtained and the expenses incurred by the independent state from January 1, 1908, will be taken over by Belgium.

FOREST PRESERVATION.

Life says: "It is an interesting house party that the President has planned to have at the White House on the 13th, 14th and 15th of next May. He has invited the governors of all the states and territories and all the members of Congress to meet him on those days to confer with him, and with one another, upon the conservation of the natural resources of the United States. That means chiefly timber and coal, and especially timber, because more can be done by government to protect the forests that are left than can be done as yet for the conservation of coal, iron, oil or anything that is under ground.

"We hope the governors will accept the President's invitation, so far as they can, and that the meeting may lead to harmonious and intelligent action. Nothing that President Roosevelt has done will stand more conspicuously to his credit in coming years than the support he has given to efforts to save the American forests. The effort began in President Benjamin Harrison's time was helped along earnestly by Mr. Cleveland and Mr. McKinley, and has been carried forward with great zeal by the present administration, working with Mr. Gifford Pinchot, the forester of the Agricultural Department.

"The labors of the last fifteen years have resulted in the reservation by the government of 162,000,000 acres of forest lands (one-fifth of the wooded area of the country), all in states west of the Mississippi. The next Congress will be asked to provide for a great hardwood forest reserve of about 11,000,000 acres in the eastern states, in the White mountains and the Appalachian mountains. Some of this land is owned by states, some by individuals. Some must be bought; much can be protected by the coöperation of state and federal authorities.

"What is necessary is to provide immense tracts of woodlands which will be systematically protected from fire and waste, and made by intelligent use and supervision to yield an annual supply of timber in perpetuity. Incidentally, these great forest tracts are the reservoirs that hold back water, diminish floods and help the streams' and rivers' flowing.

"Nothing in sight is more important to the future welfare of the country than these great plans of forest reservation. Lumber is very dear now, and the President points out that at the present rate of use and waste our present forests will last not more than twenty-five years. The measures necessary to provide our children and grandchildren with wood and water power are comparable in importance with those we take to provide them with education."

DENATURED ALCOHOL.

The Commissioner of Internal Revenue in his report says that, so far, little if any loss of revenue has resulted from the use of industrial untaxed alcohol, and that the quantity of tax-paid alcohol withdrawn from the warehouse during the last fiscal year was in excess of similar withdrawals during any like period since 1894. He also makes the gratifying announcement that the expenses incident to the administration of the new law have been unexpectedly light. There had been appropriated for the purpose the sum of $250,000, but the actual disbursements have been only $43,-266.76. These included salaries and the expenses of the inspectors, deputy collectors, storekeepers, gaugers, office force, laboratory supplies, etc. Thus two objections to the law have been proved untenable. But, furthermore, the commissioner asserts that few, if any, attempts at fraud have been attempted in connection with the manufacture and distribution of the untaxed spirits.

There were withdrawn from bond for denaturation, according to the report, during six months ended June 30, 3,084,950.8 gallons of taxable spirits, and there were produced 1,397,861.16 gallons of completely denatured alcohol, of which 1,355,763.19 gallons were distributed between manufacturers, wholesalers, retailers and to persons other than registered dealers. The bulk of deliveries from warehouse have been made to the wholesale distributers, but it is estimated that the retail trade, 80 per cent. of which were druggists, distributed 295,670.19 gallons, presumably for domestic uses, or less than .004 gallon per capita at the present estimate of the population of the United States.

Of specially denatured alcohol, for use of manufacturers only, there were shipped from warehouse during the last six months of the fiscal year, 375,-276.94 wine gallons. If we take, therefore, the total shipments of completely and specially denatured alcohol from bond, we find that 1,731,-040.13 gallons were sent into consumption during the six months ended June 30. Of this quantity manufacturers received, in addition to the 375,-276.94 gallons of specially denatured spirits, a quantity of completely denatured alcohol estimated to have been 777,391.38, or in all about 1,152,668 gallons. The figures indicate that there must have been a large amount of stock left on hand in the bonded warehouses, for the quantity of spirits withdrawn for denaturing purposes was 3,084,-950.8 gallons, and the quantity of the denatured product sent out, completely and special, was only 1,731,040.13 gallons, which would leave in warehouse a stock of 1,353,909.67 gallons.

As a comparison, Great Britain is credited with producing during the fiscal year ended March 31, 1906, about 6,800,000 wine gallons, and Germany during the year ended October 1, 1904, with about 37,000,000 wine gallons, of which 10,000,000 are reported to have been used for industrial purposes and 27,000,000 for light and fuel.

The commissioner calls attention to some of the causes why industrial alcohol has not found proportionate favor in this country. For instance, appliances for the domestic consumption of alcohol are yet wanting to a great extent, and the public consequently is not as yet educated to their use. Then there is always the competition with petroleum, which in the case of Germany is minimized by the imposition of an import duty on that product.

The distilling of alcohol for industrial purposes in Germany has taken such a firm hold on the people that there are in that country no fewer than 70,000 farm distilleries producing spirits sold to producers at 27 cents per gallon, as against ten such plants on this side and an average price of about 36 cents per gallon.

PRODUCTION OF NATURAL GAS IN 1906.

Statistics collected by the United States Geological Survey and published in an advance chapter from "Mineral Resources of the United States, Calendar Year 1906," show that the natural gas product of the United States for 1906 amounted to 388,842,562,000 cubic feet measured at the atmospheric pressure, or 9,396,963.8 short tons. Particular interest attaches to these quantitative figures, as they represent the first successful effort to obtain information in regard to the quantity of gas produced, for many small operators have been able to report only the total value of the gas sold.

The value of the gas product for 1906 amounted to $46,873,932, an increase of $5,311,077, or 12.8 per cent., over the value of 1905. This gain was due partly to increased activity in oil exploitation in the mid-continent field, and in even larger part to continued exploitation in West Virginia and Ohio. The average price of $5 per short ton for natural gas is interesting, considering that the corresponding price of bituminous coal in 1906 was only $1.11. The difference is fully made up by the superior fuel efficiency of natural gas, weight for weight, and by the great economy of labor in its use and in the cost of removing ashes.

The number of natural gas companies in the United States decreased from 2,139 in 1905 to 1,871 in 1906. The increase in the distances to which gas is transported tends to the consolidation of the smaller companies faster than new ones are formed.

For years Pennsylvania, West Virginia, Ohio and, more recently, Kansas, Oklahoma and Indian Territory have produced more gas than they have consumed. In 1906 Pennsylvania reversed the conditions and consumed slightly more than her entire product, borrowing from West Virginia to make up the deficiency. New York and Ohio also drew heavily on other states for their supply. This increased pumping of natural gas has tended greatly to the steadying of the industry and to the development of enterprises dependent upon it. The transportation of the gas is so much cheaper than that of coal that the gas competes with coal at comparatively greater distances.

The following tables show the quantity and value of natural gas produced and consumed in the United States in 1906, by states:

GAS PRODUCED IN THE UNITED STATES, 1906.

	Quantity, M cubic ft.	Cents per M cu. ft.	Value
Pennsylvania	138,161,385	13.4	$18,558,245
Ohio	45,436,020	15.7	7,145,809
West Virginia	119,400,392	11.5	13,735,343
Kansas	69,322,633	5.8	4,010,986
Missouri	33,500	21.5	7,210
New York	2,547,769	26.4	672,795

Oklahoma	3,520,396	7.3	259,862
California	153,021	87.9	134,560
Alabama, Louisiana, Texas	1,038,569	14.5	150,695
Illinois	409,556	21.3	87,211
Colorado	23,567	96.7	22,800
Arkansas, Wyoming	120,500	28.6	34,500
South Dakota	22,900	67.2	15,400
Tennessee	2,000	15.0	300
Total	388,842,562	12.1	46,873,932

GAS CONSUMED IN THE UNITED STATES, 1906.

	Quantity, M cubic ft.	Cents per M cu. ft.	Value
Pennsylvania	162,095,173	13.0	$21,085,077
Ohio	74,812,562	16.9	12,652,520
West Virginia	58,455,009	6.3	3,720,440
Kansas, Missouri	69,468,461	5.8	4,030,776
New York	10,182,422	26.0	2,654,115
Indiana	7,861,540	22.2	1,750,755
Kentucky	789,154	36.4	287,501
Oklahoma	3,408,128	7.2	247,282
California	153,621	87 9	134,560
Alabama, Louisiana, Texas	1,038,569	14.5	150,695
Illinois	409,556	21.3	87,211
Colorado	23,567	96.7	22,800
Arkansas, Wyoming	120,500	28.6	34,500
South Dakota	22,900	67.2	15,400
Tennessee	2,000	15.0	300
Total	388,842,562	12.1	46,873,932

The combined value of natural gas and crude petroleum increased from $125,720,254 in 1905 to $139,318,667 in 1906—a gain of over $13,500,000—and was the greatest value ever recorded. Every producing state joined in the gain except Indiana and Colorado. Pennsylvania was still in the lead, followed by West Virginia, while California, first in quantity of oil produced, was sixth in total value.

Capital, Surplus and Undivided Profits - - - $3,766,000

320 Broadway, between Pearl and Worth Sts.

The American Credit-Indemnity Co.
OF NEW YORK.

Capital, full paid, . . . $1,000,000

S. M. PHELAN, President.

CREDIT INSURANCE ONLY.

Credit Insurance is essentially a modern, practical and successful application of collateral to merchandise accounts.

WRITE FOR OUR BOOKLET "COLLATERAL ON MERCHANDISE ACCOUNTS," SENT FREE,

St. Louis, Mo. 302 Broadway, N. Y.

WITH one ribbon and its new three-color device

The New Tri-Chrome Smith Premier Typewriter

is virtually three typewriters in one. It produces indelible black, purple copying or red typewriting at the will of the operator. One ribbon and a small, easily operated lever do it all.

This machine permits not only the use of a three-color ribbon, but also a two-color or single color ribbon. No extra cost for this new model

THE SMITH PREMIER TYPEWRITER CO.
SYRACUSE, N. Y.
